Productivity Prices and Incomes Policy

In the White Paper PRODUCTIVITY PRICES AND INCOMES Poucy in 1968 and 1969 published recently (Cmnd 3590. HMSO or through any bookseller, price 1s. 9d. net) the Government confirms its intention of introducing legislation to replace and extend powers relating to the delaying of pay and price increases under the sections of the Prices and Incomes Act 1967 (see MINISTRY OF LABOUR GAZETTE, June 1967, page 475) which will expire on 11th August next.

The new powers in the proposed Bill will, the White Paper states:

lengthen the maximum delaying power on price and pay increases to 12 months in the context of reference to the National Board for Prices and Incomes;

require reductions in existing prices where this is recommended by the NBPI.;

moderate and phase housing rent increases;

require notification of dividend increases, and prevent excessive distributions.

These powers will be sought for eighteen months, with provision for renewal should this prove necessary.

All these powers will be held in reserve, and will be used only to the extent necessary where the voluntary arrangements are not being properly observed. The notification arrangements for price, pay and dividend increases will be on a voluntary basis provided that they operate satisfactorily.

Full support of this policy for productivity, prices and incomes will enable the opportunities in the new situation after devaluation to be seized and so ensure the basis for a lasting improvement in living standards for the whole community.

Pointing out that there is now a real basis for putting the balance of payments into substantial surplus and paying off debts abroad, the White Paper states that over the next two years it is of paramount importance for the national economic strategy after devaluation to raise productivity and efficiency and to obtain substantial restraint from all sections of the community to keep incomes more in line with the expected growth of national output and prevent them rising with the cost of living.

The Government's firm intention is to continue the development of the policy for productivity, prices and incomes to the fullest extent practicable on a voluntary basis, in consultation with the Confederation of British Industry and the Trades Union Congress.

The new feature of the policy will be a ceiling of 3½ per cent. on wage, salary and dividend increases. But the Government wishes to encourage agreements which genuinely raise productivity and defficiency, thereby helping to stabilise or reduce prices, and the policy provides for an exception to the ceiling for such agreements.

All increases in pay, or other significant improvements will need to be justified against the criteria and considerations of the policy. The ceiling will be applied as an annual rate: thus if in a particular case the criteria permit an increase, and more than a year has elapsed since the pay of the particular group was last adjusted, the ceiling on any such increase will be correspondingly higher than 3½ per cent., though large increases will still need to be staged. The ceiling is intended to apply to increases in rates or scales of pay which may apply to the time worked, or to units or work or output, or to a combination of both, and to other elements having regard to the effect on earnings. This means that it should cover increases in basic pay rates and allowances (including basic pay scales or ranges), rates for overtime, night or shift working, etc. Improvements in fringe benefits, normal or standard hours or holiday entitlement must also be taken into account for the purpose of applying it. It is not intended to be applied to increases in earnings which are due to necessary increases in hours worked or in the amount of work done.

There will be increases, the White Paper notes, in earnings under payment by results systems resulting directly from increased output. Changes in payment by results systems, and changes within such systems, including changes in piecework rates, bonus rates or standard times, should not, however, result in higher earnings unless they can be justified on grounds of increased effort or other direct contribution towards increasing productivity from the employees concerned. It is expected that the forthcoming report of the NBPI on payment by results will offer guidance on the application of incomes policy to these systems of payment.

Changes in rates or scales may be settled at national, local, firm or plant level, but where groups benefit from increases or improvements settled at more than one level, the application of the ceiling requires that the overall increase should not exceed $3\frac{1}{2}$ per cent. In considering increases settled at national level account must be taken of probably increases at local, company and plant level; conversely, increases in rates settled at the plant level should take account of relevant increases settled at other levels.

Where a settlement covers the pay of one or more groups of workers, or a wage or salary structure is considered as a whole, the ceiling should be applied to the settlement as a whole, thus permitting flexibility of adjustment of rates within the group or structure.

Over the next two years the criteria contained in Cmnd. 3235 (see MINISTRY OF LABOUR GAZETTE, April 1967, page 398) will continue to apply. They will need to be applied firmly, and should be read in conjunction with the following considerations, and where appropriate with the reports of the NBPI.

It is of continuing importance to encourage increased productivity and efficiency, and so help stabilise or reduce prices, and priority will continue to be given to increases which are justified under the productivity criterion. Reorganisations of wage and salary structures which can be justified on grounds of economic efficiency and increased productivity may be justified under this criterion. There may also be productivity agreements or major reorganisations of wage and salary structures which, as exceptions, justify above-ceiling increases.

There will be an exception to the ceiling for agreements which genuinely raise productivity and increase efficiency sufficiently to justify a pay increase above 31 per cent. The guidelines laid down by the NBPI in their report No. 36 on "Productivity Agreements" (see MINISTRY of Labour Gazette, June 1967, page 474) provide the basis for determining the justification for such increases. Major reorganisations of wage and salary structures which can be justified on productivity and efficiency grounds may also qualify for this exceptional treatment.

It will be necessary to ensure that increases under the low pay criterion are confined to low paid workers. Low paid workers will be able to benefit up to the ceiling if their claims satisfy this criterion. Moreover, there can be above-ceiling increases for low paid workers under a settlement which, though covering a wider group of workers, is within the ceiling. In addition the purpose of the new arrangements for family allowances is to ensure that help is given specifically to low paid workers with two or more children.

The criterion justifying increases on grounds of comparability needs to be applied selectively, and must not be used to spread pay increases into areas of employment where the original justification does not apply.

The criterion justifying pay increases on manpower grounds is retained, but there is a growing acceptance on both sides of industry that the most effective way of remedying a labour shortage is to use existing manpower more efficiently.

The ceiling and the criteria which have been described do not apply to existing arrangements for increasing pay with age, as with apprentices or juveniles, or by means of regular increments within a fixed range or scale, or progressions based on added experience, increased responsibility or special effort, or to increases resulting from promotion to work at a higher level, whether with the same or a different employer. It would be contrary to the policy for posts to be regraded without proper justification as a means of raising pay.

Pay increases based on a rise in the cost of living are not justified under the criteria, and should not be conceded. Not only would this be self-defeating since it would result in further increases in costs and prices, but it could set off a wage-price spiral that would damage our competitive position. Cost of living sliding scales are of diminishing importance in industry, and pay increases resulting from such existing arrangements should be taken fully into account in applying the ceiling to the pay of the group covered.

The period which should elapse between the operative dates of successive settlements should be at least twelve months.

The application of the ceiling, the White Paper adds. should considerably reduce the number of cases where large increases are justified, but they may still occur where a much longer interval than 12 months has elapsed since the previous increase or improvement. The need to consider staging in such cases will be particularly important now that the majority of workers will be able to receive only limited increases.

It is intended that the existing early warning arrangements on pay claims and settlements will continue and consequently information about them whether at national, local, company or plant level will still be needed. While all settlements are subject to the requirements of the policy, the information to be submitted under the early warning arrangements relates to claims and proposed settlements which might be significant (for example, because of the nature of the claim, or the possible repercussions on the pay of other groups) and, in any case, to all those involving more than 100 workers.

The information about claims should specify the nature and terms of the claim, the proposed date of implementation, the number and category or workers covered. and the date and terms of the previous settlement covering this group of workers. The notification should also include an assessment of the justification for the proposed improvement against the criteria and considerations set out in the White Paper. The information about proposed settlements should give details of the way in which the ceiling has been calculated and applied.

Many individual salaries and other forms of remuneration, including that of company directors and executives, are fixed outside the usual process of collective bargaining, The principles of incomes policy should however be applied equally to them as to other forms of income. The Companies Act of 1967 has provisions concerning the disclosure of the remuneration of directors and executives.

The incomes and scales of charges and fees of selfemployed persons, including all forms of professional fees, are expected to conform with the policy. The Government has referred to the NBPI the remuneration of solicitors, and architects' costs and fees. The board's report on solicitors' remuneration was published in February (see MINISTRY OF LABOUR GAZETTE March 1968. page 218) and its recommendations are being considered by the Government.

The White Paper also sets out the criteria and considerations to be applied in dealing with increases in prices, dividends, rents and rates. It points out that the work of the NBPI and its role as an independent statutory body in furthering the objectives of the productivity, prices and incomes policy will be of increasing importance.

The Government will continue to exercise the statutory powers in relation to prices and pay through the process of reference to the board. The board has been strengthened to enable it to deal with an increased volume of work covering the expected increase in post-devaluation prices and incomes references, and it will be further strengthened if this should prove necessary. In consultation with the CBI, the TUC and other interested bodies, the Government will continue to refer to the board appropriate cases relating to the application of the productivity, prices and incomes policy and matters of longer term importance to the policy.

Training for Office Supervision

All firms with office staff face the problems of training those at all levels who have responsibility for supervising such staffs. This problem has been examined by the Central Training Council's Commercial and Clerical Training Committee, which, in its report published recently (Training for Office Supervision. HMSO or through any bookseller, price 2s. net), recommends that grants by industrial training boards to firms training office supervisors should be subject to certain conditions.

The committee recommends that to be eligible for grant a firm's training of office supervisors should cover the following

that the responsible manager has drawn up a specification of the supervisor's job derived from a job analysis, and that this specification has been agreed by both the supervisor and manager; that there should be evidence of a system of regular appraisal of training needs in the light of performance:

that, as a general rule, firms claiming grant for external courses should have a policy of internal training supervised by a senior manager and carried out according to a considered programme; and that firms are able to produce adequate records to show that their approach to the training of office supervisors follows broadly the path outlined in the report.

It is recognised that in the case of small firms which employ an office supervisor some appropriate simplification of these conditions for grant should be allowed.

Another recommendation is that training boards should provide or support seminars to which firms may send senior managers for intensive instruction in the kind of approach the report recommends. The aim should be to ensure that there is at least one manager in a firm capable of developing sound training schemes for office supervision. The importance of the manager's personal contribution to the training of the office supervisor is emphasised. At present, many firms are ill-equipped to work out the training programmes suggested, and many companies need assistance in carrying out systematic and thorough analysis of supervisory jobs and the appraisal of training requirements.

