Area Mortality Tables

This report presents an analysis of deaths and death rates from all causes and principal causes of death in a number of geographical sub-divisions and local areas of England and Wales during the period 1959–63. The deaths have been classified to the areas of residence and are related to the populations of those areas as enumerated at the 1961 Census. The tabulations in this volume have been prepared in a form so that they are, as far as possible, comparable with those in the preceding volume, covering the period 1950–53.

EXPLANATORY NOTES

1. New or recent changes in presentation

(a) *Changes in regular tables introduced this year*

Table A1. Population figures for years 1961 to 1967 revised in the light of the 1966 Census.

Table A2. Revised to show single years of age up to 24, and some additional age groups.

Table A3(a). Figures back to 1966, revised in the light of the 1966 Census, are included in **Appendices C1** and **C2.**

Table A3(b). Intermediate years 1911 to 1967 now shown. The section of this table headed 'Ratio of proportion to that of 1911 taken as 100' is omitted.

Table A4. Figures back to 1966, revised in the light of the 1966 Census, are included in **Appendices C3** and **C4.**

Table A6. New table showing population projections for standard regions.

Table B1. Constructed from the estimated populations and deaths in a single year (1968) instead of three years.

Table B2. Revised to show expectation of life at birth and at ages 15, 45 and 65.

Table E. Revised to include infant deaths at ages under 4 weeks and under 1 week, and infant and perinatal mortality rates, and also to distinguish sub-divisions of standard regions.

Table S3(c). New table showing gross migration into and out from the total population of the United Kingdom.

Table V2. Table previously described as **Table V2** is omitted; replaced by table previously described as **Table V3.**

Table V3. Now described as **Table V2**, and revised to show figures for England and Wales separately.

Tables EE(a); FF; GG; JJ; KK(a). Revised to show age-groups from 15 to 44 only.

Table KK(b). Revised to show durations of marriage 5-9 as single years and to show age-groups from 15 to 44 only.

Table QQ(d). New table showing birth order statistics.

Appendix D New table showing estimated home population changes (also published as Appendix I in the *Registrar General's December Quarterly Return*).

(b) *Changes in regular tables introduced in 1967*

Table S1. Previously described as **Table S(a)**, but now excludes the column 'citizens of the Commonwealth and Irish Republic' and all data prior to 1961.

Table S2(a). Previously described as **Table S(c).**

Table S2(b). Previously described as **Table S(d).**

Table S2(c). Previously described as **Table S(e).**

Table S2(d). Previously described as **Table S(f).**

Table S2(e). Previously described as **Table S(g)** but now excludes the sex breakdown and the balances.

Table S(h). Omitted.

Table S2(f). Previously described as **Table S(i).**

Table S3(a). Previously described as **Table S(b)** but now omits the estimates for the calendar years 1962 to 1966.

Table S3(b). New serial table showing total net migration by category of migrant (also published in the *Registrar General's Statistical Review, Part III, Commentary*).

2. Additional tables and data

The following unpublished items are available for reference at the General Register Office, or copies can be supplied on payment:-

(i) Live births and stillbirths separately by sex, legitimacy and month of occurrence for each region, conurbation and local authority area in England and Wales.

(ii) Live births and stillbirths separately by place of confinement, age and parity of mother for each county borough and administrative county in England and Wales.

3. Populations

The estimates of population appearing in this volume and described as 'home', 'total' or 'civilian' have the following content:

Home population - the population, of all types, actually in England and Wales, distributed by area according to residence.

Total population - the home population *plus* members of H.M. Forces belonging to England and Wales and serving overseas but *minus* the Forces of other countries temporarily in England and Wales.

Civilian population - the total population *minus* members of H.M. Forces belonging to England and Wales at home or overseas.

