General footnotes

(a) The censuses of 1959 to 1962, 1964 to 1967 and 1969 were taken on a "business unit" basis, i.e. relating to the whole of a business - a company or group of companies. Where, however, a firm was engaged in a number of quite different census activities, separate returns were required for each main activity. The information was first collected in 1959 and that year's results were used as a framework for the sample censuses of the following years. It was confined mainly to particulars of stocks and work in progress and capital expenditure, supplementing similar information provided quarterly by voluntary contributors whose contribution accounted for about two thirds of the final results. Figures obtained from the establishment based censuses for 1963, 1968 and 1970 have been adjusted to a comparative "business unit" basis. Prior to 1968 figures have not been adjusted to accord with the SIC (Revised 1968) but a limited analysis on the revised basis has been included in the accounts of national income and expenditure published annually by the Central Statistical Office.

(b) Including estimated figures for firms that were not required to make returns and for unsatisfactory returns.

As defined in the SIC (Revised 1968).

(d) Capital expenditure on new building work and acquisitions less disposals of plant, machinery and vehicles; capital expenditure at establishments not yet in production is included. Acquisitions and disposals of land and existing buildings, available only at 'all manufacturing industries' level, is tabulated below.

Land and existing buildings

| Year | Acquisitions | Disposals |
|------|-----------------------------------------------------------------|-----------------------------------------|
| | £ million | £ million |
