EXPLANATORY NOTES

1. New or Recent Changes in Presentation

(*a*) *Change of Practice*

Between the years 1941 and 1956 inclusive infant mortality rates for the local areas in Table **E** are based upon combined births of the associated and preceding year to which they relate.

The infant mortality rates for 1957 are based upon live births occurring in the year.

(*b*) *New and Revised Tables*

In 1952 a new series of tables was introduced for the fertility analyses. Some of these have been further modified in 1955 to 1957. Details are given in Note 5.

A new marriage table (Table **H**) was introduced in 1955 and, from 1954, three marriage tables were extended. Table **H** shows marriage rates by age and marital condition, Tables **K** and **L** now show separate figures for divorced persons, while Table **N** includes ratios of the daily average number of marriages in each calendar month to that of the year.

The marriages of 1957 have been analysed by manner of solemnization in Appendix **B.** This also contains tables of buildings certified for worship and of those in which marriages could lawfully be solemnized as at 30th June, 1957, analysed by religious denomination (Tables **8** and **9**). The figures in these two tables have been extracted from the *Registrar General's Official List* for 1954. They have been amended to take account of subsequent changes up to 30th June, 1957. Similar statistics were last given in the *Statistical Review* for 1952, *Text Volume**, page 52.

The analysis of marriages was last made in 1952 and published in *Part II* of the *Statistical Review* for that year. It is intended to repeat it every five years. It distinguishes civil and religious marriages and religious denomination (Tables **1** and **2**), type of preliminaries (Tables **3** and **4**) and marriages in registered buildings according to whether solemnized before a Registrar or Authorised Person (Tables **5** and **6**). All the tables except Table 7 give figures for England and Wales, Standard Regions and Wales and its two regions. Tables **1** and **2** show in addition Administrative Counties including their associated County Boroughs. Table **7** is a serial record in condensed form corresponding to Tables **1** and **2** and going back to 1844; it relates to England and Wales as a whole.

A new series of tables of divorces has been introduced, replacing the former Tables **P1** to **4.** They analyse the dissolutions and annulments of marriage made absolute during the year according to the following characteristics :—

P1.—Party to whom and grounds on which decree granted.
P2.—Present age of husband and wife (numbers and rates).
P3.—Marriage ages of husband and wife in combination.
P4.—Wife's marriage age and duration (numbers and rates).
P5.—Wife's marriage age and surviving children of present marriage.
P6.—Wife's marriage age and the marital condition of both parties before the marriage in combination.

In addition the present volume contains two supplements to these tables which it is intended to publish only at intervals of several years as more data accumulate, because of their complexity and consequent small cell sizes:—

Supplement to Table **P3.**—Year of marriage and marriage ages of husband and wife in combination.

Supplement to Table **P6.**—Husband's and wife's age at and marital condition before the marriage and calendar year of marriage.

Tables relating to the use made of the indexes and registers of births, marriages and deaths, the re-registration of births of legitimated persons and adoption orders made by the courts were modified in 1955 to include information previously published in the *Commentary* volumes, and renumbered. Table **T1** was extended to include figures of searches undertaken for Government Departments and numbers of certificates issued from the registers. A new table (Table **T2**) shows the numbers of different types of certificate issued. Tables **T3, T4** and **T5** were previously numbered **T2, T3** and **T4.** Table **T5,** showing relationship between adopters and children adopted, no longer distinguishes the types of court which made the adoption orders.

2. Populations

The estimates of population appearing in this volume and described as " home " or " total " populations, have the following content:—

Home population—the population, of all types, actually in England and Wales, distributed by area according to residence.

Total population—the home population *plus* members of H.M. Forces belonging to England and Wales and serving overseas but *excluding* the Forces of other countries temporarily in England and Wales.

The mid-1957 estimates of population, both national and local, have been based upon final figures from the full tabulations of the 1951 Census.

The table of population projections shown in Table **A5** has already been published in the *Registrar General's Quarterly Return for England and Wales** for the December Quarter 1957 (No. 436).

3. Births

The births recorded and analysed for England and Wales for periods from 1939 onwards are those which *occurred* during the period. The numbers *registered* in 1957 are shown in the footnote to Table **B.**

For the classification by area (Table E), the births have been assigned as in previous years to the home address or area of permanent residence.

4. Birth Rates

The national rates shown in Tables **C** and **D** are obtained by relating birth occurrences (before 1939, registrations) to the total population, while the rates in Table **E** are based on birth occurrences and home populations (see Notes 2 and 3 above).

The crude birth rates for local areas in Table **E** (col. 8) may not be comparable one with another. In the first place the populations on which they are based may contain different relative numbers of women of childbearing ages. In order to eliminate differences between local birth rates due to this cause an Area Comparability Factor is calculated (as described on page 30 of the 1954 *Statistical Review, Part III, Commentary*†).