In order not to count either deployment of H.M. Forces between home and overseas stations, or their recruitment or demobilisation, as migration, each intercensal national population estimate starts with the *total* population at the date of the previous estimate. To this is added natural increase and the net result of migration into and out of the civilian population (which may differ slightly from the balance of intending migrants derived from the International Passenger Survey, etc.). This gives the new *total* population. The subtraction from this of all of H.M. Forces regarded as emanating from England and Wales, wherever stationed, gives the new *civilian* population estimate. The addition of non-civilians (whether H.M. Forces or Allied Forces) actually stationed in England and Wales gives the new *home* population estimate. A minor difficulty in equating the difference between two *total* population estimates *minus* the net result of subtracting births from deaths with the precise figure for net migration during the period arises from the fact that provisional figures for births are used at the time population estimates are necessarily made, whereas published figures are usually of actual occurrences. Discrepancies between provisional birth figures and final occurrences are generally allowed for in the estimates for the following year.

4. Births and birth rates

The births recorded and analysed for England and Wales for periods from 1939 onwards are those which *occurred* during the period.

For classification by area (**Tables E, BB,** etc.), births and maternities are assigned to the area of the mother's usual residence if this is within England and Wales; if not, to the area of occurrence.

The national birth rates shown in **Tables D1** and **D2** are calculated by relating birth occurrences to the home population (before 1939, birth registrations to the home population; in 1915-1920, birth registrations to the total population; in 1940-1950, birth occurrences to the total population), except rates by legitimacy per 1,000 married or unmarried women aged 15-44, which are based on total population. The rates in **Table E** are calculated from birth occurrences and home populations (see note 3 above).

5. Deaths and death rates

The deaths recorded (**Tables E** and **SS**) are the total *registered* (including non-civilians) in the calendar period, the time lag between the date of occurrence and the date of registration being usually only a day or two. In general, deaths have been assigned to the area of usual residence of the deceased; if this is not within England or Wales they are assigned to the area of occurrence. Accommodation provided under Parts III or IV of the National Assistance Act, 1948 is regarded as the place of residence of persons dying there. Before 1st January 1958 chronic sick and psychiatric hospitals were similarly treated for this purpose but from that date the method of classification was modified, the main change being that a death in such a hospital is now assigned to the area of occurrence only if the deceased had been there six months or more. If the deceased had been there less than six months the death is transferred to the area of previous usual residence.

In some small areas the numbers of deaths may also have been appreciably affected by the opening, closing or change of use of certain institutions, so that figures may not be comparable with those of earlier years.

In **Table E** the crude death rates are calculated from total deaths and home populations. The infant mortality rates are based on the live births occurring in the year, and the perinatal mortality rates are calculated from the numbers of infant deaths under one week, plus the numbers of stillbirths, per thousand total live and stillbirths.

6. Area Comparability factors

(a) *Births*

The crude birth rates for local areas in **Table E** (col. 8) may not be comparable one with another because the populations on which they are based may contain different proportions of women of child-bearing ages. In order to eliminate differences between local birth rates due to this cause a standardising factor, termed an Area Comparability Factor, is calculated (as described on page 144 of the *1965 Statistical Review, Part III, Commentary**).

The product of the crude birth rate and this Area Comparability Factor (col. 9 of **Table E**) is a rate which makes allowance for this influence. The ratio of this adjusted rate to the rate for England and Wales as a whole is shown in col. 10 of **Table E.**

(b) *Deaths*

The crude death rates for local areas in **Table E** (col. 14) may not be comparable one with another. In the first place, the populations on which they are based may have widely differing structures by sex and age. In order to eliminate differences between local death rates due to this cause a standardising factor, termed an Area Comparability Factor, is calculated (as described on page 144 of the *1965 Statistical Review, Part III, Commentary**). In the second place the populations on which the crude death rates are based may include a disproportionate number of invalids if there are certain types of hospitals in the area. In order to eliminate this difference the Area Comparability Factors are adjusted so that they have the effect of apportioning the deaths and the populations in chronic sick and psychiatric hospitals over all areas of the country according to their non-institutional populations. The product of the crude death rate and this Area Comparability Factor (col. 15 in **Table E**) is a rate which makes allowance for these two influences. The ratio of this adjusted rate to the rate for England and Wales as a whole is shown in col. 16 of **Table E.**

7. Fertility Analyses

All the tables that appear in the **Fertility Analyses** are based upon occurrences with the exception of **Table SS** which is based upon registrations.

