## **Report on the Census of Production**

# Introductory notes

#### Special Note for Purchasers

Commencing with the 1971 Census, the Census of Production reports are being numbered in a uniform series embracing all industrial inquiries in the Business Monitor series. These Business Monitors have a code P (for production) followed first by A (indicating that it is an annual series) or Q (quarterly) or M (monthly): and then by a number indicating the minimum list heading, or sub-division of a minimum list heading, of the Standard Industrial Classification (revised 1968).

The Census of Production (PA) reports are available on standing order (details on application to Her Majesty's Stationery Office, P.O. Box 569, London SE1 9NH. Telephone 01-928 6977), although they are not included in the global subscription arrangements for the Business Monitor series.

#### **Government Statistical Service**

A service of statistical information and advice is provided to the Government by specialist staffs employed in the statistics division of individual Departments. Statistics are made generally available through their publications and further information and advice on them can be obtained from the Departments concerned.

Coverage

## I GENERAL OUTLINE

INTRODUCTION

1. The Report on the Census of Production for 1976 comprises 166 separate Business Monitors in the PA series:

Introductory notes	PA1001
164 industry monitors	PA101-PA603
Summary tables	PA1002

Provisional estimates of some of the principal results for 1976 with comparative data for 1973–1975 were published in Business Monitor PA1000.

For the construction industry, the special notes included in PA500 should also be consulted.

2. Censuses of Production are taken annually for Great Britain by the Department of Industry's Business Statistics Office (BSO) under the Statistics of Trade Act, 1947 and for Northern Ireland by the Department of Commerce, Belfast, under the Statistics of Trade (Northern Ireland) Act, 1949. The information collected separately for Northern Ireland is included in the United Kingdom totals published in the Business Monitors.

3. The Census of Production for 1976 is the seventh in the annual series, which forms part of a system of industrial statistics which was mainly brought into operation between 1970 and 1973. The rest of the system comprises selected monthly inquiries into manufacturers' sales, orders and production, quarterly inquiries into the product sales of manufacturing industries and less frequent inquiries into additional subjects including details of purchases of goods and services by industry.

4. The Census for 1976 is in line with similar inquiries being conducted in other member countries of the European Economic Communities (EEC). The co-ordination of these annual inquiries into industrial activity is achieved by a directive (72/221) of the Council of the European Communities. Results are provided to the Statistical Office of the European Communities on the General Industrial Classification of Economic Activities within the European Communities (NACE). Data from the censuses of production are also used in the United Kingdom to meet the requirement of an earlier EEC directive (64/475) on capital expenditure.

#### BURDEN OF FORM FILLING

5. Proposals for all Government statistical inquiries are scrutinised very carefully to ensure that it is necessary to seek the information and that it is sought in an economic manner. The Survey Control Unit in the Central Statistical Office considers all proposals for new statistical inquiries and any changes to existing inquiries. To reduce the burden of form filling many smaller firms are either excluded from the annual censuses altogether or receive a shorter form. The BSO accepts reasonable estimates where contributors find it difficult to provide exact figures.

6. The subjects to be covered for the Censuses for 1973– 1976 were decided after consultation with the Census of Production Advisory Committee appointed under the Statistics of Trade Act, 1947. This Committee includes members from industry, the trade unions, the accountancy profession, universities and the public services. A list of members is given on page 20 of these notes. Additionally, for the construction industry the Standing Consultative Committee on Construction Statistics of the National Consultative Council for the Building and Civil Engineering Industries was consulted in respect of 1976.

#### OBJECTIVES

7. The main objective of the series of annual censuses is to provide summary information about the structure of industry in the United Kingdom, which will be useful to industry,

economic analysts and Government alike and to facilitate international comparisons with other member states of the EEC. The censuses make possible the comparison of the characteristics of an industry either between years or with other industries in the same year.

#### **CHANGES COMPARED WITH 1975**

8. Separate monitors are being published for the first time for the following industries:

PA	.333.1	Pumps
PA	333.2	Valves
PA	.333.3	Compressors and fluid power equipmen

#### COVERAGE

9. The Census for 1976 covered some 34 thousand establishments in the United Kingdom. The Channel Islands and the Isle of Man were excluded. Estimates for over 70 thousand exempted establishments are included in the results. The construction industry for 1976 covered some 88 thousand undertakings, of which 78 thousand were small units represented by a sample.