In training for office supervision, two main objectives are

to examine the steps which a company should take to improve the quality of office supervision by the establishment of a systematic and rational training policy; and

to consider the ways in which the industrial training boards can assist companies in this task.

The report focuses on the needs of those currently responsible for office supervision, whether they have been recently appointed or have some experience in the job. The reason for this is simple: probably only a small minority of those at present exercising supervisory responsibilities have had formal or systematic training for their jobs. Although it is desirable and important for companies to select and prepare promising young clerks for supervisory positions, there is no doubt that the more urgent task is to improve the performance of those already in these positions. This will not be easy, for a number of reasons.

In the first place the supervisor cannot easily be spared for extended training away from his job. Secondly, the needs are as various as the job: there is no standard training programme or general course which will give each man or woman the skills and knowledge he or she requires. The only effective approach is

to plan the training to fit the individual. Thirdly, the person who is already in a supervisory position may feel—although wrongly that the suggestion that he should be trained is a reflection on his performance as a supervisor. Managers concerned have, therefore, to "sell" the idea of being trained to people with perhaps little enthusiasm for it.

These three considerations have strongly influenced the recommendations in the report. For example, the major emphasis must be on development on the job complemented by carefully selected, short, intensive courses directed to clearly defined objectives. It also emphasises the importance of the manager working out with his supervisors programmes which are seen to be relevant to their needs—programmes which develop naturally from joint discussion of the jobs and responsibilities of the supervisor. The Commercial and Clerical Training Committee are convinced that this is the only effective way of establishing training for office supervision.

Again and again the committee's attention was brought back to the problems of the smaller organisation or company. There are few businesses of any size which could justify running regular full-time formal training courses at supervisory levels and fewer still which could make such provision for office supervisors alone. But in the small company there are extra difficulties. There may be no personnel or training specialist to advise the management; and the managers themselves will often feel ill-equipped to give systematic training to the office supervisors under them. Again the small firm will not easily be able to release, say, its chief clerk for courses lasting several weeks. The smaller the firm, the larger is the gap created by the absence of a senior or experienced member of staff.

It would be unrealistic not to recognise these difficulties, just as it would be defeatist to let them justify inaction. What the report proposes will make substantial demands on those firms large or small—which have not thought it necessary or possible to develop office supervisors systematically. But the committee does not think its approach will put the smaller organisation at a particular disadvantage. Even the smallest firm can be expected to move in the direction suggested given the support of the training boards' advisers or of other organisations.

No doubt to begin with, the boards will recognise genuine efforts to meet the standards proposed, even if the results leave something to be desired. The important thing is that firms should establish training schemes in the right way. If the general direction of their efforts is right—if the methods and objectives are sound—that is what really matters.

The essential steps in developing training for office supervision are dealt with, together with job analysis and specification. Guidance on assessing how well the supervisor does his job and what help he needs to improve is also given.

Dealing with training programmes, the report considers training requirements, implementation, the role of the supervisor's manager, the use of external courses, and co-operation with colleges. In the appendices examples are given of a job specification, a training appraisal form for office supervisors, a course operating in a large company, the Ministry of Labour's Training Within Industry course for office supervisors, and a list of organisations providing courses on office supervision.

Statutory Wages Regulation in 1967

Wages and conditions of workpeople in Great Britain are normally settled by negotiation between employers' associations and trade unions. Because of the absence of effective negotiating machinery in some trades, however, statutory regulation has been found to be necessary, and for about 3½ million workers, chiefly employed in road haulage, retail distribution and catering, the Wages Councils system provides a means for safeguarding standards of pay and holidays with pay. Each of the 57 Wages Councils now operating under the Wages Councils Act 1959 is an autonomous body, consisting of three independent members, and employers' and workers' representatives in equal numbers. The councils submit proposals for minimum remuneration and holidays with pay to the Minister of Labour, who is required by the Act to give legal effect to these proposals by wages regulation orders enforceable at law.

The Commission of Inquiry set up in 1966 to advise the Minister of Labour on the desirability of abolishing the Hair, Bass and Fibre and Brush and Broom Wages Councils (see MINISTRY OF LABOUR GAZETTE, April 1967, page 297) published its report in December 1967. The commission did not recommend immediate abolition of the councils, but urged employers and workers in the industries in question, particularly the employers, to co-operate in setting up joint negotiating machinery, with a view to making, within three years, a joint application for the abolition of the Wages Councils. The Minister accepted the recommendations of the commission and offered to assist in the setting up of voluntary machinery. (MINISTRY OF LABOUR GAZETTE, December 1967, page 974.)

In March 1967 the Minister gave statutory notice of his intention to abolish the Cutlery Wages Council. Twenty objections having been received, the Minister appointed, in August, a Commission of Inquiry to examine the question of abolition. (MINISTRY OF LABOUR GAZETTE, September 1967, page 719.) Several meetings of the commission have been held, and its report is expected later this year.

Wages regulation orders

In 1967, 64 new wages regulation orders became effective. Most of the orders increased the minimum wage rates, 10 involved a reduction of working hours, and 28 varied the holiday or other

No proposals were referred back to councils by the Minister as a result of prices or incomes policy, or otherwise. In accordance with the prices and incomes policy criteria for the period of severe restraint in the first half of 1967 (MINISTRY OF LABOUR GAZETTE, December 1966, page 816), the increase in the minimum rates due to take effect in March 1967 under the Stamped or Pressed Metalwares and the Pin, Hook and Eye, and Snap Fastener Wages Regulation Orders were deferred to 2nd July 1967 by Orders made under Section 31 of the Prices and Incomes Act 1966.

At the Minister's request the White Paper Prices and Incomes POLICY AFTER 30TH JUNE 1967 (Cmnd 3235) (see MINISTRY OF LABOUR GAZETTE, April 1967, page 295) was placed on the agenda of Wages Councils meetings following its issue in March

The Retail Drapery, Outfitting and Footwear Trades Wages Council was asked by the Minister to consider the report on its proposals, published in March 1967 by the National Board for Prices and Incomes. (See MINISTRY OF LABOUR GAZETTE, April 1967, page 297). The council submitted the proposals as published without amendment, and an Order was made to give effect to them from 22nd May 1967.

A notice setting out the Government's view that increases should not be paid to workers already receiving more than the new minimum rates, beyond what might be necessary to avoid distorting an existing wages structure based on individual responsibility, merit or performance, was sent from May 1967 onwards to all employers affected by new wages regulation orders increasing statutory minimum rates.

Employers of Wages Councils workers may be granted permits, under Section 13 of the Wages Councils Act, to pay rates below the statutory minimum to individuals who are handicapped. Thirty-two new permits were issued, 110 were renewed and 86 were cancelled during 1967.

Inspection and Enforcement

On 31st December 1967, 150 Wages Inspectors, including 27 women, operating from centres in the Ministry's seven regions in England and from centres in Scotland and Wales, were employed full-time on visiting employers' premises, making routine inspections and investigating complaints.

Statistics of inspection and enforcement are:

	1966	1967
Establishments on Wages Council lists	507,625	503,267
Complaints received	8,254	8,880
Inspections	51,108	49,729
Establishments which paid arrears of remuneration (including holiday		de la
remuneration)	9,598	9,958
Workers whose wages were examined	282,757	264,115
Workers to whom arrears were paid	15,720	13,940
Amount of arrears paid	£183,666	£181,946

Civil proceedings were taken against three employers and judgement obtained for payment of arrears of wages and holiday remuneration amounting to £71 8s. 11d.

Baking Industry (Hours of Work) Act 1954

This Act, which restricts night working in the baking industry, applies to all bakery workers except women and young persons (whose hours of work are controlled by the Factories Act, and whose employment during the night is prohibited).

Bakers covered by an approved voluntary agreement regulating night work may be granted under section 9 exemption from the main provisions of the Act. On 1st October 1967 there were 10,204 bakeries in scope of the Act, of which 2,339 had been exempted under these arrangements.

The Act is enforced by the Wages Inspectors of the Ministry who are empowered to enter premises, to examine and copy records, to examine workers and employers and to institute proceedings for any offence under the Act. Inspections were made in 1967 at 956 bakeries, including 188 exempted under section 9 and one complaint was investigated. Failure to comply with the provisions of the Act were disclosed at 21 day bakeries and 18 night bakeries. No prosecutions were taken under the

Quarterly Statistics of Total **Employment**

Great Britain

The estimated numbers in the working population in September 1967 were 16,474,000 males and 8,982,000 females, a total

Between June and September 1967, there was an increase in the working population of 134,000, including 86,000 males and 47,000 females. There were increases in civil employment of 44,000 males and 33,000 females. After adjustment for normal seasonal variations, there was an increase in the working population of 88,000, including 76,000 males and 12,000 females; the numbers in employment increased by 53,000, including 47,000 males and 6,000 females.

In the twelve months from September 1966 to September 1967 the working population decreased by 221,000 including 96,000 males and 126,000 females, The number in employment decreased by 420,000, including 263,000 males and 157,000 females.

The numbers in the main categories, the seasonally adjusted figures and the changes since September 1966 and June 1967 are given in table 1.

Standard Regions

The numbers in the main categories of the civilian labour force in each Standard Region in September 1967 are given in table 2 and the changes since September 1966 and June 1967 in tables 3 and 4.

As explained on page 207 of the March 1968 issue of the GAZETTE, because of changes from quarter to quarter in the numbers of national insurance cards exchanged by employers centrally in regions different from those in which the persons are employed, the regional estimates for September are not so reliable as those for June. The September 1967 estimates are, therefore, provisional and subject to revision when June 1968 estimates are available. Revised September 1966 estimates published in the present issue of the GAZETTE (page 293) have been used in calculating changes between September 1966 and September 1967.

Between June and September 1967, civil employment increased by 48,000 in the South East and 27,000 in Yorkshire and Humberside Regions and by 29,000 in Scotland. There were reductions of 21,000 in West Midlands, 16,000 in East Midlands and 13,000 in South Western Regions. Part of these changes are attributable to seasonal variations: seasonally adjusted figures, however, are not available.