One of the changes introduced by part of the Population (Statistics) Act, 1960, which came into operation on 1st January 1961, was that the age of the child's father was required where his name was entered in the register, i.e. where the entry was that of a legitimate birth or of an illegitimate birth registered on the joint information of the parents. The analysis of illegitimate births by father's age in **Table AA(b)**, being thus restricted to those births registered jointly by the parents where the father's age was stated, is therefore incomplete and may be misrepresentative.

The term 'maternity' in these tables is used to denote a pregnancy which has terminated in the birth of one or more live or still born children, and the term 'paternity' a legitimate pregnancy of the man's wife which has terminated in the birth of one or more live or still born children. The maternity record differs from the birth record in that multiple births from a single pregnancy are counted as one maternity, while for the birth record each child born is reckoned as a separate unit. The definition of a stillborn child is given in Section 41 of the Births and Deaths Registration Act, 1953, as follows: 'a child which has issued forth from its mother after the twenty eighth week of pregnancy and which did not at any time after being completely expelled from the mother breathe or show any other signs of life'.

The treatment of 'not stated' cases is explained in note 12.

The following supplementary tables, which were last published in the 1966 volume, are to be published at intervals of several years.

Table AA Supplement 1. Legitimate live births by ages of parents in combination.

Table AA Supplement 2. Legitimate stillbirths by ages of parents in combination.

Table FF Supplement. Legitimate stillbirths per 1,000 legitimate births by ages of parents in combination.

Table HH Supplement 1. Legitimate live births to remarried women by age of mother at birth and the number of her previous liveborn children by all husbands.

Table HH Supplement 2. Legitimate births to all married women by sex, age of mother at birth and the number of her previous liveborn children.

Table HH Supplement 3. Legitimate male births per 1,000 legitimate female births to all married women by age of mother at birth and the number of her previous liveborn children.

Table II Supplement 1. Legitimate live births to remarried women by age of mother at birth and duration of current marriage.

Table II Supplement 2. Legitimate live births to all married women by age of mother at birth and marriage duration.

Table MM Supplement. Legitimate live births to remarried women, at integral marriage durations (in completed years or months) by mother's calendar year of, and age at, current marriage.

8. Divorces

The figures in **Table 01** have been obtained from the Lord Chancellor's Department. **Tables 02** and **P1** to **P7** have been compiled from the records of the Divorce Registry, controlled to the total given by **Table 01.**

9. Register of electors

Table U1, compiled from returns received from Electoral Registration Officers, shows the numbers of parliamentary electors on the February 1968 Register for each parliamentary constituency as constituted at the date of the general election held on 31st March 1966. The number of votes cast at by-elections held on the February 1968 Register have been supplied by the Home Office. The 1961 acreages, which comprise land and inland water, for each parliamentary constituency, have been obtained from the Ordnance Survey Department.

The numbers of votes cast at by-elections held during the first six weeks of the calendar year are shown in footnotes to **Table U1** in the preceding year's volume.

Tables U2 and **U3** are derived from **Table U1** for the current and preceding years, so far as they relate to parliamentary electors.

Table V1, which shows the number of local government electors, the total number of councillors on each council, and an analysis of local elections held in 1967, is compiled from returns received from clerks to local councils. **Table V2** is derived from the same source.