10. The Census covered United Kingdom establishments engaged in manufacturing, mining and quarrying, construction, electricity, gas and water supply (Orders II to XXI of the Standard Industrial Classification (revised 1968), (SIC)).

11. Establishments (defined in paragraph 13) with fewer than 20 employees were exempt. The standard length form was used for establishments with 100 or more employees, with a shorter form for establishments with 20 to 99 employees. A specimen of the standard form is included at Part VIII. Each establishment is classified to an industry, as defined in the SIC, whose principal products form the major part of the establishment's sales. In the construction industry, where firms employing fewer than 20 persons account for a relatively high proportion of total employment and output, a sample was taken of undertakings with fewer than 20 employees.

#### INDUSTRIAL CLASSIFICATION

12. The United Kingdom SIC was first issued in 1948 and revised in 1958 and 1968. It exists to promote uniformity and comparability in the official statistics of the United Kingdom. The general principles followed are those of the International Standard Industrial Classification of all Economic Activities of the United Nations Statistical Office but the United Kingdom SIC reflects the organisation and structure of industry and trade as it exists in the United Kingdom. The SIC is a classification by activity and is not a commodity classification. However, an index of all commodity headings for which sales data are provided in the Quarterly Business Monitors is published in Business Monitor PQ1000.

#### STATISTICAL UNITS

The statistical unit for the purpose of the Census is the 13. establishment which is defined in the SIC as the smallest unit which can provide the information normally required for an economic census, for example, employment, expenses, turnover, capital formation. Usually the principal activities carried on in an establishment fall within a single heading of the classification (e.g. steel making or sugar refining). Typically the establishment embraces all the activities carried on at a single address e.g. a farm, a mine or a factory, including those which are ancillary to the principal activities. Frequently distinct activities characteristic of different industries are carried on at one address, but normally these are not classified separately and the whole establishment is classified according to the main activity. If, however, the required range of data can be provided for each activity, each is taken to constitute a separate establishment. Sometimes activities which are conducted as a single business are carried on at a number of addresses. Where this is so, businesses are asked to provide the full range of separate information in

T OF INDUSTRY REPORTS	15–19
BERS OF THE ADVISORY COMMITTEE	20
CENSUS OF PRODUCTION (1977)	
TURNS) ORDER, 1976	21
CIMEN CENSUS FORM	22–32

respect of each address, whether or not the activities are different. Their activities may, however, be integrated to such an extent that they constitute a single establishment. In the latter case the establishment is defined to cover the combined activities at these addresses (termed local units). Separate figures are obtained of employment and net capital expenditure at each unit in order to compile regional tables.

14. Efforts are made by the BSO to ensure, by negotiating with respondents, that the return from an establishment does not cover local units or addresses in more than one of the countries of the United Kingdom.

15. Further information about the statistical unit appeared in an article "The statistical unit in business inquiries" in Statistical News No. 13 May 1971.

16. Establishments are asked to exclude from their returns particulars relating to any department not engaged in production e.g. merchanting, transport, warehousing, for which they keep a separate set of accounts. Transfers of goods produced to such departments are treated as sales and respondents are asked to value them as far as possible as if sold to an independent purchaser. Where separate accounts are not kept they are asked to include details of all these activities in their return.

17. Particulars relating to head offices mainly engaged in the administration of the production units within the scope of the census were included. Where more than one return was made the information in respect of the head office was apportioned among them.

18. For certain purposes in the annual censuses of production (especially the enterprise analyses of Business Monitor PA1002) related establishments are combined. For these purposes an enterprise group may be defined as a buisness consisting of either a single establishment or two or more establishments under common ownership or control. Bringing together establishments into enterprise groups is also necessary for the purpose of ensuring that there will be no disclosure of the activities of any one enterprise group. Information about the relationship of establishments, the changing structure of groups of companies and about common ownership links is obtained from many sources, including the Stock Exchange Year Book, company reports, press reports and information supplied by individual establishments.

#### PERIOD COVERED

19. Establishments were asked to make returns in respect of the calendar year but a return for a business year ending on any date between 6 April 1976 and 5 April 1977 was accepted. An analysis of the periods covered for 1976 is shown in Table 6 in each industry monitor. Returns covering less than twelve months were accepted in those cases where businesses had started or ceased trading during the year. The figures of total sales may differ from comparable annual totals published in the Quarterly (PQ) Business Monitors. In the quarterly inquiries, an establishment makes returns on a calendar quarter (or near calendar quarter) basis.