In the second place the crude birth rates for local areas may differ because disproportionate numbers of women of childbearing ages are resident in mental institutions, where they are not, in fact, ' exposed to risk ' of childbearing. In order to eliminate differences between local birth rates due to this cause also, the Area Comparability Factors mentioned in the previous paragraph are adjusted so that they also spread the numbers of women of childbearing ages in mental and mental deficiency hospitals over all areas of the country in proportion to the non-institutional populations.

The product of the crude birth rate and this adjusted Area Comparability Factor (col. 9 in Table **E**) is a rate which is standardised for sex and age structure—in particular for the relative numbers of women of childbearing ages—and, at the same time, makes allowance for the presence in or absence from the area of mental or mental deficiency hospitals with female patients of childbearing ages.

5. Fertility Analyses

The fertility analyses in Tables **AA** to **TT** are based on information obtained under the Population (Statistics) Act, 1938, which operated from the 1st July, 1938. Tables **AA** to **QQ** and Table **TT** are based upon birth occurrences. Tables **RR** and **SS** are based upon death registrations.

A new tabulation scheme was adopted for 1952 and subsequent years, and a fresh series of tables was introduced in the 1952 volume.

Tables **AA** to **EE** are, with a few modifications, similar to the corresponding tables in the previous series. Table **FF** (previously **GG**) includes live and still birth rates per 1,000 legitimate maternities. Tables **RR, SS** and **TT** correspond to those previously designated **VV, XX** and **YY.** The former Table **WW** is discontinued.

Table **GG** shows birth rates by age of mother for Standard Regions, Conurbations and Urban and Rural Aggregates; it also includes legitimacy, sex and stillbirth proportions which before 1952 were given in Table **HH.**

* Obtainable from Her Majesty's Stationery Office, price 2s. net.
† Obtainable from Her Majesty's Stationery Office, price 8s. net.

The analysis of legitimate maternities by mother's age, marriage duration and previous liveborn children in Tables **HH, II** and **LL**, is confined to maternities to women married once only. Table **MM** relates to legitimate maternities to women married once only, distinguishing parity, age and year of marriage for successive marriage cohorts.

Tables comparing the fertility of all married women and of those married once only and more than once respectively, have been published in the 1955 *Statistical Review, Part III, Commentary**.

Tables **JJ** and **NN** show estimates of women married once only, at risk of child-bearing (a) in the calendar year 1957, by current age and marriage duration (Table **JJ**), and (b) between integral durations (wedding anniversaries†) reached in 1956 and 1957, by calendar year of marriage and age at marriage (Table **NN**).

There is a fundamental difference between these two tables. Table **JJ** is needed for the calculation of legitimate maternity rates *per year of risk* (shown in Table **KK**). It gives the estimated *total number of years of married life* spent in the year at the ages and durations shown, and to each cell of the table a married woman contributes only the fraction of a year which she actually spent at that age and duration in 1957. (Most women contributed to several cells.) Table **NN** is needed for the calculation of legitimate fertility rates *per married woman* (shown in Table **OO**). It gives the *mean number of women* at risk at the specified durations who were married in the years and at the ages shown. Since 1956 it has related to the integral duration intervals ended in the year under review, spanning two calendar years of risk; in 1952 to 1955 it related to an integral calendar year of risk spanning two duration intervals.

Table **MM** has been similarly modified in 1957; Table **OO** has been in this form since 1956 and in addition has been adjusted from maternity rates to live birth or fertility rates. It continues Tables 2 (a)—(g) of Appendix A in the 1955 *Statistical Review, Part III, Commentary**. Table **PP** now shows mean family size (liveborn children) at integral durations reached in 1957, and continues Tables 1 (a)—(g) of the same Appendix.

In Tables **AA, HH, II, LL** and **MM**, the " not stated " cases have been proportionally distributed and included with the " stated " cases. Table **QQ** shows the numbers of cases so distributed and the proportions per 10,000 total legitimate maternities. Cases where the number of liveborn, now dead, children was not known by the informant at the registration of the birth have not been treated as " previous children not stated " since the current level of child mortality is sufficiently low to permit it to be assumed without risk of serious error that in these cases there were no such children.

6. Marriage Rates

The national marriage rates of Tables **C, D** and **H** are based upon total populations (see Note 2).