10. International migration

Tables S1, S2 and **S3** show various data derived mainly from the International Passenger Survey, which is conducted by the Government Social Survey Department for the Board of Trade and which obtains information about overseas migration, tourism and the contribution of 'travel' expenditure to the balance of payments. This survey is a stratified random sample of passengers entering and leaving the country on all the principal air and sea routes, *excluding* certain non-approved ports (e.g. Tyne sea ports, which mainly affect Scandinavia, and United States air bases in East Anglia) as well as traffic with the Irish Republic. The term 'migration' here relates to passengers whose declared intention is to reside in, or be away from, this country for a least a year.

On the long air routes nearly 7 per cent of the outgoing passengers and 4 per cent of the incoming passengers are interviewed at London Airport and Prestwick; 2 per cent of the short air route passengers in winter and 1 per cent in summer are also interviewed there. At the smaller airports the percentage sampled varies between half of one per cent and 4 per cent according to the time and the airport concerned. The sample weights are adjusted for known traffic densities, and appropriate allowance made for traffic not covered. On the short sea routes, about 1 per cent of the winter traffic and a half of one per cent of the summer traffic is interviewed. In a two stage sample, cross-channel boats are sampled in proportion to the weight of traffic they are expected to handle, and a pre-determined number of passengers is interviewed on each selected boat. On the long sea routes, every liner or other ship having more than 200 passengers arriving, or more than 100 passengers departing, is covered. One ship in every two of other ships carrying more than 12 passengers on these routes is covered. Nearly 7 per cent of the outgoing and 4 per cent of the incoming passengers are sampled. A larger proportion of passengers leaving this country on the long sea and air routes is sampled in order to provide information about emigration from this country.

The totals obtained by grossing up the sample statistics are subject to sampling error which make the estimates for small categories unreliable.

11. International tables

Information for the completion of **Tables W, X, Y** and **Z** has been obtained from United Nations publications and from official sources.

12. 'Not stated' cases

Where a particular item of information on a record is not known or not stated at registration a specific value is assigned during the early stages of computer processing, as follows:

Births

Births for which the age of mother, age of father, year of marriage or the number of previous children is not stated are assigned the value of the appropriate item from the last case with otherwise similar characteristics to be processed. Notes of the number of cases dealt with in this way are included in the relevant tables.

Marriages

Marriages with the age of one of the parties not stated are assigned a value for that age based upon the other party's stated age, adjusted according to the combined marital condition of the parties. Where the ages of both parties are not stated, the values assigned are those appearing on the last of a sub-sample of previous cases with the same combined marital condition.

Divorces

Not stated age at marriage is assigned a value in a manner similar to marriages. Present age is estimated from age at marriage.

13. Changes in boundaries

Areas which have undergone a change in boundary during the year are identified in **Table E** by an asterisk *: for any such area the statistics shown for the current year represent the events assigned to the area within the boundaries as they existed at the date of the event, and the population given in **Table E** (col. 2), which is used for the calculation of crude birth and death rates, is a weighted average of the mid-year populations of the area as constituted before and after the change. This population figure may therefore differ from any given in **Table A4** for the same region, conurbation, etc., which relates to the area as constituted at mid-year. Newly created areas are identified in **Table E** by the sign †. Statistics of events occurring in the first quarter of 1968 for areas abolished on 1st April 1968 have been included with the areas to which they were transferred on 1st April 1968. Details of boundary changes are given in **Appendix A.**

14. Indication of reliability

Rates given as 0 indicate that the actual rate is less than half of a unit. A dash (-) in any cell indicates that there were no events. Where a cell has been left blank no denominator is available. Rates calculated from less than 20 events are distinguished by italic type as a warning to the user that the smallness of the experience may affect their reliability as a measure.

Numbers

If d represents the deaths in an area and p the population in that area, then, if d/p is small, the standard error (s.e.) of d is approximately $\sqrt{d}$ assuming that the deaths are independent of one another. Clearly, the larger the number of deaths the smaller will be the proportionate variability. A deviation either way of twice the s.e. may be expected about once in 20 times. Using this criterion one might expect towns each averaging 20 deaths per year to yield in the same year numbers ranging between 11 and 29 without such differences having any statistical significance. Alternatively it could be said that if 20 deaths were recorded for a town, this number would have a 95 per cent confidence interval of approximately ±9, there being a 95 per cent chance that the underlying mortality is represented by a number of deaths within this interval.