#### SUPPRESSION OF INFORMATION RELATING TO INDIVIDUAL UNDERTAKINGS

20. Section 9(5)(b) of the Statistics of Trade Act 1947 states – "The following provisions shall have effect with respect to any report, summary or other communication to the public of information obtained under the foregoing provisions of this Act –

in compiling any such report, summary or communication the competent authority shall so arrange it as to prevent any particulars published therein from being identified as being particulars relating to any individual person or undertaking except with the previous consent in writing of that person or the person carrying on that undertaking, as the case may be; but this provision shall not prevent the disclosure of the total quantity or value of any articles produced, sold or delivered; so, however, that before disclosing any such total the competent authority shall have regard to any representations made to them by any person who alleges that the disclosure thereof would enable particulars relating to him or to an undertaking carried on by him to be deduced from the total disclosed."

21. If a figure involved disclosure the contributor concerned was sometimes asked to give permission for its publication. In the majority of cases permission was given. When it was refused and where contributors were not approached the figure has been suppressed, either by combining it with other figures, or as in the regional tables, by omitting the figure altogether.

#### FORM OF BUSINESS MONITORS

22. A Business Monitor is published in respect of each industry separately distinguished in the 1976 Census; in some cases the industry monitor will contain a set of tables for the industry together with another set for a broader sector of industry. Each industry monitor is prefaced by a brief description of the activity of the industry — where necessary an account is given of any non-standard features and any changes which affect comparability between the years 1973–1976. Each industry monitor includes the essential notes for interpreting the census figures and also a list of all the Business Monitors which form the complete Census Report. Business Monitor PA1002 summarises information contained in the industry monitors at establishment level, together with enterprise analyses.

23. As in previous annual censuses, respondents were asked to state whether or not they were willing to have the name and address of the business included in a Classified List of Businesses. The consents given have permitted the preparation of a Classified List of Manufacturing Businesses. Arrangements can be made for the List to be supplied on magnetic tape in ICL 1900 format. For the systems other than the ICL 1900 the pu chaser would have to arrange the necessary conversion. Further information about the Lists may be obtained from the Librarian, Business Statistics Office, telephone (Newport 0633) 56111, ext 2973.

#### SYMBOLS USED

24. The following symbols are used throughout the PA series of Business Monitors:

- not available
- nil or less than half the final digit shown
- figures cannot be shown owing to the risk of disclosing information about individual enterprises
   R revised

#### ROUNDING OF FIGURES

25. Figures in the tables have, where necessary, been rounded to the nearest final digit. Where figures have been so rounded, the sum of the constituent items may not always agree exactly with the total shown.

The American American and the second formula many and the second state of the second s

#### II METHODS USED

Department of Employment. One benefit of using this information is an improvement in the estimates of the number of smaller establishments and enterprises, but there is little effect on other aggregates (e.g. employment, output, net capital expenditure).

#### COLLECTION OF DATA

35. For each annual census the computer produces from the register a list of establishments within the scope of the census. Questionnaires are despatched to each establishment on this list after the end of the year to which the census relates.

The receipt of all returns is recorded by the computer as 36. soon as possible so that reminders are not sent to those contributors who have provided information. Computer generated reminder letters are sent at intervals to establishments which have not submitted a return. For the 1976 Census reminder action was taken in May, July and September, 1977. If reminders fail to produce a response establishments whose figures are of particular importance to an inquiry ("Key" Contributors) are sent telex messages or telephoned. Every effort is made to persuade establishments to provide returns promptly and visits are paid to late or non-responding key contributors. Persistent non-responders are sent a final cautionary letter after a suitable period and if this fails to elecit a response the matter is referred to the Departments' legal advisors. Section 4 of the Statistics of Trade Act, 1947 provides penalties for offences relating to returns.

37. Returns are given a preliminary clerical scrutiny to ensure that the information they contain is sufficiently clear and complete for computer processing. In the course of processing a census, more than half a million items of information go through a series of computer tests. These check the completeness of the return, the credibility of the figures and the internal consistency of the return. Information which passes these tests is recorded on magnetic tape and provides the basis for further processing. Information which fails the tests is printed out for clerical checking. Any queries which may have arisen as a result of desk examination are investigated and resolved - in consultation if necessary with contributors - after which the amended or authenticated data is again passed to the computer to be recorded.