7. Deaths

The deaths recorded (Tables **E, RR** and **SS**) are the total registered (i.e., including non-civilians) in the calendar period, the time lag between the date of occurrence and the date of registration being usually only a day or two. They have been assigned to the area of usual residence of the deceased. The definition of usual residence for this purpose was modified in 1953, the main change being that persons dying in hospitals for the chronic sick and in mental and mental deficiency hospitals were in that year regarded as having been resident in the hospital. Such a change with regard to persons dying in accommodation provided under Parts III and IV of the National Assistance Act, 1948, had already been brought into effect during 1952. The method of classification of chronic sick hospitals for these purposes was slightly modified in 1954 and rates for a certain number of smaller areas may not be comparable with those for 1953.

Areas where it is regarded as probable that the number of deaths has been appreciably affected by the *opening, closing or change of use* of certain institutions, so that the figures are not comparable with previous years, have been marked §.

8. Death Rates

The general death rates of Table **E** are based upon total deaths and home populations. The infant mortality rates for the local areas of Table **E** are based upon live births occurring in the year.

The crude death rates for local areas in Table **E** (col. 14) may not be comparable one with another. In the first place the populations on which they are based may have widely differing structures by sex and age. In order to eliminate differences between local death rates due to this cause an Area Comparability Factor is calculated (as described on page 57 of the 1954 *Statistical Review, Part III, Commentary*‡).

* Obtainable from Her Majesty's Stationery Office, price 11s. net.
† The wedding date itself being duration 0 years.
‡ Obtainable from Her Majesty's Stationery Office, price 8s. net.

In the second place the populations on which the crude death rates are based may include a disproportionate number of invalids if there are certain types of hospital in the area. Since 1953 all deaths in mental and mental deficiency hospitals and most deaths in hospitals for the chronic sick have been assigned to the area of the hospital whether or not the patients had originally been admitted from that area. This practice increases the death rates for areas containing large populations in those types of hospital and (very slightly) decreases the death rates for areas containing no such population. In order to eliminate differences between local death rates due to this cause also, the Area Comparability Factors mentioned in the previous paragraph are adjusted so that they also spread the deaths and the populations in chronic sick, mental and mental deficiency hospitals over all areas of the country in proportion to the non-institutional populations.

The product of the crude death rate and this adjusted Area Comparability Factor (col. 13 in Table **E**) is a rate which is standardised for sex and age structure and, at the same time, makes allowance for the presence in or absence from the area of chronic sick, mental or mental deficiency hospitals.

9. Migration

Table **S** shows various data on migration and balance of civilian passenger movement. Parts (a) and (b) are compiled from Board of Trade returns.

Part (a) shows balance of civilian passenger movement and relates, with certain shown exceptions, to travel by all routes to and from the United Kingdom. Part (b) shows balance of permanent migration and relates to travel by the long sea routes only. The permanent migration balance of part (b) is included in the passenger movement balance of part (a).

In parts (a) and (b) the United Kingdom includes the Irish Republic prior to 1st April, 1923. Inward balances are distinguished by a *plus* sign and outward balances by a *minus* sign.

In part (b) the terms " permanent migration " and " long sea routes " have the following meaning:—

Permanent migration — a declared intention by the passenger to reside for more than a year in the country of destination.

Long sea routes — excluding travel to and from all ports in Europe, which is taken for this purpose as including all Mediterranean islands, all ports in Turkey and all ports in the U.S.S.R. other than those on the Pacific seaboard.

Part (c) shows the intercensal population balance by migration for England and Wales. This is obtained by deducting the excess of births over deaths, the natural increase, from the intercensal increase of population. Net gains by migration are shown by a *plus* sign and net losses by a *minus* sign.

10. Register of Electors

Table **U** shows the number of parliamentary electors on the February, 1957, Register for each parliamentary constituency as constituted at the date of the general election held on 26th May, 1955. The number of votes cast at by-elections held on the February, 1957, Register and the acreage of each parliamentary constituency are also shown.

The numbers of local government electors are shown in Table **V** together with an analysis of local elections.

11. Changes in Boundaries

Areas which have undergone a change of boundary during the year are identified in Table **E** by an asterisk(*); areas created during the year are identified by the sign (†), while areas abolished are indicated by the sign (‡). Statistics shown for the year for such an area relate to the area as constituted in the respective parts of the year before and after the boundary change; in consequence the base population used in Table **E** for the calculation of birth and death rates, which must be a weighted average of the populations for these two parts of the year, will differ from that included in Part **(iii)** of the Appendix and Table **A4** which relate to the area constituted *after* the boundary change.

12. Indication of Significance

Rates based upon less than 20 births or deaths are distinguished by italic type as a warning to the user that the smallness of the experiences may affect their significance (*see* page 9 of the 1936 *Statistical Review Text*).

Rates given as 0 indicate that the rate is less than half the final digit shown. A dash (—) in any column indicates that there were no events.

13. Definition of Areas

London A.C.—Administrative County of London which consists of the City of London (including the Inner and Middle Temples) and the Metropolitan Boroughs.