If d is thought to be an extreme variation it would be more reliable to use as the standard error not $\sqrt{d}$ but $\sqrt{d'}$ where d' is the number of deaths expected if some standard rate (e.g. the national rate) were applied.

Rates

The appropriate standard error of a death rate when d represents the number of deaths and p the population is

$$\frac{\sqrt{d}}{p} \quad \text{or} \quad \frac{m}{\sqrt{d}}$$

where m is the death rate. The difference between two local death rates m_1 and m_2 can be regarded as significant only if it amounts to more than twice the standard error of the difference, viz.

$$2\sqrt{\left(\frac{m_1^2}{d_1} + \frac{m_2^2}{d_2}\right)}$$

Comparison of adjusted rates

Before comparisons are made, other known sources of variation (such as differences in the sex and age composition of the population) must be removed. If C is the local death Area Comparability Factor, then mC is to be compared with m', the national death rate. The s.e. of mC is

$$C\sqrt{\left(\frac{m}{p}\right)}$$

and

$$mC \pm 2C\sqrt{\left(\frac{m}{p}\right)}$$

is to be compared with m'. As already indicated, m' can be used instead of m in the calculation of the s.e. ; m' has the advantage of itself having only a small sampling error.

19. Urban and rural aggregates

These aggregates comprise (a) the six conurbations combined, (b) the aggregates of urban local authority areas outside the conurbations in three groups according to the size of their resident population at the 1961 Census and (c) the aggregate of rural local authority areas outside the conurbations. Urban areas include boroughs and urban districts as defined by the Local Government Acts, and rural areas are rural districts as similarly defined.

21. Hospital regions

The hospital regions presented in this volume consist of aggregations of entire local authority areas. They are identical with the areas of the regional hospital boards except where the boundaries of the latter divide local authority areas. Any such divided local authority area is allocated to the hospital region containing the greater proportion of the population.

Estimates of the population of hospital regions, in which the figures for the parts of divided areas have been allocated to the regions in which they are situated, have been published in the *Registrar General's Quarterly Return* (see return No. 481 for the first quarter of 1969).

TABLE A5. Total population, projections from 30th June, 1968, by sex and age

England and Wales

These projections have been prepared by the Government Actuary's Department in consultation with the General Register Office

Basis: Mid-1968 estimate of the Total population of England and Wales (plus members of H.M. Forces belonging to England and Wales and serving overseas but minus the Forces of other countries temporarily in England and Wales).

Assumptions (1968 Revision):

Deaths: Death rates at the outset based on recent experience. At ages under 40 for males and under 50 for females death rates are assumed to decline over the period of the projection until, at the end of forty years, they are one half or less of the present rates. Above these ages the assumed rates of decline become progressively smaller as the age advances until they vanish at ages over 90. At almost all ages the assumed rates of decline are smaller for males than for females.

Births: The estimates assume 828,000 live births in the year to mid-1969 and a gradual increase thereafter to annual totals of 861,000 to mid-1971, 916,000 to mid-1981, 1,025,000 to mid-1991 and to 1,093,000 to mid-year 2001. The ratio of male to female births has been taken as 1·06 throughout.

Migration: A net inward migration has been assumed of 20,000 in the year to mid-1969, falling thereafter to 16,000 in the year to mid-1971 and thence down to a nominal figure of 1,000 a year from mid-1981 onwards.

