

BOARD OF TRADE

# THE REPORT ON THE CENSUS OF PRODUCTION FOR 1958

5 42 [HA 25]

Part 25 DYESTUFFS

Presented by the Board of Trade to Parliament in pursuance of the Statistics of Trade Act, 1947 (10 & 11 Geo.6 Ch.39, Sec.7)

LONDON : HER MAJESTY'S STATIONERY OFFICE 1960

PRICE 1s. 9d. NET

These notes give only the main information which is needed for interpreting the census figures. Fuller explanations are given in a separate booklet of Introductory Notes (Part 1 of the Report on the Census of Production for 1958).

Some changes were introduced in the 1958 they were conducted by a separate company, or by a census, which affect the comparability between 1954 separate department with a separate set of accounts; building and engineering maintenance departments and 1958 figures. were treated similarly. Selling and transport departments were treated in this way both for 1954 Returns in full detail were required only from firms employing 25 or more persons, instead of, as previously, from firms employing 11 or more and 1958. While the effect of including these further ancillary activities was generally to persons. produce higher figures for employment etc., the The coverage of firms' returns for 1958 was in reporting of separate figures for merchanted goods led to the exclusion of some firms who proved to be merchants with only minor productive activities.

many cases rather wider than for 1954. In both years the census was based on the establishment, comprising in most cases the whole of the premises under the same ownership or management at a particu-Changes made for 1958 in the instructions governing the making of returns for two or more lar address (e.g. a factory or mine); but offices, warehouses, laboratories, etc. at addresses separate establishments operated by the same firm permitted from the works were treated as part of the establcombined returns to be made more freely than in ishment. For 1958, but not for 1954, firms were previous censuses. Combined returns were accepted asked to include also, in all sections of their covering establishments in the same census industry, and situated in the same country (i.e. England, returns, particulars relating to merchanting or Scotland or Wales). factoring, canteens operated by them, and other The 1954 figures have been re-tabulated to ancillary activities, such as bottling, packing, and correspond as closely as possible to those for 1958, the manufacture of containers for packing their own but because of the changes described above the products, whether or not these activities were correspondence is not always exact. carried on at the same address as the works, unless

### TERMS USED IN THE CENSUS REPORTS

### CAPITAL EXPENDITURE

The expenditure on new building work shown (iii) Total employment excludes the cost of land and existing buildings This is the sum of the average number of empurchased; for plant, machinery and vehicles both new and second-hand items are included. The value is that charged to capital account during the year, ployees and the number of working proprietors; outworkers are excluded. including any transport and installation cost ENTERPRISE involved. Capital expenditure in respect of estab-The term enterprise is used in this report to mean one or more firms under common ownership or control as defined in the Companies Act, 1948. An enterprise normally consists either of a single firm, or of a holding company together with its

lishments in Great Britain where production had not started before the end of the year is included in Table 1. CHARACTERISTIC PRODUCTS (See the description of the subsidiary companies. method of classification before List of Tables)

### EMPLOYMENT

The number of entries shown in Tables 4, 5 and (i) Working proprietors These include all persons regarded as 'self-7 is the number of returns on which figures against a particular output or production heading were employed' for National Insurance purposes, and recorded. The number of entries is less than the members of their families who worked in the business corresponding number of establishments to the extent without receiving fixed wages or salaries; but that combined returns were made covering more than persons working less than half the normal hours are one of the establishments concerned. excluded.

(ii) Employees

Employees are classified under the two main ESTABLISHMENT In most cases an establishment comprises the headings of (a) administrative, technical and whole of the premises under the same ownership or clerical employees and (b) operatives. The figures relate to persons on the pay-roll (i.e. whose management at a particular address (e.g. a factory or mine). Offices, warehouses, laboratories and National Insurance cards were held by employers), whether full-time or part-time employees. The other ancillary places of business at a separate figures for 1958 include, but those for 1954 address from the works were treated as part of the establishment. exclude, persons engaged in merchanting or factoring, and canteen workers.