In the twelve months from September 1966 to September 1967, there were decreases of 93,000 in the number in employment in the South East Region, 79,000 in North Western and 57,000 in West Midlands Regions.

Correction

The total civilian labour force estimates shown in table 101 of the March 1968 issue of the GAZETTE should be amended to read March 1967, "24,864", and June 1967 "24,905".

* The Great Britain figures include Civil Servants stationed outside the United Kingdom and the regional figures have been rounded individually so regional figures do not add up to the national figures.

† The number of employers and self-employed are assumed to be unchanged.

Note.—Because of changes from quarter to quarter in the numbers of national insurance cards exchanged by head offices etc. in regions different from those in which the persons are employed, the regional estimates for September are not so reliable as for June. They are therefore provisional and subject to revision when June 1968 estimates are available—see page 207 of the March 1968 GAZETTE.

(103128)

ESTIMATED NUMBERS OF EMPLOYEES IN EMPLOYMENT, JUNE 1967: REGIONAL ANALYSIS

The March 1968 issue of this GAZETTE (table 3 on pages 212–214) showed the estimated numbers of employees in employment in each industry in Great Britain at June 1967. Corresponding estimates for each standard region are given in table 1. Between June 1966 and June 1967 the industrial classifications of many establishments were corrected. Table 3 (col. 2) in the March 1968 issue of the GAZETTE also gave revised estimates for Great Britain for June 1966 i.e., obtained by including the estimated net effect of reclassification of establishments which were previously

incorrectly classified. Corresponding corrected estimates for June 1966 for each standard region are given in table 2. These revised estimates for 1966 should be used for comparisons with the estimates for June 1967 and subsequent years. The estimates for June 1966 published on pages 224–226 of the March 1967 issue of this GAZETTE (as corrected by the revisions published on page 473 of the June 1967 issue) should be used for comparisons with 1965 and earlier years.

QUARTERLY EMPLOYMENT STATISTICS: HISTORICAL

The following tables give, in full detail, the various series of quarterly employment estimates for recent years which have been published in the GAZETTE since 1966, and incorporate some revisions for dates later than March 1961. These revisions take account of the 1966 Census of Population estimates for employers and self-employed persons, and were foreshadowed when the series were introduced in 1966.

These series for Great Britain were introduced when estimates from June 1950 to September 1965 were published in full detail in the May 1966 issue (pages 210 to 213). Estimates for subsequent dates have since been published at quarterly intervals and, for the main groups within the working population, have been given in the form of unadjusted and seasonally adjusted time series in table 101 each month.

Regional estimates beginning at June 1965 were introduced in the July 1966 issue (page 391). Later estimates have been published quarterly and, for employees in employment, have been given in the form of time series in table 102 each month. These regional series are still too short for seasonally adjusted figures to be calculated.

For reasons outlined in the July, 1966 issue (page 389) and the March 1968 issue (page 207), the previously published regional estimates for December, September and March have not been completely comparable with those for June. The regional estimates for those three quarters of each year have now been revised to remove these discontinuities. It has been assumed that the changes between successive Junes in the numbers employed outside the region in which their cards are exchanged have occurred progressively over the intervening quarters.

The previously published figures for dates later than March 1961 have assumed that the national and regional numbers of employers and self employed persons had remained unchanged. The estimates for this group were based on the results of the April 1961 Census of Population; these have now been revised on the basis of the April 1966 Census of Population results. Consequential revisions to the estimates of the total working population, the total numbers in the civilian labour force and the total numbers in civil employment have been made. The figures for other groups within the working population remain as previously published.

For dates between March 1961 and March 1966, the revised estimates of employers and self employed persons have been obtained by interpolation between the 1961 and 1966 Census estimates. From June 1966 onwards, they assume that the numbers have remained unchanged: these estimates will be revised in due course, probably when data becomes available from the next population census.

^{*†§} See footnotes on page 295.

⁽a) Employees stationed outside Great Britain are included in col. (1) if their national insurance cards were exchanged in Great Britain by their employers. Similarly, members of HM Forces stationed outside Great Britain are included in col. (7). Civil servants without cards who are stationed overseas are shown separately in col. (3)

⁽b) The estimates for employees with cards relate to the first Monday in the months shown. The unemployment figures are taken from the mid-month counts.

⁽c) The relationships between the columns are as follows:

(5) = (1) + (2) + (3) + (4)

(8) = (5) + (6) + (7)

(10) = (5) - (9)

(11) = (6) + (10)

⁽d) Each figure is rounded to the nearest thousand. Thus rounded totals may not agree exactly with the sum of the rounded parts.

[‡] Provisional.

^{*} The Great Britain figures include civil servants stationed outside the United Kingdom and the regional figures have been rounded individually so regional figures do not add up to the national figures.

† The numbers of employees and self-employed are assumed to remain unchanged from June 1966.

[†] Provisional.
§ These figures have been revised and replace those in table 4 on page 214 of the March 1968 issue of this GAZETTE.

AVERAGE RETAIL PRICES OF ITEMS OF FOOD

Average retail prices on 20th February 1968 for a number of important items of food, derived from prices collected for the purposes of the Index of Retail Prices in 200 areas in the United Kingdom, are given below.

Many of the items vary in quality from retailer to retailer and partly because of these differences there are considerable variations in prices charged for many items. An indication of

Average prices (per lb. unless otherwise stated) of certain foods

INDUSTRIAL DISEASES IN 1967

There were 368 cases of industrial diseases, including 144 of chrome ulceration, 86 of epitheliomatous ulceration and 97 of lead poisoning reported last year under the Factories Act, 1961. Two fatal cases, one of mercurial poisoning and one of anthrax, were reported. Details are:

these variations is given in the last column of the following table which shows the ranges of prices within which at least four-fifths of the recorded prices fell.

The average prices are subject to sampling error, and some indication of the potential size of this error was given on page 200 of the March issue of this GAZETTE.

OVERTIME AND SHORT-TIME IN MANUFACTURING INDUSTRIES IN GREAT BRITAIN REVISED ESTIMATES FOR WEEK-ENDED 13th JANUARY 1968

These estimates take account of the information obtained from the June 1967 count of national insurance cards and certain changes in industrial classification (see article on pages 206-207 of the March 1968 issue of this GAZETTE), and are, therefore, different from the unrevised estimates for January 1968 published

on page 224 of the March 1968 issue. Comparable estimates for February 1968, and a note about the content of the estimates are given on page 304 of this issue. A time series is given in table 120 on page 336.

UNEMPLOYED REGISTER: ENTITLEMENT TO

Of the 619,000 persons registered as unemployed in Great Britain on 12th February, 1968, it is estimated that about 269,000 were receiving unemployment benefit only, 83,000 were in receipt of unemployment benefit and a supplementary allowance*. About 140,000 were in receipt of supplementary allowance* only, and 127,000 who were registered as unemployed received no payment.

Details are given in the table below.

The basis of the anlysis, which is produced quarterly, was explained in an article in the MINISTRY OF LABOUR GAZETTE (November, 1960, page 423) when these details were published in this form for the first time. This article also commented on the various categories concerned, but the term "supplementary allowance" should now be substituted for all references to "national assistance".

Entitlement to Benefit

^{*} Formerly termed national assistance.

Note.—Figures have been rounded to the nearest 1,000 and the sum of the constituent items in consequence may differ slightly from the total as shown.

LABOUR TURNOVER: MANUFACTURING INDUSTRIES: PERIOD ENDED 17th FEBRUARY 1968*

The table below shows labour turnover rates (per 100 employees) in manufacturing industries in the period* ended 17th February 1968, with separate figures for males and females. The figures are based on information obtained on returns from employers. who every third month are asked to state, in addition to the numbers employed at the beginning and end of the period, the numbers on the pay roll at the later of the two dates who were not on the pay roll at the earlier date.

The figures in the last item are adopted as representing engagements during the period, and the figures of discharges and other losses are obtained by adding the numbers engaged during the period to the numbers on the pay roll at the beginning of the

period, and deducting from the figures thus obtained the numbers on the pay roll at the end of the period.

It must be borne in mind, however, that the figures of engagements obtained in the way indicated do not include persons engaged during the period who were discharged or otherwise left their employment before the end of the same period, and the percentage rates both of engagements and of discharges in the table accordingly understate to some extent the total intake and wastage during the period.

In spite of this limitation, however, the figures enable comparisons to be made between the turnover rates of different industries and also between the figures for different months for the same

News and Notes

ISSUE OF WORK VOUCHERS FOR COMMONWEALTH CITIZENS

Changes in the arrangements for the issue by the Ministry of Labour of vouchers to Commonwealth citizens wishing to work in the United Kingdom were announced in the House of Commons recently. These arrangements, set out in the White Paper "Immigration from the Commonwealth" (Cmnd 1739), provide for the issue of vouchers from 2nd August 1965 at the rate of 8,500 a year to applicants, whether skilled or unskilled, who have a specific job to come to (category A) and persons with certain special qualifications (category B). Included in the total of 8,500 is a special allocation of 1,000 vouchers a year for Malta, and this will remain unaltered.

The changes which came into operation on 1st March, are designed to reduce waiting lists which have built up: to relate the issue of vouchers more closely to the nation's economic and social needs: to help those with category B vouchers to obtain employment commensurate with their qualifications and to assist dependent territories. They will mean that, excluding the arrangement for Malta, vouchers in categories A and B will be issued at the rate of about 2,300 a year and 5,200 a year, respectively.

At present, the issue of category A vouchers is carried out on a "first come, first served" basis to those with jobs to come to, without any distinction between one type of job and another. Because the demand for vouchers so greatly exceeds the available supply, a waiting list of about 7,000 has built up during the past two years. To reduce this the Government has decided to narrow the area of employment for which vouchers will be issued. Applications for category A vouchers will continue to be dealt with on the existing basis for (a) employment in manufacturing industry and (b) any type of job obtained through properly organised recruitment schemes, operated either by employers in co-operation with Commonwealth Governments or by the Governments themselves, and approved by the Minister of Labour.