Projections involving children yet unborn are shown above the dotted line

These projections, which are 1968-based, are consistent with, and constrained to, the independently-derived projections for England and Wales as a whole, which were prepared by the Government Actuary's Department in consultation with the General Register Office. The migration assumptions incorporated in the projections are as follows:

TABLE B1. Abridged life table, 1968 — England and Wales

Apart from its use as a basis for calculations of probabilities of death or survival, the life table represents one useful way of providing summary indices of mortality free from peculiarities in the sex and age structure of the population. These summary indices, whether it be the number surviving out of the specified number of births or the expectation of life beyond a specified age, are sex and age standardised. They summarise the individual age death rates for each sex. For this particular purpose the following life table has been constructed from the mortality experience of 1968. Though the functions are summary indices of the mortality of a particular year they will by the same token be sensitive to fluctuations in mortality from one year to another as a result of changes in the weather conditions, irregular incidence of epidemics, etc., and they are not reliable as a basis for calculations of the probabilities of survival over a period of years. Life table finctions for use in such computations should be representative of the current level of mortality and should therefore be based on more than one year's experience. For this latter purpose another life table has been constructed based on the three years 1966 to 1968, a larger body of data more representative of the general mortality of recent years; this has been published in the *Registrar General's Quarterly Return* for the June Quarter 1969, No. 482.

This abridged life table is constructed from the estimated *home* population and the total deaths in the year 1968.

The column headed l_x shows for each sex, the numbers who would survive to exact age x out of 10,000 born who were subject throughout their lives to the recorded age death rates of the period.

Column $\overset{o}{e}_x$ is the 'expectation of life', that is, the average future lifetime which would be lived by persons aged exactly x, if likewise subject to those death rates.

TABLE M. Persons marrying in 1968, ages and conditions

England and Wales, standard regions, Wales and conurbations

Note. Figures for conurbations, remainders of regions, and some standard regions are approximate, relating to groups of registration districts most nearly corresponding to the areas defined in the explanatory notes. The mid-1968 home populations of these groups differed from those of the defined areas by the following percentages:

Tyneside Conurbation	+7·07	Remainder of Yorkshire and Humberside	-2·66	Remainder of North West Region	-3·36
Remainder of North Region	-2·38	South East Lancashire Conurbation	+3·79	South East Region	+0·53
West Yorkshire Conurbation	+4·73	Merseyside Conurbation	+0·53	Remainder of South East Region	+2·15
				South West Region	-2·49

Note. The deaths included in this table, as in all tables of the *Statistical Review*, are those which occurred in England and Wales. The numbers which occur outside England and Wales are not generally large enough to be of much significance except for certain years, e.g. for the periods 1914-18 and 1939-47 deaths of non-civilians and merchant seamen which occurred outside England and Wales are estimated at 577,000 and 240,000 respectively.

Notes

1. Tables S3 (b) and (c) relate to civilian migrant movement as an element in change in the 'total' population of the United Kingdom/England and Wales. Deployment of H.M. and Allied Forces between this country and overseas is excluded. Also excluded is a small number of wives and dependants of U.S. Forces entering or leaving the United Kingdom/England and Wales each year by 'non-approved' ports.

2. A migrant is defined as a passenger with a minimum of twelve months' residence in his or her last country of residence who remains for at least a year in the receiving country. The figures of both inward and outward movements therefore cover a number of people spending a limited time in or out of the United Kingdom, e.g. students, doctors, teachers, as well as those moving in or out for permanent settlement. This group will also be reflected in the England and Wales net figures.

3. The estimates of the Alien, Commonwealth and British (U.K.) streams relate to citizenship and are based on the International Passenger Survey, a sample Survey of passenger movements between the United Kingdom and overseas countries, but excluding traffic with the Irish Republic, adjusted in the light of other available information such as the statistics collected under the Commonwealth Immigrants Act. Estimates of movement between the Republic of Ireland and the United Kingdom/England and Wales, which is not measured by the I.P.S. have been derived from data from National Insurance records. The net movement into England and Wales from the rest of the United Kingdom is derived from the records of change of doctor kept at the National Health Service Central Registers.

4. United Kingdom passport holders from East Africa are included in the New Commonwealth stream for the year mid-1967 to mid-1968.