#### ESTIMATION

38. All published census results (described in paragraph 1) include estimates for non-respondents, unsatisfactory returns and establishments with fewer than 20 employees, which are not required to make returns. Estimates are also made for items not covered on the shorter form sent to smaller establishments.

39. For two employment size groups in each industry, the computer estimation system calculates ratios of totals returned to total returned employment, thus deriving "average per head" values. The products of these ratios and the last known employment of each non-responding or exempted establishment yield estimated value for that establishment. Estimates of items not collected on the shorter form are made in a similar way using returned employment. Derived items are calculated for each establishment. The end result of this estimation process is the creation of a data file containing estimates with separate values for each item in respect of all establishments included in the census. For a limited range of data estimates are also made in respect of local units of multi-unit establishments.

#### AGGREGATION

40. The main establishment analyses are obtained by aggregating the values held on the data file for each establishment. These basic tabulations are supplemented by analyses of the data accumulated within enterprises (Business Monitor PA1002) and analyses based on local units. Strict checks are made to ensure that no disclosure of information relating to individual enterprise groups arises.

PA 1001

disposed of. The value is that charged to capital account during the year of return.

business), and the amounts receivable for freeholds or leaseholds

c. Plant, machinery and vehicles

The items shown are the value of plant and machinery and of vehicles acquired, both new and second-hand, and the amount received for items disposed of during the year. The value of plant and machinery acquired includes plant, etc. which firms produced for their own use in connection with the business covered by the return. The value of plant, etc. acquired is the expenditure charged to capital account during the year of return less any discounts received, but including the cost of transport and installation. Deductible value added tax is excluded but non-deductible value added tax on motor cars acquired is included. No deduction is made for depreciation, amortization or obsolescence. The proceeds of items disposed of during the year exclude amounts written-off for items scrapped.

#### COST OF INDUSTRIAL SERVICES

54. This includes amounts payable to other firms for work done on materials supplied by the establishment, payments for repairs and maintenance (including those in respect of rented buildings) and amounts paid to other firms for contracts which have been sublet. Payments to outworkers are excluded.

#### COST OF NON-INDUSTRIAL SERVICES

This includes rent of industrial and commercial buildings, 55 hire of plant and machinery, commercial insurance premiums, bank charges and amounts paid for professional services, post office services, transport, advertising etc. Amounts payable on royalties for the right to use patents, trademarks, copyrights etc., manufacturing and quarrying rights and technical "know-how" are also included.

#### **GROSS OUTPUT**

In the calculation of gross ouput the value of total sales 56. and work done is increased by the rise (or reduced by the fall) during the year in the value of work in progress and goods on hand for sale.

#### NET OUTPUT

Net output, a customary census measure, is calculated by 57 deducting from gross output the cost of purchases (reduced by the rise, or increased by the fall, during the year of stocks of materials etc.) and the cost of industrial services received, and where applicable, duties etc.

#### NET OUTPUT PER HEAD

The figures of net output per head are derived by dividing 58 the net output by the average number of persons employed (full and part-time) on all activities covered by the returns, including operatives, administrative, technical and clerical employees and working proprietors, but excluding outworkers.

### GROSS VALUE ADDED AT FACTOR COST

Gross value added at factor cost is calculated by 59. deducting from net output the cost of non-industrial services (e.g. rent of buildings, hire of plant and machinery, commercial insurance premiums, bank charges and amounts paid for professional services, post office services, transport and advertising), rates (excluding water rates) and the cost of licensing motor vehicles. This estimate of gross value added approaches more closely than census net output to the definition of net output or value added in national accounts statistics.

#### GROSS VALUE ADDED AT FACTOR COST PER HEAD

The figures of gross value added at factor cost per head 60. are derived by dividing the gross value added by the average number of persons employed (full and part-time) on all activities covered by the returns, including operatives, administrative, technical and clerical employees and working proprietors, but excluding outworkers.

#### PURCHASES

61. Purchases include the cost of raw materials, components, semi-manufactured goods and workshop materials; of replacement

48 Transfers between establishments within an enterbased on the general instructions given to respondents as to the way in which returns were to be completed. In some industries prise group are recorded in the same way as sales to an t was found necessary to amend or supplement the general independent purchaser. nstructions in order to fit the special circumstances of the paricular industry. Where these supplementary instructions affect

Figures for net output and gross value added are e. adjusted to a factor cost basis by deducting the net amount of all taxes, duties, levies, subsidies, etc.