All other applications will be considered on their merits, and only those relating to work which is, in the opinion of the Minister of Labour, of substantial economic or social value to the United Kingdom list. Some examples of the applications to be considered on their merits are high level category B, architectural draftsmen, laboraorderlies and other hospital staff. To avoid scheme, remain unchanged.

hardship to those near the top, people already on the waiting list whose applications would have been due for consideration before 1st June will be dealt with under the present rule of "first come, first served." The new criteria will apply to the remainder of the current waiting list and to all fresh applications. A waiting list of about 7,000 has also

built up for category B vouchers because of demand exceeding supply. In addition, there is evidence that some people coming with these particular vouchers are finding difficulty in obtaining suitable employment because their qualifications are different from British ones. To improve their prospects of obtaining suitable employment, the issue of category B vouchers for teachers will be restricted to those who, in addition to being eligible for qualified teacher status, possess a teacher training qualification, acceptable to the Department of Education and Science. Similarly, category B vouchers will only be issued to scientists and technologists holding qualifications likely to be readily acceptable to employers here. As a corollary to these higher standards it will no longer be necessary to have a minimum of two years' experience in suitable employment since graduation. To avoid hardship, applications from teachers, scientists and technologists which would have been due for consideration before 1st June will be dealt with under the existing rules.

Non-graduates with certain professional qualifications if they have a firm offer of an appropriate job will no longer have to have had two years' experience in suitable employment since qualifying. Doctors with suitable qualifications to practice here who apply for vouchers and who produce evidence that they have either obtained places in the Ministry of Health's attachment scheme or have medical posts in the United Kingdom to come to will be given

Applications for both category A and category B vouchers for persons belonging to United Kingdom dependent territories will be dealt with separately from applications for other Commonwealth citizens. A quota of vouchers amounting to 600 a year will be allocated to them, with the proviso that as a general rule no one territory may receive more than 50 per cent. of the quota. The new criteria for category A vouchers will not apply to the dependent territories, will be accepted for inclusion on the waiting or to Malta. The proviso that no one Commonwealth country may receive more than 15 per cent. of the vouchers issued in managerial appointments not covered in category A, and the arrangements for the admission of trainees and seasonal workers, tory technicians; nursing auxiliaries, ward for limited periods, outside the voucher

OVERTIME WORKING AND DISPUTES PROCEDURES

An examination of the problem of overtime working in Britain, and a consideration of the day to day operation of some industrywide disputes procedures are the subjects of two further research papers specially written for the Royal Commission on Trade Unions and Employers' Associations and published recently.

OVERTIME WORKING IN BRITAIN, by Mr. E. G. Whybrew of the Department of Economic Affairs (HMSO or through any bookseller, price 8s. 6d. net), contains the first full examination of the problem of excessive overtime in this country.

It is demonstrated that in recent years there has been a more or less steady rise in overtime working in this country so that 60 per cent. or more male adult workers now work for more than 10 hours a day for three or four days a week, or know little or nothing of the five-day week. Those who work regular and systematic overtime depend on it for a substantial part of their weekly pay packet, and high levels of overtime are particularly widespread among the lower paid.

The paper also shows that the present level of overtime in Britain is historically unusual, and that almost every country studied works less overtime than we do. The reasons for high overtime are said to have little or nothing to do with production demands. Far from making possible essential output much of British overtime now seems to arise out of a desire to waste time at work to obtain higher pay. As a result it can be argued that excessive overtime working is one of the main ways in which labour resources are wasted in this country.

The analysis of a number of case studies shows that high levels of overtime can usually be reduced when top level management decides to embark on a well planned initiative to that end. Resistance most frequently arises from lower levels of management, who cannot see how their production targets can be met if overtime is abolished. On the other hand, once they have appreciated managements' interests, trade unions can usually be induced to support measures to lower overtime levels especially since it is usually possible to provide for a measure of compensation for their members' loss of earnings.

The final sections of the paper discuss various ways of inducing a general movement for the reduction of overtime working. A possible way of controlling overtime by means of legislation is also suggested.

The paper on disputes procedures written by Mr. A. I. Marsh, Senior Research Fellow, St. Edmund Hall, Oxford and Dr. W. E. J. McCarthy, the commission's research director (HMSO or through any bookseller, price 11s. net) completes the study of the subject for the commission. The first part, dealing with general functions of disputes procedures, was published in October 1966 (see MINISTRY OF LABOUR GAZETTE. November 1966, page 740).

The authors say that all the procedures studied have some defects, although those in engineering and building are probably most in need of reform. In general, procedures operate under growing strain, and often result in undue delay. They also encourage piecemeal settlements in a way that often leads to further trouble. They do not encourage a planned management response to the challenge represented by shop stewards. Because of this they may be said to be partly responsible for many unofficial strikes.

In their conclusions the authors argue that changes in technology, management structure, union power and so on affect the working of procedures. As a result they are in need of constant revision and reform. But neither managers nor unions find it easy to initiate such changes, for they are excessively attached to what appears to them to have worked in the past.

The authors suggest the creation of a permanent body of Procedural Commissioners who will consider the adequacy of existing procedures when asked to do so by the parties or the Government. As to the policy which the new body might adopt, they say that it would be unwise to think in terms of one procedural model, although it would probably want to promote the extension of plant and company bargaining. To an increasing extent it would be likely to find that our traditional system of national wage bargaining is out-of-date and in need of reform. It is argued that, to preserve the necessary flexibility and receptivity to change, it would be most unwise to make procedure agreements legally enforceable.

It should be understood that the views expressed in these papers are those of the authors named and do not necessarily represent or foreshadow those of the Commission.

RETIREMENT AGE FOR DOCK WORKERS

The compulsory retiring age for registered dock workers in Great Britain should be progressively reduced from 68 to 65 by 1st January 1970, and lump sums of up to £600 should be paid to those affected in the transitional period.

These are the principal recommendations in the report of a Committee of Inquiry (HMSO or through any bookseller, price 1s. 6d. net) set up earlier this year to inquire into the difference between the two sides of the National Joint Council for the Port Transport Industry about the arrangements for implementing this reduction, which had already been agreed in principle in December 1960.

The committee, under the chairmanship of Mr. J. S. Wordie, proposes that the reduction in the retirement age should be effected in three stages: to 67 on 1st January 1969: to 66 on 1st July 1969 and to 65 on 1st January 1970. The age had already been progressively reduced from 70 to 68 between 1961 and 1963.

The committee considers that some compensation should be paid to the men most immediately affected, who might have otherwise have stayed on, and suggest a sliding scale of payments which they describe as "fair and realistic". It suggests that such payments should be made from a general fund such as the levy stabilisation fund, which is collected by the National Dock Labour Board from all employers in the industry, and further recommends that employers should give serious consideration to a scheme of voluntary severance payments to employees who are willing to retire before reaching the compulsory age.

These lump sum payments proposed by the committee would be additional to the existing lump sum of £100 payable to most dockers on retirement and the retirement pension of 25s, a week plus national insurance benefits, which, the committee says, compare well with other industrial pension schemes. The committee recommends, however, as a separate matter that there should be an actuarial review of the Dockers' Pension Fund with a view to ascertaining whether any improvements in the benefits are possible within the existing contribution arrangements under the rules of the scheme.

The committee was informed in evidence that about 35 per cent. of all dock workers already retire voluntarily at the age of 65, and that of just under 2,000 men who were over the age of 65 when decasualisation was introduced in September 1967 all but 162 took advantage of a voluntary severance payments scheme which was offered to them at that time. The effect of the committee's recommendations is, therefore, mainly limited to men now reaching the

TRAINING DEVELOPMENTS

A draft schedule incorporating proposals for amendments to the Order that constituted the industrial training board for the shipbuilding industry, (SI 1964, No. 1782, HMSO or through any bookseller, price 6d. net) has been circulated to interested organisations.

The principal effects of the amendments which are proposed would mean the inclusion of the construction or fitting out of ships, including boats, at nonwaterside establishments, and boiler and hull scaling within the scope of the board.

Other proposals would also bring yacht broking, the making of sails and certain boat hiring activities within its scope. A number of other amendments are proposed to clarify the Order.

Under other draft schedules which have been circulated, amendments have been made to the Orders which set up the industrial training boards for the wool,

jute and flax industry (SI 1966, No. 428. HMSO or through any bookseller price 9d. net) and for the carpet industry (SI 1966. No. 245, price 9d. net).

Amended levy for agricultural industry

An amended rate of levy on employers coming within the scope of the Agricultural. Horticultural and Forestry Industry Training Board of £3 for each whole-time worker has been approved.

The order approving the new rate came into operation on 1st April.

Provision for the amended rate follows the Government's recognition of the widespread disruption to the board's operations caused by the foot and mouth outbreak just at the time when the original levy was to be raised, and the Government's decision to continue the assistance given to the board until the end of March 1968 by making a special grant of up to £450,000. (See MINISTRY OF LABOUR GAZETTE, March 1968, page 218.)

DISABLED PERSONS REGISTER

At 17th April 1967 the number of persons registered under the Disabled Persons (Employment) Acts, 1944 and 1958, was 655,379 compared with 654,483 at 18th April 1966.

There were 66,240 disabled persons on the register who were registered as unemployed at 11th March 1968, of whom 58,671 were males and 7,569 females. Those suitable for ordinary employment were 57,570 (51,042 males and 6,528 females), while there were 8,670 severely disabled persons classified as unlikely to obtain employment other than under special conditions. These severely disabled persons are excluded from the monthly unemployment figures given elsewhere in the GAZETTE.

In the four weeks ended 6th March, 5,605 registered disabled persons were placed in ordinary employment. They included 4.589 men, 907 women and 109 young persons. In addition, 206 placings were made of registered disabled persons in sheltered employment.