5. Old Commonwealth relates to Australia, Canada and New Zealand; New Commonwealth to the remaining Commonwealth countries.

† Provisional Adoption Orders, which were introduced on 1st April 1959 (see Adoption Act, 1958, section 53) are included in the total. These Orders confer authority on a person not domiciled in Great Britain to take a child out of this country for adoption.
* The number of adopted children usually exceeds the number of Adoption Orders because the High Court does not issue a seperate Order for each child where an adopter adopts more than one child at the same time.

TABLE U1. Parliamentary electors on the February 1968 Register, with number of votes cast at by-elections held thereon

England and Wales, county and borough constituencies

Note 1. The Register of electors 1968 was prepared in respect of the qualifying date 10th October 1967, and came into force on 16th February 1968. The figures are for constituencies as constituted at the date of the General Election held on 31st March 1966. The figures given in columns 6, 7 and 8 relate to persons entitled to vote at elections held on or after 2nd October 1968; they are not included in columns 3, 4 and 5.

2. In this table the symbol * is used to indicate constituencies in which by-elections have been held during the year. Details of the number of votes cast at by-elections are shown at the end of the table.

1 From 1946 to 1949 the death rates are based on civilian population only. From 1950 onwards rates are based on home population.
2 From 1946 to 1949 the birth rates are based on total population. From 1950 onwards rates are based on home population.
3 Revised rates 1961-1967 due to revision of England and Wales population estimates in light of 1966 Sample Census.
4 1946 death rates are based on civilians only.
5 Before 1948 excluding territory ceded by Hungary in 1947.
6 Excluding infants born alive but dying before registration of birth.
7 Federal Republic only, including Saar, incorporated 1st January 1957. Before 1949 including Eltern and Tüddern.
8 Before 1948 excluding Dodecanese. Beginning 1949 rates based on births and deaths which have been adjusted for incomplete geographic coverage. Including armed forces stationed outside the country and excluding alien armed forces within the country.
9 Before 1949 excluding Eltern and Tüddern. Including births occurring outside the country if one or both parents are included in a Netherlands population register. Prior to 1959 excluding data for Amboynese living in camps.
10 Successive territorial changes affect comparability.

11 Before 1950 excluding Yukon and North West Territories and Newfoundland.
12 Births for 1951-1954 and 1956, final tabulations were based on a 50 per cent sample. Before 1959 excluding Alaska and Hawaii.
13 1946-1950 data are estimates based on population enumerated at 1952 Census and death statistics 1945-1952. Beginning 1951 data are births by date of occurrence but include an upward adjustment for under registration of 8.8 per cent for 1951 and 5 per cent for 1952 and 1959.
14 Data are for a changing group of states and territories which, in 1961, included a population of 397 million. Data for 1963-1964 are suppressed because the intercensal computed rates of 41.7 for births and 22.8 for deaths for 1951-1961 are considered to be more reliable.
15 From 1946 Japanese nationals in Japan only. From May 1952 including Tokara Archipelago, and from 1954 including Amami Islands, both acquired from Ryuku Islands in 1951 and 1953 respectively.
16 Excluding full-blooded aborigines.
17 Including Maoris.

* E.g. duration 2 completed years covers the interval from the second wedding anniversary (falling in 1967) to the third (falling in 1968).

† The method of calculating fertility rates within the first year of marriage was revised in 1963. This accounts for the change in pattern of these rates compared with those of the previous years.