#### CONGRUENCE WITH QUARTERLY INQUIRIES

44 As far as possible the figures collected from individual establishments in the annual censuses are congruent with those collected in the quarterly inquiries into manufacturers' sales (see "Guide to short term statistics of manufacturers' sales" PQ1001 in the Business Monitor series). There are, however, some differences which are described below.

45 If a change in the reporting structure of a company or in the way it keeps its accounts occurs during the year, this change is reflected during that year by the quarterly inquiries. The figures reported to the annual census for the whole year are generally based on the structure of the company at the end of the year

46 Because annual returns can be accepted from establishments for their business year, they may differ from the aggregation of four quarterly returns for a calendar year. Although in some cases figures for individual establishments may be up to 9 months out of phase, these differences usually tend to cancel out at industry level. There can also be differences between the information establishments provide guickly for the guarterly inquiries and the information for the annual census which often comes from audited accounts.

There are three other differences usually of a minor 47. nature. Firstly, canteen takings are excluded from the quarterly inquiries but they are collected in the annual census of production. Secondly, quarterly inquiry sales figures do not have to be adjusted for cash discounts, quantity rebates and allowances for returned goods, as these may not be known at the time of completion of the questionnaire and cannot always be apportioned between products. They are, however, reflected in the annual census figures. Thirdly, more small firms are exempt from the quarterly inquiries than from the annual census.

6

parts and consumable tools not charged to capital account; of packaging materials of all types; of stationery and printed matter; of fuel, electricity and water; of materials to be used by the establishment or given out to other establishments for the production of machinery or other capital items for the establishment's own use; of materials for use by the establishment when working on goods supplied by customers; and of food, etc. for any canteen covered by the establishment's return. Transfers of goods to the establishment from another department of the same firm not covered by the establishment's return are included at a cost corresponding to the estimated selling value recorded by the other department. Amounts payable to transport firms or credited to the firm's own transport department for delivery of materials are excluded, as are all purchases of machinery and plant charged to capital account. Purchases of goods for merchanting or factoring have been collected separately since 1973. The values shown exclude VAT They include in addition to the actual purchase price, the value of packaging material charged to the establishment. The value of returned goods or packaging material returned to suppliers and any trade discounts are excluded. Materials purchased duty-paid are included at their duty-paid value, less any drawback, rebate, etc. The cost of transport is included only if it is included with the purchase price in the firm's accounts. Imported goods are included at their full delivered cost. If in the firm's accounts the transport from docks or airport is not included in the cost of goods purchased, the cost is entered at c.i.f. plus duty (if applicable). Leasing, renting and

## hire purchase charges are excluded. **SALES OF GOODS PRODUCED**

62. Sales for the purposes of the annual censuses means deliveries on sale of goods made by establishments in the United Kingdom covered by the inquiry. Sales of goods made for these establishments by outworkers or by other establishments from materials given out to them and sales of waste products are included. New building work and machinery or other capital items produced by establishments for hiring out or leasing are regarded as sales, the value included in the return being that adopted in the establishments' capital asset accounts. Forward sales and canteen takings are excluded. All sales in the period of the inquiry are included irrespective of when the goods were manufactured.

63. Goods produced in one establishment and transferred either to ancillary departments not engaged in production for which there are separate accounts, or to another establishment of the same firm not covered by the return, are treated as sales by the producing establishment and valued as far as possible as if they had been sold to an independent purchaser. Goods transferred to wholesale or retail selling organisations, for which separate accounts are kept are valued on the same basis.

64. The value shown for sales is the "net selling value" defined as the amount (excluding value added tax) charged to customers whether on an ex-works or delivered basis, after any trade discounts and agents' commissions have been deducted. The cost of packing materials less allowance for returnable cases is included. In industries where products attract Excise Duty the value stated is usually inclusive of duty if sold duty-paid and exclusive of duty if sold in bond or exported.

#### WORK DONE AND INDUSTRIAL SERVICES RENDERED

65. Figures for work done represent the amount charged for work carried out on materials supplied by a customer and include repair work. Within certain industries this heading covers a wide variety of activities, for example, within the food sector – butter packed on commission; within the textile industries – making up of garments, fur dressing and textile finishing; within printing and publishing – preparatory work on type-setting, block making and binding. Work done is also significant in the electrical machinery and heavy engineering industries, covering erection, installation and repair and jobbing work. Other activities within this heading include exploration work, research and development, glass cutting and dressing and planing of timber.