PROFESSIONAL AND EXECUTIVE REGISTER

The total number of persons on the Professional and Executive Register on 6th March 1968 was 29,520 consisting of 27.558 men and 1.962 women, of whom 14,056 men and 714 women were in employment.

During the period 7th December 1967 to 6th March 1968 the number of vacancies filled was 2,428. The number of vacancies unfilled at 6th March was 9,889.

UNEMPLOYMENT BENEFIT

For the period of thirteen weeks ended 8th March 1968 expenditure on unemployment benefit in Great Britain (excluding cost of administration) amounted to approximately £35,344,000. During the thirteen weeks ended 8th December 1967 the corresponding figure was £29,675,000, and during the thirteen weeks ended 10th March 1967 it was £31,147,000.

Monthly Statistics

SUMMARY

Employment in Production Industries

The estimated total number of employees in employment in industries covered by the index of industrial production in Great Britain was 11,059,900 in February (8,196,200 males 2,863,700 females). The total included 8,630,100 (5,931,300 males 2,698,800 females) in manufacturing industries, and 1,485,600 (1,400,700 males 84,900 females) in construction. The total in these production industries was 4,000 lower than that for January 1968 and 261,000 lower than in February 1967. The total in manufacturing industry was 2,000 higher than in January 1968 and 171,000 lower than in February 1967. The number in construction was 2,000 lower than in January 1968 and 45,000 lower than in February 1967.

Unemployment

The number of registered wholly unemployed excluding school leavers on 11th March 1968 in Great Britain was 569,696. After adjustment for normal seasonal variations, the number in this group was about 509,000 representing 2.2 per cent. of employees compared with about 503,000 in February.

In addition, there were 2,255 unemployed school leavers and 17,901 temporarily stopped workers registered, so the total registered unemployed was 589,852, representing 2.5 per cent. of employees. This was 29,306 less than in February when the percentage rate was 2.7.

Among those wholly unemployed in March, 218,903 (38.6 per cent.) had been registered for not more than 8 weeks compared with 237,728 (40.2 per cent.) in February; 86,645 (15.3 per cent.) had been registered for not more than 2 weeks, compared with 95,309 (16·1 per cent.) in February. Casual workers who were previously included in these figures have now been excluded. They numbered 4,817 in March 1968 and 4,966 in February 1968. Please see page 973 of the December 1967 GAZETTE.

Between February and March the number temporarily stopped fell by 5,258 and the number of school leavers unemployed fell by 804.

Vacancies

The number of unfilled vacancies for adults at Employment Exchanges in Great Britain on 6th March 1968, was 176,563; 11,932 more than on 7th February. After adjustment for normal

seasonal variations, the number was about 187,000, compared with about 185,200 in February. Including 81,194 unfilled vacancies for young persons at Youth Employment Offices, the total number of unfilled vacancies on 6th March was 257,757; 25,370 more than on 7th February.

Overtime and short-time

In the week ended 17th February 1968, the estimated number of operatives other than maintenance workers working overtime in establishments with eleven or more employees in manufacturing industries, excluding shipbuilding and ship-repairing, was 2,000,300. This is about 34.3 per cent. of all operatives. Each operative on average worked about 8½ hours overtime during the week.

In the same week the estimated number on short-time in these industries was 46,800 or about 0.8 per cent. of all operatives, each losing about 11 hours on average.

Basic rates of wages and hours of work

At 31st March 1968, the indices of weekly rates of wages and of hourly rates of wages for all workers (31st January 1956 = 100) were 168.1 and 185.3 compared with 167.6 and 184.7 at 29th February 1968.

Index of Retail Prices

At 19th March the official retail prices index was 122.6 (prices at 16th January 1962 = 100) compared with 122.2 at 20th February and 118.6 at 21st March 1967. The index figure for food was 122.1 compared with 121.8 at 20th February.

Stoppages of work

The number of stoppages of work due to industrial disputes in the United Kingdom beginning in March, which came to the notice of the Ministry of Labour, was 160, involving approximately 48,400 workers. During the month approximately 67,900 workers were involved in stoppages, including those which had continued from the previous month, and 287,000 working days were lost, including 62,000 lost through stoppages which had continued from the previous month.

THOUSANDS

The table below provides an industrial analysis of employees in employment in Great Britain for industries covered by the Index of Production at mid-February 1968, and for the two preceding months and for June 1967.

The term employees in employment relates to all employees (employed and unemployed) other than those registered as wholly unemployed; it includes persons temporarily laid off but still on employers' pay-rolls and persons unable to work because of short-term sickness. Part-time workers are included and counted as full units.

The figures are based primarily on estimates of the total numbers of employees and their industrial distribution at midyear which have been compiled on the basis of counts of insurance cards. For manufacturing industries the returns rendered monthly by employers under the Statistics of Trade Act, 1947, have been used to provide a ratio of change.

These returns show numbers employed (including those temporarily laid off and those absent from work because of short-term sickness) at the beginning and end of the period. The two sets of figures are summarised separately for each industry and the ratio between the two totals is the basis for computing the change in employment during the period.

For the remaining industries in the table estimates of monthly changes have been provided by the nationalised industries and government departments concerned.

Industrial analysis of employees in employment: Great Britain

OVERTIME AND SHORT-TIME IN MANUFACTURING INDUSTRIES

In the week ended 17th February, 1968, it is estimated that the total number of operatives working overtime in establishments with 11 or more employees in manufacturing industries (excluding shipbuilding) was 2,000,300 or about 34.3 per cent. of all operatives, each working about 8 hours on average.

In the same week the estimated number on short-time in these establishments was 46,800 or 0.8 per cent. of all operatives each losing about 11 hours on average.

Estimates by industry have been calculated on the basis of the revised employees in employment estimates shown on pages 300 to 301, i.e. they take account of the information obtained from the June 1967 count of national insurance cards and certain changes in industrial classification (see the article on pages 206 to 207 in

the March 1968 issue of this GAZETTE). Revised overtime and short-time figures for January 1968, comparable with the February 1968 figures are published on page 297. A time-series is given in table 120 on page 336.

The figures relate to operatives other than maintenance workers. Administrative, technical and clerical workers are excluded. The information about short-time relates to that arranged by the employer, and does not include that lost because of sickness, holidays or absenteeism. Operatives stood off by an employer for the whole week are assumed to have been on short-time for 42 hours each. Overtime figures relate to hours of overtime actually worked in excess of normal hours.

Overtime and short-time worked by operatives in manufacturing industries*—Great Britain: Week ended 17th February, 1968

INEMPLOYMENT ON 11TH MARCH 1968

The number of persons other than school leavers registered as wholly unemployed at Employment Exchanges and Youth Employment Offices in Great Britain on 11th March 1968 was 569,696; 475,499 males and 94,197 females and was 23,244 lower than on 12th February. The seasonally adjusted figure was 508,500 or 2.2 per cent. of employees, compared with 2.2 per cent. in February and 2.0 per cent. in March 1967. The seasonally adjusted figure increased by 5,300 in the four weeks between the February and March counts and decreased by about 9,900 per month on average between December 1967 and March 1968.

Between 12th February and 11th March, the number of school leavers registered as unemployed fell by 804 to 2,255 and the number of temporarily stopped workers registered fell by 5,258 to 17,901. The total registered unemployed fell by 29,306 to 589,852, representing 2.5 per cent. of employees compared with 2.7 per cent. in February. The total registered included 39,057 married women and 4,817 casual workers.

Of the 567,134 wholly unemployed, excluding casual workers but including school leavers, 86,645 had been registered for not more than 2 weeks, a further 52,800 from 2 to 4 weeks, 79,458 from 4 to 8 weeks and 348,231 for over 8 weeks. Those registered for not more than 4 weeks accounted for 24.6 per cent of the total of 567,134, compared with 26.2 per cent. in February, and

those registered for not more than 8 weeks accounted for 38.6 per cent., compared with 40.2 per cent. in February.

Prior to 13th November 1967, the numbers of unemployed casual workers were included in the numbers registered as unemployed for 1 week or less in table 3; casual workers are now excluded from this analysis.

^{*} Numbers registered as unemployed expressed as a percentage of the estimated total number of employees (employed and unemployed) at mid-1967, except for the London and South Eastern and Eastern and Southern regions for which mid-1967 figures are not yet available.

[†] Casual workers are included in the totals but are now excluded from the duration

^{*} The wholly unemployed include unemployed casual workers (4,638 males and 179 females in Great Britain and 4,912 males and 207 females in the United Kingdom).

NUMBERS UNEMPLOYED IN PRINCIPAL TOWNS AND DEVELOPMENT AREAS

Details for some principal towns and districts in the United Kingdom of the numbers of persons registered as unemployed at employment exchanges and youth employment offices and the percentage rates of unemployment are given in the table below. It also gives similar information for each of the new development areas, which were designated by the Development Areas Order 1966, and made under the Industrial Development Act 1966. The development areas replace, and in most but not all cases, incorporate former development districts.

The tables for principal towns and development districts published in issues of the GAZETTE prior to September 1966 were mutually exclusive; in other words in no case were the figures for any given area included in both tables. In the present series figures for principal towns and for districts which are part of development areas are also included in the development areas

Numbers unemployed in principal towns and development areas at 11th March, 1968

PLACING WORK OF EMPLOYMENT EXCHANGES

In the four weeks ended 6th March 1968, 140,099 persons were placed in employment by the employment exchanges and youth employment offices in Great Britain. At the end of the period there were 257,757 vacancies outstanding. For the five weeks ended 7th February 1968, the figures were 184,810 and 232,387 respectively.

Details for these periods are shown in table 1.

The figures of placings exclude engagements of workpeople by employers that were made without the assistance of employment exchanges and youth employment offices. Similarly, the figures of unfilled vacancies represent only the number of vacancies notified by employers and remaining unfilled at the specified dates. They do not purport to represent the total numbers of unfilled vacancies. Nevertheless, comparison of the figures for the various dates provides some indication of the change in the demand for labour.

An analysis for the placings in Great Britain by broad industry groups and in some selected industries within the Orders of the Standard Industrial Classification 1958, and an analysis of the total placings and vacancies unfilled in the regions are given in table 2.