TABLE QQ(d). Fertility rates by birth order: live births per woman married once only by duration and calendar year of marriage and number of previous liveborn children

England and Wales

Notes. This table shows rates which are, in fact, probabilities that a married woman, at a given marriage duration, with n previous live born children would have the $(n + 1)$th child during the course of the following year. The rates are obtained as follows:

Suppose the number of legitimate live births after n previous births at a given marriage duration in a given year is denoted by M, and the number of married women at that marriage duration in that year is denoted by W. Suppose further, the number of those among W married women who have had n children is denoted by $W(n)$. Then the birth order rate is given by

$$\frac{M}{W} \div \frac{W(n)}{W} = \frac{M}{W(n)}$$

There is a possible source of error in calculating these rates, which arises from the possibility of having more births of a given order taking place than there are women exposed to the risk of having births of that order. This can happen when some women have more than one maternity (resulting in live born children) in any one year and when there is a multiple maternity resulting in more than one live birth. The chance of this error occurring is less than 1 in 20.

Calculation of women at risk: For women married before 1961, the number at each parity was obtained from the 1961 Census results. For those married in 1961 and onwards, the number at each parity was determined by distributing the estimated total number of married women at duration 0 (obtained from **Table NN**) according to the proportions given in **Table QQ(c)**.

APPENDIX B

Distribution of live births and stillbirths by place of confinement, and age and parity of mother.

In the following tables the categories used for place of confinement are:-

N.H.S. hospital, i.e. hospitals and homes under the National Health Service, except psychiatric hospitals;

Other hospital, which are mainly maternity homes not under the National Health Service;

At home, i.e. at the usual place of residence of the mother;

Other, places of confinement which include all psychiatric institutions, homes for unmarried mothers, remand homes, reception centres, private houses (other than mother's usual residence), etc.

For availability of additional tables see explanatory note 2.

APPENDIX D. Estimated home population changes, mid-1951 to mid-1968

England and Wales, standard regions and Wales, conurbations and sub-divisions of standard regions

Notes. There are differences, mainly for the period after mid-1961, in the estimates and definitions of the elements of population change shown in this Appendix and those published for regions and conurbations in Appendices D and E of the *Registrar General's Quarterly Return* for the 4th Quarter of 1966, Appendix E of the *Return* for the 4th Quarter 1967, in the *Registrar General's Statistical Review of England and Wales, Part III*, 1965; and in the *Abstract of Regional Statistics* for 1966, Table 2, for 1967, Table 3, and for 1968, Table 6. These differences are described below in relation to births, deaths, net migration, boundary adjustments, and to the revisions of the mid-year estimates in the light of the 1966 Census.

Births: from mid-1951 to mid-1961, the statistics of area of birth shown in this Appendix are partly registrations and partly occurrences figures; from mid-1961 to mid-1968 figures relate to usual residence of mother. Figures for the later period, i.e., mid-1961 to mid-1967, shown in the publications mentioned above were on an area of occurrence basis and are therefore not comparable with those in this Appendix. The differences between the estimates of births made on the two bases are generally much less than one per cent of all births in each region and sub-division.

Deaths: the area of death data relating to the period, mid-1951 to mid-1961, are on varying bases. However, from mid-1961 to mid-1968, figures are consistently based on registrations, the deaths in chronic sick and psychiatric hospitals being distributed all over England and Wales according to the deaths in each area, if the deceased had been living in the institution for six months or more. If the deceased had been there less than six months, the death is transferred to the area of previous usual residence. This basis differs slightly from that used in the figures that were previously published in the publications mentioned above, in which the institutional deaths were left where they were registered.

Net migration etc.: this column measures mainly net civilian migration; the other factors included in the column, such as revision to past mid-year estimates of population, are generally relatively unimportant.

Revisions to the mid-year estimates: the estimated populations at mid-1961, mid-1966 and mid-1967 shown in this Appendix are revised in the light of the 1966 Census and therefore differ from those previously published. These revisions are almost entirely reflected in the Net migration etc. item for the whole period, mid-1961 to mid-1966, thereby leaving the previously published natural increase estimates unchanged. (It should be noted that revised annual population change analyses in the period, mid-1962 to mid-1966, and particularly for the year, mid-1965 to mid-1966, cannot be obtained in this Appendix). A fuller description of these revisions will be given in the *Registrar General's Statistical Review, Part III*, 1967.