66. Industrial services rendered include repairs and maintenance, installation work, and technical research and studies for other organisations. CAPITAL GOODS PRODUCED FOR ESTABLISHMENTS' OWN USE

PA1001

67. This includes all work of a capital nature carried out during the year by the establishments' own staff for their own use.

#### NON-INDUSTRIAL SERVICES RENDERED

68. This includes rents received for commercial and industrial buildings, amounts charged for hiring out plant, machinery and other goods and amounts charged to other organisations for the provision of transport. It also includes amounts received for the right to use patents, trademarks, copyrights etc., manufacturing and quarrying rights and technical "know-how" and revenue from such staff facilities as canteens.

#### GOODS MERCHANTED OR FACTORED

69. Merchanted goods are those (excluding canteen sales) sold without having been subjected to any manufacturing process by the seller.

#### STOCKS AND WORK IN PROGRESS

70. Values are given of stocks of goods on hand for sale and of materials, stores and fuel, at the end of the year of return and of the change during the year, including any stocks of goods held for merchanting or factoring.

71. Work in progress is defined as materials which have been partially processed by the establishment but which are not usually sold or transferred to another establishment without further processing. The values include the cost of materials consumed and labour used, together with a margin of overhead costs and profits. Progress payments made to sub-contractors are excluded and progress payments received from other organisations are not deducted.

#### WAGES AND SALARIES

72. These are amounts paid during the year to operatives and to administrative, technical and clerical employees. Payments to working proprietors, whether called salaries or not, are excluded. The values shown include all overtime payments, bonuses and commissions, whether paid regularly or not, and no deduction is made for income tax, insurances, contributory pensions etc. The value of redundancy payments less any amounts reimbursed from Government sources is included. The value of any payments in kind, travelling expenses etc. is excluded.

#### REMUNERATION PAID TO OUTWORKERS

73. The remuneration paid to outworkers (i.e. persons employed by the establishment who do their work in their own homes) is generally on a piece-work basis. Only amounts paid to outworkers whose names appear on the establishment's payroll are included. Amounts paid to outworkers by sub-contractors are excluded.

#### EMPLOYERS' INSURANCE AND WELFARE CONTRIBUTIONS

74. This item includes employers' contributions to national insurance and graduated pensions (and/or earnings related basic contributions under the Social Security Act, 1973) as well as commercial insurance premiums to provide pensions, superanuation or other retirement benefits, sickness benefits, personal accident benefits, disability or death benefits for employees or former employees or their dependants.

75. Contributions to the running costs of canteens, social centres, children's and holiday homes, etc. for employees, former employees and their dependants are also included.

#### VII THE CENSUS OF PRODUCTION (1977) (RETURNS) ORDER, 1976

Section 8 of the Statistics of Trade Act, 1947, requires that an Advisory Committee should advise on the preparation of the forms and instructions necessary for the taking of a census; and of advising with regard to such matters as may be referred to it. The following list gives the names of the current members of the Advisory Committee on the Census of Production, appointed for a period of three years from 1st January 1976, and the name of the organisation to which they belong.

Mr R Ash (Chairman)	Business Statistics Office	
Professor A D Bain	University of Strathclyde	
Miss S P Carter	Central Statistical Office	
Mr C A Davies	Membrain Limited	
Mr D R Glynn	Confederation of British Industry	
Mr G F Regan	Iron and Steel Statistics Bureau	
Mr J Hanna	Trade Union Congress	
Mr C D Hughes	Renold Limited	
Mr A M Millwood	John Laing Construction Limited	
Dr B Mitchell	Business Statistics Office	
Mr W A Newsome	Association of British Chamber of Commerce	
Mr A L Waddams	SRI International	
Mr J D Wells	Department of Industry	
Mr A Wilson FCA	Price Waterhouse and Company	
The Hon G H Wilson	The Delta Metal Company Limited	

The joint secretaries of the Committee are Mr W T Osborn and Mrs M F Haworth of the Business Statistics Office, Cardiff Road, Newport, Gwent.

#### STATUTORY INSTRUMENTS

#### 1976 No. 1801

#### STATISTICS OF TRADE

#### The Census of Production (1977) (Returns) Order 1976

Made	28th October 1976
Laid before Parliament	5th November 1976
Coming into Operation	31st December 1976

The Secretary of State, in exercise of powers conferred by sections 2 and 11 of the Statistics of Trade Act 1947(a) (hereinafter referred to as "the Act") and now vested in him(b) and of all other powers enabling him in that behalf, hereby orders as follows:—

#### Citation, commencement and interpretation

**1.**—(1) This Order may be cited as the Census of Production (1977) (Returns) Order 1976 and shall come into operation on 31st December 1976.