STOPPAGES OF WORK

The number of stoppages of work* due to industrial disputes in the United Kingdom, beginning in March, which came to the notice of the Ministry, was 160. In addition, 35 stoppages which began before March were still in progress at the beginning of the month. The figures relate to disputes connected with terms and conditions of employment. They exclude those involving fewer than 10 workers, and those which lasted less than one day, except any in which the aggregate number of working days lost exceeded 100.

The approximate number of workers involved at the establishments where these stoppages occurred is estimated at 67,900. This total includes 19,500 workers involved in stoppages which had continued from the previous month. Of the 48,400 workers involved in stoppages which began in March, 38,300 were directly involved and 10,100 indirectly involved, in other words thrown out of work at the establishments where the stoppages occurred, but not themselves parties to the disputes.

The aggregate of 287,000 working days lost in March includes 62,000 days lost through stoppages which had continued from the previous month.

* The figures for the month under review are provisional and subject to revision; those for earlier months have been revised where necessary in accordance with the most recent information. The figures have been rounded to the nearest 100 workers and 1,000 working days; the sums of the constituent items may not, therefore, agree with the totale shape.

and 1,000 working days, the sums of the constituent with the totals shown.

† Less than 500 working days.

‡ Some stoppages of work involved workers in more than one industry group, but have each been counted as only one stoppage in the total for all industries taken

Principal stoppages of work during March

On 11th March about 3,200 bus drivers and conductors at Liverpool stopped work in protest against the non-payment, because of a reference to the National Board for Prices and Incomes, of a 23s. a week pay increase which had been locally agreed. No settlement had been reported by the end of the

Another stoppage in the Liverpool area, by lorry drivers, mates and ancillary workers employed by haulage contractors and some firms operating "C" licensed vehicles, began on 18th March and involved about 3,000, rising in the following week to about 6,000. workers. The stoppage was in support of a demand for new basic wage rates from £16 a week upwards, according to tonnage of vehicle, for a 40-hour week. Work was resumed on Monday, 8th April on the basis of immediate talks with individual firms for a £16 minimum wage, associated with increased productivity.

BASIC WEEKLY RATES OF WAGES, NORMAL WEEKLY HOURS AND BASIC HOURLY RATES OF WAGES

The statistical tables in this article relate to changes in basic rates of wages or minimum entitlements and reductions in normal weekly hours, which are normally determined by national collective agreements or statutory wages regulation orders. For these purposes, therefore, any general increases are regarded as increases in basic or minimum rates. In general, no account is taken of changes determined by local negotiations at district, establishment or shop floor level. The figures, do not, therefore, necessarily imply a corresponding change in "market" rates or actual earnings of those who are being paid at rates above the basic or minimum rates. The figures are provisional and relate to manual workers only.

The changes in monetary amounts represent the increases in basic full-time weekly rates of wages or minimum entitlements only, based on the normal working week, i.e. excluding short-time or overtime.

At 31st March 1968 the indices of changes in weekly rates of wages, of normal weekly hours and of hourly rates of wages for all workers, compared with a month and a year earlier, were:

31st JANUARY 1956 = 100

Date		All indu	stries and		Manufacturing industries only				
Date Cost,a	Contrarepoli 1 111	Basic weekly rates	Normal weekly hours	Basic hourly rates	Basic weekly rates	Normal weekly hours	Basic hourly rates		
1967	March	156-4	91.0	171.9	153.5	91 · 1	168-5		
1968	February	167-6	90.7	184-7	165.9	90.6	183 · 1		
1968	March	168-1	90.7	185 - 3	166-1	90.6	183 - 2		

Note.— The full index numbers and explanatory notes are given in table 130.

Principal changes during March

- Building and civil engineering: Increase of Id. an hour for craftsmen and labourers under cost-of-living sliding-scale arrangements (4th March).
- Footwear manufacture: Minimum day wage rates for adult workers increased by 15s. a week. Additional cost-of-living increase of 2s. a week (first pay day in March).
- Gas supply: Increases in standard rates of 4d. an hour for gas fitters and 3½d. for labourers (3rd March).
- Dock labour: Guaranteed weekly payment increased from £15 to £16 in ports other than London (25th March).
- Paper box making (Wages Council): Increases of varying amounts in minimum time rates. Piecework basis time rates increased by 13s. 4d. a week for men and 10s. 10d. for women (18th March).
- Coopering: Minimum hourly rates for journeymen increased by 6d. (first pay day after 4th March).

Cost-of-living sliding-scale adjustments during the month resulted in increases for workers in several industries in addition to building and civil engineering and footwear manufacture. mentioned above. The industries chiefly concerned were carpet manufacture, iron and steel production and the printing of national newspapers.

Full details of changes reported during the month are given in the separate publication "Changes in Rates of Wages and Hours of Work" which is published concurrently with this GAZETTE.

Estimates of the changes which came into operation in March indicate that the basic weekly rates of wages or minimum entitlements of some 1,840,000 workers were increased by a total of £385,000, but, as stated earlier, this does not necessarily imply a corresponding change in "market" rates or actual earnings. About 20,000 workers had their normal weekly hours reduced by one hour. Of the total increase of £385,000 about £220.000 resulted from cost-of-living sliding-scale adjustments, £145,000 from arrangements made by joint industrial councils or similar bodies established by voluntary agreements, £10,000 from direct negotiations between employers' associations and trade unions, and £10,000 from statutory wages regulation orders.

Analysis of aggregate changes

The following tables show (a) the cumulative effect of the changes, by industry group and in total, during the period January to March, with the total figures for the corresponding period in the previous year entered below, and (b) the month by month effect of the changes over the most recent period of twelve months. In the columns showing the number of workers affected, those concerned in two or more changes in any period are counted only once.

Changes in holidays-with-pay arangements

Increases in annual holidays have been awarded in the following industries in Northern Ireland, all of which are covered by statutory wages regulation orders:

Dressmaking and women's light clothing-2 additional days; Hat, cap and millinery—2 additional days in 1968 and a further 2 days in 1969; Shirtmaking—Increased to 3 weeks (previously 2 weeks and 3 days); Sugar confectionery and food preserving— 5 additional days after 5 years' service with the same employer.

RETAIL PRICES 19th March 1968

At 19th March 1968 the official retail prices index was 122.6 (prices at 16th January = 100), compared with 122.2 at 20th February and 118.6 at 21st March 1967.

The rise in the index during the month was due mainly to higher prices for most national morning and Sunday newspapers and for fresh green vegetables, the prices of which vary seasonally.

The index measures the changes from month to month in the average level of prices of the commodities and services purchased by the great majority of households in the United Kingdom, including practically all wage earners and most small and medium salary earners.

The indices for three sub-divisions of the food group were 122.1 for items whose prices are affected by seasonal variations (fresh milk, eggs, potatoes, and other fresh vegetables, apples and pears, fish and home-killed mutton and lamb), 123.0 for those items which are affected by changes in import prices (bacon, cooked ham, butter, cheese and chilled beef) and 122.0 for other items.

Detailed figures for various groups and sub-groups are:

Increases in the prices of fresh green vegetables were partly offset by reductions in the prices of tomatoes and bacon. The index for foods, the prices of which are affected by seasonal variations, rose by rather more than one per cent. to 122.1, compared with 120.7 in the previous month. The index for the food group as a whole rose slightly to 122.1, compared with 121.8 in February.

Transport and vehicles

Mainly as a result of a rise in the average level of prices of secondhand cars the index for the transport and vehicles group as a whole rose by rather less than one-half of one per cent. to 114.7, compared with 114.4 in February.

Miscellaneous goods

Mainly as a result of increases in the prices of most national morning and Sunday newspapers the group index figure rose by about 2 per cent. to 120.1, compared with 117.6 in February.

Meals bought and consumed outside the home

There was a rise of nearly one-half of one per cent. in the average level of prices in this group and the index rose to 122.4, compared with 121.9 in February.

Other groups Plantons materials and to does not be stream its

In the remaining seven groups there was little change in the general level of prices.

INDUSTRIAL FATALITIES AND DISEASES

In March, 55 fatalities were reported under the Factories Act, compared with 46 in February. This total included 33 arising from factory processes, 20 from building operations and works of engineering construction, and two in docks and warehouses.

Fatalities in industries outside the scope of the Factories Act included 15 in mines and quarries reported in the five weeks ended 30th March, compared with 10 in the four weeks ended 24th February. These 15 included 13 underground coal mine-workers and one in quarries, compared with four and three a month

In the railway service there were seven fatal accidents in March and four in the previous month.

In March, three seamen employed in ships registered in the United Kingdom were fatally injured, compared with 61 in

In March, 27 cases of industrial diseases were reported under the Factories Act. No fatal cases were reported: 11 were of chrome ulceration, 10 of lead poisoning, one of aniline poisoning and five of epitheliomatous ulceration.

^{*} The Cost of Living Advisory Committee recommended in 1962 that until a satisfactory index series based on actual prices became available half the expenditure on meals out should continue to be allocated to the food group and the other half spread proportionately over all groups, including the food group. The index for meals out for 16th January 1968 implicit in this recommendation was 121.4. Since January 1968 an index series based on actual prices has been available and indices in this series have been linked with the implicit index for meals out for 16th January 1968, to obtain indices for meals out with 16th January 1962 taken as 100.

Statistical Series

Tables 101-133 in this section of the GAZETTE give the principal statistics compiled regularly by the Ministry of Labour in the form of time series including the latest available figures together with comparable figures for preceding dates and years.

They are arranged in subject groups, covering the working population, employment, unemployment, unfilled vacancies, hours worked, earnings, wage rates and hours of work, retail prices and stoppages of work resulting from industrial disputes. Some of the main series are shown as charts. Brief definitions of the terms used are at the end of this section.