C.B.—County Borough; **M.B.**—Municipal Borough; **Met.B.**—Metropolitan Borough; **U.D.**—Urban District; **R.D.**—Rural District.

14. Standard Regions

The constitution of the Standard Regions of England and Wales used in this Volume is as follows:—

REGION I
Northern
Cumberland
Durham
Northumberland
Westmorland
Yorkshire, North Riding

REGION II
East and West Ridings
Yorkshire, East Riding
Yorkshire, West Riding

REGION III
North Midland

16. Urban and Rural Aggregates

Urban and Rural Aggregates relate to aggregates of conurbations, and of areas outside conurbations. The latter are sub-divided into (a) Urban Areas with (i) populations of 100,000 and over, (ii) populations of 50,000 and under 100,000 and (iii) populations under 50,000 (for this purpose areas are allocated according to the size of their enumerated population at the 1951 Census) and (b) Rural Districts. "Urban Areas" includes Boroughs and Urban Districts as defined under the Local Government Acts, and Rural Districts are as defined under those Acts.

*Great Britain only; a census was not taken in Ireland until 1821.
†The figures refer throughout to the area which is now Northern Ireland.
‡Mid-year estimates; a census was not taken in Northern Ireland and the Irish Republic in 1921 and 1931.
¶For these years the estimates for all the constituent countries except the Irish Republic are of *Total* population (for definition see *Explanatory Note 2*).

(*Figures in thousands*)

Note.—The estimates of population described as " home " and " total " have the following content:-

Home population — the population, of all types, actually in England and Wales.

Total population — the home population *plus* members of H.M. Forces belonging to England and Wales and serving overseas but *excluding* the Forces of other countries temporarily in England and Wales.

TABLE A5.—Total Population, Projections from Mid-year 1957 by Sex and Age. (These projections have been prepared by the Government Actuary's Department in consultation with the General Register Office on the basis of the under-noted agreed assumptions:)

England and Wales

See Explanatory Note 2.

Basis and Assumptions:—

Basis: Mid-1957 Estimate of Total Population of England and Wales (*including* members of H.M. Forces belonging to England and Wales and serving overseas but *excluding* the Forces of other countries temporarily in England and Wales).

Assumptions (1957 Revision):

Mortality: At ages under 45 death rates declining steadily over the next 25 years until at the end of that period they are about one half of the rates now being experienced. At ages over 45 the assumed rates of decline become progressively smaller as the age advances. It has been assumed that after 25 years the death rates at all ages will remain at the levels then reached.

Natality: In view of recent marriage and fertility experience the assumptions made in the previous projection have been modified. The revised estimates give annual births averaging 710,000 in the first 5 years, 705,000 in the next 10 years and 720,000 thereafter.
(Male/Female ratio 10·6 throughout.)

Migration: Nil.

Projections involving children yet unborn are shown above the dotted line

Note.—The term "Maternity" is used to denote a pregnancy which has terminated in the birth of one or more live or stillborn child(ren), the definition of a stillborn child being that contained in Section 41 of the Births and Deaths Registration Act, 1953. The Maternity record differs from the Birth record in that multiple births from a single pregnancy are counted as one maternity, while for the birth record each child born is reckoned as a separate unit.

TABLE II.—Legitimate Maternities to women married once only by mother's age at maternity and marriage duration.

England and Wales
1957 Occurrences

Note.—(i) The classification by marriage duration now presented differs from that of 1951 and earlier years. As the month only and not the day of the mother's marriage is obtained at a birth registration the marriage duration cannot be exactly identified. The assignment procedure is now designed to secure that numbers shown in the table correspond as nearly as possible to the durations to which they are assigned.

(ii) Cases in which the mother's age or year of marriage were not stated (see Table QQ) have been proportionally distributed and included with the stated cases.

(a) Classification by marriage duration and maternity age in single years.

TABLE RR.—Infertility of Deceased Married Women by Certain Causes of Death.

England and Wales
1957 Registrations

Note.—The columns distinguish deaths according to whether the deceased was reported
(*a*) as having had no children by any husband, i.e. Infertile,
(*b*) as having had children by a husband, i.e. Fertile.
Deaths in which the record of fertility was not reported are excluded from the table.
An asterisk (*) denotes that the total number of cases (infertile plus fertile) was less than 50 and that in view of the unreliability of inferences based on small numbers, proportions have not been calculated. Proportions based on between 50—250 cases are shown in italics.

Internal Migration

A STUDY OF THE FREQUENCY OF MOVEMENT OF MIGRANTS

This study analyses the movements in 1948-50 of a sample of individuals drawn in 1951 from the National Registration records. It shows the number of moves each made during that period and the length of time which elapsed between each move. The figures are presented by sex, age and region of residence.