(2) The Interpretation Act 1889(c) shall apply to the interpretation of this Order in like manner as it applies to the interpretation of an Act of Parliament.

#### Matters to which returns may relate

2. The matters about which a person carrying on an undertaking may be required to furnish returns for the purposes of the Census of Production being taken under the Act by the Secretary of State in 1977 shall be all the matters set out in the Schedule to the Act, as amended(d).

28th October 1976.

#### *Eric Varley*, Secretary of State for Industry.

IN CONFIDENCE

**ANNUAL CENSUS OF PRODUCTION FOR 1976** 

Dear Sir(s)

Under Section 2 of the Statistics of Trade Act, 1947, you are required to complete this form and return it to the Business Statistics Office. In accordance with the Act all information supplied in this return will be treated as confidential. Please forward your completed return to this office not later than 31 March 1977 or within three months after the end of your business year.

Yours faithfully

hu C. Francy

M C FESSEY Director

#### PURPOSE OF THE CENSUS

The details from your return will be aggregated with those obtained from other establishments to provide summary statistics describing the structure and development of industry. These include a measure of the contribution made by each industry to the national and regional product; statistics of investment in stocks and of capital expenditure; and statistics of wages and salaries and output per head. The results of the Census will enable detailed comparisons to be made between and within industries (e.g. by size of firm and region) and with industry in other member countries of the European Economic Community which are conducting similar inquiries. In general, the results will provide a basis for judgements to be made about industrial development and the impact of Government policy.

The Census has been discussed with the Advisory Committee on the Census of Production appointed under the Statistics of Trade Act, 1947.

#### PUBLICATION OF RESULTS OF THE CENSUS

A Business Monitor (PA 1000), containing provisional results for the 1975 Census, is to be published early in 1977. Business Monitors in the PA series have been published giving results of the 1972 Census for 155 industries. Business Monitors for the 1973 Census are in the course of publication. Details of these publications may be obtained from the above address or telephone number.

22

	<ul><li>(a) the unit named on the front of this form;</li></ul>
	(b) the units named in any attached list; and
	(c) additional units which have commenced production during the year and have been in production for 3 months or more
	Other forms should only be combined with this form by prior agreement with the Business Statistics Office, and this is possible only when the establishments concerned are in the same industry and the same country (England, Scotland or Wales). If the rendering of a combined return is, or has previously been, agreed it is essential that a breakdown of detail is recorded, as appropriate, for each column in Section B1.
	Forms addressed to other units, which it has been agreed may be included in a combined return, should be marked with the
	reference number of the return in which they have been included and sent with the completed return to the Business Statistics Office.
2.	HEAD OFFICES. If there is a Head Office and its staff are mainly engaged in the administration of the production units
	covered by this return, details of the Head Office should be included in this return. If your Head Office is mainly engaged in administering production units for which two or more separate returns are being made, please arrange in concert with your
	Head Office for the apportionment of its details between returns. If your Head Office is not mainly engaged in the administra tion of production units its details should be excluded from all sections of the return. (For example, ensure that Head Office costs are not reflected in your value of total sales and work done).

IMPORTANT: PLEASE READ THESE NOTES BEFORE COMPLETING YOUR RETURN

irv

A - GENERAL NOTES

PA1001

laboratories and other ancillary departments, selling and transport departments, departments engaged in packaging or manufacturing containers for your own use, building and engineering maintenance departments, and canteens operated by you) should be <u>excluded</u> from all sections of the return. If however, there are some non-production activities which CANNOT be excluded (for example, because no separate records are kept) then include details of these activities in all applicable sections of the return.

4. VALUES. All amounts should be to the nearest £ thousand.

5. ESTIMATION. Although the information you are asked to provide is of a kind that is generally readily available from your accounts there may be cases where estimation is necessary. For instance, where completion of the return would be considerably delayed because your accounts are not finalised, we would ask that you give reasonable estimates; estimates should also be given where figures of accounting accuracy are not available. Whilst credibility checks on returns will ensure that no distortion of census figures will result from the provision of unreliable estimates, the use of estimates where exact figures are not available makes possible the prompt rendering of returns and, therefore, the provision of timely results.