The national statistics relate either to Great Britain or the United Kingdom, and regional statistics, where possible, to the Standard Regions for Statistical Purposes [MINISTRY OF LABOUR GAZETTE, January 1966, page 20] which conform generally to the Economic Planning Regions. Where this is not practicable at present, they relate to the former Standard Regions for Statistical Purposes [MINISTRY OF LABOUR GAZETTE, January 1965, page 5] or, exceptionally, to the Ministry of Labour Administrative Regions in the south east of England, [MINISTRY OF LABOUR GAZETTE, April 1965, page 161].

Working population. The changing size and composition of the working population of Great Britain at quarterly dates is in table 101 and more detailed analyses of the employment and unemployment figures are in subsequent tables.

Employment. As it is not practicable to estimate short-term changes in the numbers of self-employed persons, the group of employment tables relate only to employees. Monthly estimates are given for broad groups of industries covered by the Index of Industrial Production, and annual mid-year estimates for other groups (table 103). The annual totals in employment in all industries and services are analysed by region in table 102; quarterly figures are given from June 1965.

Unemployment. The group of unemployment tables (104–117) show the numbers of persons registered at employment exchanges and youth employment offices in Great Britain and in each region at the monthly counts. For Great Britain separate figures are given for males and females. The registered unemployed include persons who for various personal and other reasons are likely, irrespective of the general economic position, to have difficulty in securing regular employment in their home areas. Analyses of the characteristics of the unemployed were included in articles in the April 1966 and July 1966 issues of

The total registered is expressed as a percentage of the total numbers of employees to indicate the incidence rate of unemployment. It is also subdivided into those temporarily stopped from work and those wholly unemployed. The latter group includes persons without recent employment who have registered whilst seeking employment, and, in particular, young persons seeking their first employment, who are described as schoolleavers, and shown separately.

The wholly unemployed are analysed in table 118 according to the duration in weeks of their current spell of registration.

The national and regional statistics of wholly unemployed. excluding school-leavers, are given, and, in addition, are adjusted for normal seasonal variations. The national figures are also analysed by industry group; these, too, are adjusted for normal seasonal variations.

Unfilled vacancies. The vacancy statistics (table 119) relate to the vacancies notified by employers to employment exchanges (for adults) and to youth employment offices (for young persons). and which, at the date of count, remain unfilled. They do not measure the total volume of unsatisfied immediate manpower requirements of employers, and, for young persons, include vacancies which are intended to be filled after the ending of the school term rather than immediately.

Hours worked. This group of tables provides additional information about the level of industrial activity. Table 120 gives estimates of overtime and short-time working by operatives in manufacturing industries; table 121 the total hours worked and the average hours worked per operative per week in broad industry groups in index form; table 122 gives average weekly hours worked per week by men and by women wage earners in selected industries in the United Kingdom covered by halfyearly earnings enquiries.

Earnings and wage rates. The average weekly and hourly earnings of wage earners in the United Kingdom in industries covered by the half-yearly enquiries are also given in table 122; average weekly earnings of administrative, technical and clerical employees in table 123: and those earnings in index form in table 124. The average earnings of clerical and analogous employees and all administrative, technical and clerical employees in certain industries and services are in table 125, wage drift in industries covered by the half-yearly earnings in table 126, and average earnings in index form by industry in table 127, and by occupation in manufacturing industry in table 128. The next table, 129, shows, in index form, movements in weekly and hourly wage rates and earnings and normal and actual weekly hours of work, and in salaried earnings. The final tables in this group, 130 and 131 show indices of weekly and hourly rates of wages, and normal weekly hours for all industries and services, for manufacturing industries and by industry group.

Retail prices. The official index of retail prices covering all items, and for each of the broad item group, is in table 132.

Industrial stoppages. Details of the numbers of stoppages of work due to industrial disputes, the number of workers involved and days lost are in table 133.

Conventions. The following standard symbols are used: not available

nil or negligible (less than half the final digit shown)

not elsewhere specified

U.K. Standard Industrial Classification (1958 edition)

A line across a column between two consecutive figures indicates that the figures above and below the line have been compiled on a different basis, and are not wholly comparable, or that they relate to different groups for which totals are given in the table.

Where figures have been rounded to the final digit, there may be an apparent slight discrepancy between the sum of the constituent items and the total as shown.

Although figures may be given in unrounded form to facilitate the calculation of percentage changes, rates of change, etc. by users, this does not imply that the figures can be estimated to this degree of precision, and it must be recognised that they may be the subject of sampling and other errors.

[•] The figures given in this column are estimates of the total number of employees in employment given in table 101 obtained by the method described in the article on pages 207–214 in May 1966 issue of the GAZETTE. For June 1959 to June 1964(a) they differ from the sum of the estimates given for industry groups which were compiled by different methods.

EMPLOYMENT employees in employment: industrial analysis: Great Britain

Mid-mor	CONTACTOR	Local government service	National government service	Miscellaneous services (excluding catering, hotels, etc.)	Catering, hotels, etc.	Financial, professional and scientific services	Distributive trades	Transport and communication	Gas, electricity and water	Construction	Other manufacturing industries	Paper, printing and publishing	Timber, furniture, etc.	Bricks, pottery, glass, cement, etc.	Clothing and footwear

[†] Industries included in the Index of Production i.e. Order II—Order XVIII of the Standard Industrial Classification (1958).

[‡] Estimates for June 1964(b) and later months are on the revised basis of calculation and are not strictly comparable with the estimates for June 1964(a) and earlier dates. (See pages 110 to 112 of the March 1966 issue of this GAZETTE.)

^{||} Figures after June 1967 for industry groups are provisional and may be revised after the count of National Insurance cards at mid-1968.

Note: Between June 1966 and June 1967 the industrial classifications of many establishments were corrected. The estimates from July 1966 onwards take account of these changes; the estimates up to and including May 1966 do not take account of them. Estimates for June 1966 are shown on both bases, i.e. (a) excluding and (b) including the effects of reclassifications.

§ Revised figure.

^{*} Figures relate to establishments with more than ten employees in all manufacturing industries except shipbuilding and ship repairing. From 1959 to 1961(a) they relate only to those establishments which rendered returns in the month concerned. From May 1961(b) onwards they are adjusted to allow for establishments not rendering returns.

† Figures from May 1960 are based on the Standard Industrial Classification (1958).

HOURS OF WORK manufacturing industries: hours worked by operatives: Great Britain

[†] Operatives stood off for the whole week are assumed to have been on short-time to the extent of 45 hours each until November 1960 and 42 hours each thereafter.

[§] The estimates from June 1966 onwards have been revised to take account of certain changes in industrial classification (see pages 206–207 of the March 1968 issue of this Gazette). The estimates for June 1966 are given on both bases, i.e. (a) excluding and (b) including the effects of reclassification. The estimates from July 1966 onwards have also been revised to take account of information obtained from the June 1967 count of National Insurance cards.

^{*} In the calculations, use is made of information obtained on monthly returns from employers, and, from June 1962 onwards, these relate to a week towards the middle instead of at the end of the month. In consequence, the indices for July and August instead of at the end of the month. In consequence, the indices for July and August 1964, 1965, 1966 and 1967 also relate to earlier weeks in the month, and compared with previous years, the indices for July 1964-67 are less affected by holidays, and the indices for August 1964-67 are much more affected. It is estimated that, if the indices of total weekly hours worked for manufacturing industry as a whole for July and August 1964-67 had related, as in previous years, to the last full week in the month, the indices for July 1964-67 would have been approximately six points lower, the index for August 1964 approximately 14 points higher, and the indices for August 1965-66 approximately 13 points higher, and the index for August 1967 approximately 12 points higher.

† Estimates for this month are less reliable because full details of sick absence are not available.

[‡] Estimates of total hours worked by operatives for all months from June 1966 have now been based on estimated numbers of operatives which take account of corrections made to industrial classifications of establishments (see page 206 of the March 1968 issue of this GAZETTE) and, from July 1966, of the mid-1967 count of national insurance cards. These have been expressed as index numbers linked on to the previously published values of the indices for June 1966. Figures for dates after June 1967 are subject to further registion in the light of information to the light of the formation of the light of the li June 1967 are subject to further revision in the light of information to be derived from the count of national insurance cards at mid-1968. The figures from November 1967 may also be subject to revision when the results of the April 1968 enquiry into the hours of work of manual workers are available.

A full account of the method of calculation was published on pages 305 to 307 of the August 1962 issue, and on page 404 of the October 1963 issue respectively of this

Note:
Firms with fewer than 25 employees (administrative, technical, clerical and operatives combined) were outside the scope of the enquiry. Only a 50 per cent. sample of firms with 25-99 employees were asked to complete the enquiry forms and for this reason in compiling these tables the numbers of administrative, technical and clerical employees

in this size range and their aggregate earnings have been doubled before being added to the corresponding totals for the larger firms in each industry for the purpose of

calculating average earnings.

† All industries and services as in footnote † to table 124.

Administrative, technical and clerical employees: index of average earnings (all industries and services covered†)

The table covers all full-time workers in the industries included in the Ministry of Labour's half-yearly earnings enquiries (Table 122).

* The figures in column (3) are calculated by:

1. Assuming that the amount of overtime is equal to the difference between the actual hours worked and the average of normal weekly hours;

Multiplying this difference by 1½ (the assumed rate of overtime pay);
 Adding the resultant figure to the average of normal weekly hours to produce a "standard hours equivalent" of actual hours worked; and
 Dividing the average weekly earnings by the "standard hours equivalent" which gives a reasonably satisfactory estimate of average hourly earnings exclusive of overtime.

EARNINGS

January February*

[†] England and Wales only.

‡ England and Wales only.

‡ Except sea transport and postal services. The indices from August 1963 include London Transport and from October 1966 British Road Services.