Administrative, technical and clerical em-For some industries figures are given showing ployees include managers, superintendents, and works foremen; research, experimental, development, the total quantities made during the year of importtechnical and design employees (other than operaant intermediate products, i.e. products which may be further processed in the establishments in which tives); draughtsmen and tracers; travellers; and office (including works office) employees. they are produced, whether or not they are also sometimes sold. They include also goods produced Operatives include all other classes of emfrom materials supplied by other firms.

ployees, that is, broadly speaking, all manual wage earners. They include those employed in and about the factory or works; operatives employed in power MATERIALS AND FUEL houses, transport work, stores, warehouses and, for The totals shown include the cost of all purchases of materials and components for use in 1958, canteens; inspectors, viewers and similar production, and of fuel (including oil, gas and electricity) for all purposes including heating, workers; maintenance workers; and cleaners. Operatives engaged in outside work of erection, lighting and transport (where carried out by firms' fitting etc. are also included, but outworkers (i.e. own staff included in the return); all packing persons employed by the firm who worked on materials

### NOTES

### CHANGES IN THE 1958 CENSUS

supplied by the firm in their own homes, etc.) are excluded.

### ENTRIES

### INTE RMEDIATE PRODUCTS

materials, including the full cost of returnable cases and containers when first purchased; workshop materials; office materials; water charges; materials for repairs to firms' own buildings, plant and vehicles when carried out by their own workpeople included in the return; consumable tools; and parts for machinery purchased during the year as replacements. Purchases of goods for merchanting or factoring, and canteen supplies, are included for 1958 but not for 1954. Materials supplied by customers for processing are excluded for both years. The values shown include any duty paid (less

rebate, etc.) but exclude trade discounts allowed. The cost of transport was included only if included in the cost of materials as invoiced; amounts paid to transport organisations, including firms' own separate transport organisations, for delivery of materials and fuel are therefore excluded. Materials purchased overseas were entered at their c.i.f. cost plus any duty if the cost of transport from the docks was not included in the invoiced price, and at their full delivered cost if invoiced 'carriage paid home'.

### NET OUTPUT

The net output of an industry represents the value added to materials by the process of production and includes for 1958 the gross margin on any merchanted or factored goods sold; it constitutes the fund from which wages, salaries, rents, rates and taxes, advertising and other selling expenses, and all other similar charges have to be met, as well as depreciation and profits. There is no appreciable duplication in net output.

Net output was normally obtained by taking the total value of sales and work done (including, for 1958, the value of merchanted goods sold and canteen takings); adding the value of stocks at the end of the year and deducting their value at the beginning of the year; and deducting also the cost of materials and fuel purchased (including, for 1958, the value of goods purchased for merchanting and canteen supplies), payments for work given out to other firms, and payments for transport. The net amount of duty paid was deducted, and the net amount of subsidy received added.

### NET OUTPUT PER PERSON EMPLOYED

The figures for net output per person employed are derived by dividing net output by total employment (see above).

PRINCIPAL PRODUCTS (See the description of the method of classification before List of Tables)

### SALES

Sales include goods made by the business covered by the return, those made for it by outworkers or by other firms from materials given out to them (sometimes described as goods made on commission), and waste products sold. Any machinery or other capital items produced for use in the business covered by the return are also included, the value being that adopted in the firm's capital account for income tax purposes. Goods sold without being subjected to any manufacturing process (merchanted or factored) and canteen takings are included for 1958 but not for 1954; where the total sales of merchanted or factored goods were less than £5,000, firms were permitted to include them with the figures for sales of goods of their own production

The value shown for sales is the net selling

### SYMBOLS USED

The following symbols are used throughout the reports:

- .. for not available
- for nil or negligible (less than half the final digit shown)

value, defined as the amount charged to customers whether on an ex-works or delivered basis, net of any trade discounts, agents' commissions, allowances for returnable cases, purchase tax, etc.; the net amount charged for packing materials is included. Goods charged on a delivered basis to customers overseas, are included at the f.o.b. value. For work done on commission or for the trade, the value shown is the net amount charged. With a few exceptions, receipts for business and other services are not included.