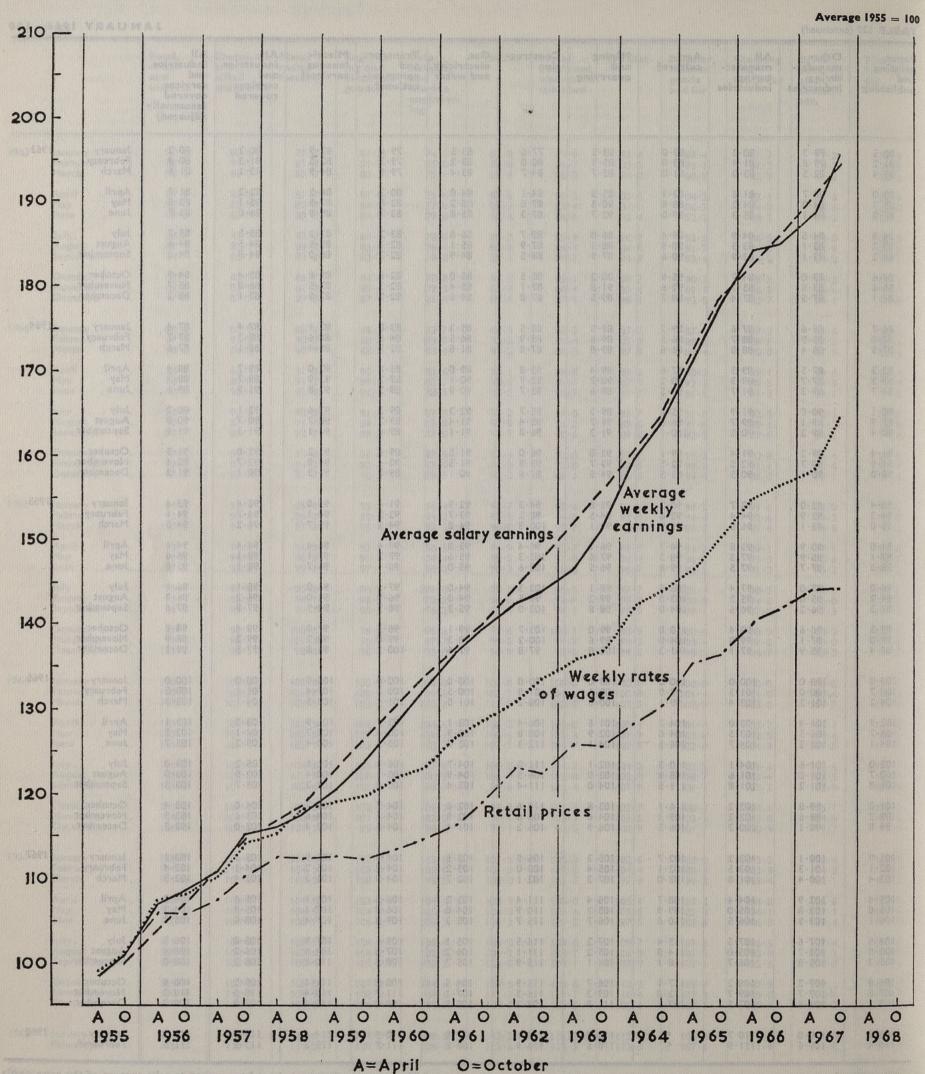

§ Consisting of laundries and dry cleaning, motor repairers and garages and repair of boots and shoes.

^{||} The seasonal adjustments have been revised to take account of the extra year's

ata, and include a correction for the date of Easter.

The epidemic of foot and mouth disease prevented visits by Ministry of Agriculture wages inspectors to farms in infected and adjacent areas. For this reason there is insufficient information to enable an accurate index for agriculture to be calculated for this month but the best possible estimate has been used in the compilation of the index for all industries and services.

Weekly rates of wages, average weekly earnings (manual workers), retail prices; average salary earnings (1955-67)

EARNINGS manufacturing industries (adult males): index of earnings by occupation: Great Britain

^{*} Actual average of normal weekly hours at the index base date (31st January 1956) is shown in brackets at head of column.

170·6 170·7 171·0

176·4 176·5 176·9

188·9 189·0 189·3

90·6 90·6 90·6

These indices have been converted to a common base date (average 1955 = 100) and therefore should not be compared with indices on different bases.

* The indices of rates of wages and of normal weekly hours relate to manual workers in all industries and services, but those for average weekly earnings and average hours worked cover only those in industries included in the half-yearly enquiry into earnings and hours of manual workers (table 122).

^{1.} These indices measure the average movement in the level of full-time basic weekly rates of wages or minimum entitlements, normal weekly hours of work and hourly rates of wages in the principal industries and services in the United Kingdom. Details of the representative industries and services for which changes are taken into account and the method of calculation are given in the issues of this GAZETTE for Februa y 1957, September 1957, April 1958, February 1959 and January 1960. The indices are based on the recognised full-time basic weekly rates of wages or

minimum entitlements and normal weekly hours of work, which are generally the outcome of centrally-determined arrangements, usually national collective agreements or statutory wages regulation orders. In general, therefore, the statistics do not take account of changes determined by local negotiations at establishment or shop floor level. The indices do not reflect changes in earnings or in actual hours worked due to such factors as overtime, short-time, variations in output, etc.

2. The figures relate to the end of the month.

3. Publication of the index figures to one decimal place must not be taken to mean that the figures are thought to be significant to more than the nearest whole number.

4. Where necessary, figures published in previous issues of this GAZETTE have been revised to include changes having retrospective effect or reported belatedly.

^{*} Actual average of normal weekly hours at the index base date (31st January 1956) is shown in brackets at head of column.

1968

incidence of changes in rates of wages or hours of work in the months immediately prior to the base date (31st January 1956). In addition, there is considerable variation in the provisions of collective agreements and statutory wages regulation orders and there is therefore no common pattern for the calculation of the indices for the different industry groups.

WAGES AND HOURS

all manual workers: basic weekly and hourly rates of wages, normal weekly hours: industrial analysis: United Kingdom

[‡] The Cost of Living Advisory Committee recommended in 1962 that until a satisfactory index series based on actual prices became available half the expenditure on meals out should continue to be allocated to the food group and the other half spread proportionately over all groups, including the food group. The index for meals out for

16th January 1968 implicit in this recommendation was 121.4. Since January 1968 an index series based on actual prices has been available and indices in this series have been linked with the implicit index for meals out for 16th January 1968, to obtain indices for meals out with 16th January 1962 taken as 100.

[§] Weights which would have been used in 1968 if expenditure on meals out had been treated as in previous years (see footnote ‡ opposite). The weights actually used are given in the following line.

Index of retail prices

^{*} The statistics relate to stoppages of work due to disputes connected with terms of employment or conditions of labour. They exclude stoppages involving fewer than ten workers and those which lasted less than one day, except any in which the aggregate number of working days lost exceeded 100. The figures for 1967 are provisional and

^{**}subject to revision.

† Workers involved in stoppages beginning in one month and continuing into later months are counted, in col. (3), in the month in which they first participated, and, in col. (4), in each month in which they were involved.

[‡] From 1960 the analysis by industry is based on the Revised Standard Industrial Classification 1958.

§ This figure excludes 3,000 workers who became involved in 1961 in stoppages which began in 1960.

|| This figure excludes 2,000 workers who became involved in 1965 in stoppages which began in 1964.

¶ This figure excludes 1,000 workers who became involved in 1967 in stoppages which began in 1966.

DEFINITIONS

The terms used in these tables are defined more fully elsewhere in articles in this GAZETTE relating to particular statistical series. The following are short general definitions.

WORKING POPULATION

All employed and registered unemployed persons.

Serving UK members of HM Armed Forces and Women's Services including those on release leave.

CIVILIAN LABOUR FORCE

Working population less HM Forces.

TOTAL IN CIVIL EMPLOYMENT

Civilian labour force less registered wholly unemployed.

EMPLOYEES IN EMPLOYMENT

Total in civil employment less self-employed.

TOTAL EMPLOYEES

Employees in employment plus registered wholly unemployed.

(The above terms are explained more fully on pages 207-214 of the May 1966 issue of the GAZETTE).

REGISTERED UNEMPLOYED

Persons registered for employment at an employment exchange or youth employment office on the day of the monthly count who are not in employment on that day, being either wholly unemployed or temporarily stopped (certain severely disabled persons are excluded).

WHOLLY UNEMPLOYED

Registered unemployed persons without jobs on the day of the count, and available for work on that day.

UNEMPLOYED SCHOOL-LEAVERS

Registered wholly unemployed persons under 18 years of age not in full-time education who have not yet been in insured employment.

TEMPORARILY STOPPED

Registered unemployed persons who, on the day of the count, are suspended from work by their employers on the understanding that they will shortly resume work and are still regarded as having a job.

UNEMPLOYED PERCENTAGE RATE

Total number of registered unemployed expressed as a percentage of the estimated total number of employees at mid-year.

VACANCY

A job notified by an employer to an employment exchange or youth employment office which is unfilled at the date of the monthly count.

SEASONALLY ADJUSTED

Adjusted for normal seasonal variations.

Males aged 18 years and over, except where otherwise

Females aged 18 years and over.

ADULTS

Men and women.

Males under 18 years of age, except where otherwise stated.

Females under 18 years of age.

YOUNG PERSONS

Boys and girls.

Males aged 18-20 years (used where men means males aged 21 and over).

Employees, other than administrative, technical and clerical workers in manufacturing industries.

MANITAL WORKERS

Employees, other than administrative and clerical employees, in industries covered by earnings enquiries.

PART-TIME WORKERS

Persons normally working for not more than 30 hours per week except where otherwise stated.

NORMAL WEEKLY HOURS

Recognised weekly hours fixed in collective agreements etc.

WEEKLY HOURS WORKED

Actual hours worked during the week.

OVERTIME

Work outside normal hours.

SHORT-TIME WORKING

Arrangements made by an employer for working less than normal hours.

STOPPAGES OF WORK—INDUSTRIAL DISPUTES

Stoppage of work due to disputes connected with terms of employment or conditions of labour, excluding those involving fewer than 10 workers and those which last for less than one day, except any in which the aggregate number of man-days lost exceeded 100.

Advertisements

BRITISH GOVERNMENT CONTRACTORS

These announcements are restricted to firms and companies on the lists of contractors to HM Government departments.