To the extent that the finished products of one establishment constitute the materials purchased by another, total figures of the value of sales (and of materials and fuel purchased) include an element of duplication.

### STOCKS AND WORK IN PROGRESS

The values shown are the income tax values of stocks of products on hand for sale, and of materials and fuel, at the beginning and end of the year of return. For 1958, but not for 1954, they include any stocks of goods held for merchanting or factoring. The value of work in progress at the two dates is also usually shown. This excludes any progress payments made to subcontractors, and no deduction is made on account of progress payments received.

### TRANSPORT PAYMENTS

These represent the total amount paid or credited during the year for both outwards transport of finished goods sold and inwards transport of materials and fuel purchased. They include payments to other firms, and to any separate transport organisation of the same firm, not covered by the return, but exclude the value of transport services provided by the business covered by the return. The items included are payments for hired cartage and for inwards and outwards carriage by all forms of inland transport, that is railways, road haulage, canals, coast-wise shipping, air, etc. Payments made for sea freight on goods sold to customers overseas and on materials and fuel purchased from overseas suppliers are excluded.

### WAGES AND SALARIES

These are the amounts paid during the year to operatives and to administrative, technical and clerical employees. Payments to working proprietors, whether called salaries or not, are excluded. The values shown include all overtime payments, bonuses and commissions, whether paid regularly or not, and no deduction is made for income tax, insurances, contributory pensions, etc. The value of any payments in kind, travelling expenses, lodging allowances, etc. is excluded.

Figures are also shown for average salaries etc. paid per head for the week ended 25th October, 1958. For staff paid monthly, the figures are based on payments made in October, 1958. Where payments related to periods other than a week or month, an appropriate proportion was returned. Only those bonuses and commissions actually paid in the period are included.

### WORK GIVEN OUT

The figures shown represent the total amount paid for work done by other firms on materials supplied to them, and also by firms' own establishments for which separate returns were made. They do not include payments to individual outworkers or payments for business and other services.

### BOUNDING OF FIGURES

The figures in the tables have, where necessary, been rounded to the nearest final digit. There may, therefore, be apparent slight discrepancies between the sums of the constituent items and the totals shown.

ii

# The Report on the Census of Production for 1958

This report on the Dyestuffs Industry relates to establishments engaged in the manufacture of synthetic dyestuffs, including dyestuff intermediates, vegetable dyes and tanning extracts. Confectioners' colours are excluded.

The industry corresponds to minimum list heading 271 (1) of the second (1958) edition of the Standard Industrial Classification, which has been used for the first time in the 1958 Census. The definition of this industry is unchanged from the last detailed Census of Production, for 1954, in which it was reported on as Industry 2B under the title Dyes and Dyestuffs.

For 1958, returns in full detail were required only from firms employing twenty-five or more persons and most of the tables in this report relate only to these larger firms. This is an important change from previous censuses when returns in full detail were required from firms employing eleven or more persons on productive work. Estimates for the industry as a whole are given in Table 1.

The figures given for 1954 correspond as closely as possible to those collected for 1958 but the correspondence is not exact, especially in respect of the small firms who gave only limited information. Some other changes introduced in the 1958 census also affect the comparability between 1954 and 1958 figures; these are explained in the notes prefacing this report.

There were no establishments in this industry in Northern Ireland in 1954 or in 1958.

This industry is defined in terms of its 'principal products' which are those shown in Table 4. A census return was classified to this industry if the sales of the principal products of this industry accounted for a greater proportion of its output than the principal products of any other industry. Where, however, the application of this rule would have resulted in a change of classification between 1954 (on the revised basis) and 1958, the return was classified to the same industry as for 1954 unless the output of principal products in the new industry was one third more than in the old; this modification of the general rule was designed to avoid discontinuities as the result of marginal changes of output between the two censuses. Sales of merchanted products and of non-specific items such as waste products, work done and canteen takings were not taken into account in classifying returns.
