Labour turnover: Estimates based on employment surveys and new earnings surveys

Each year there are about 10 million job-changes. (This can be estimated, approximately, from the number of terminations of employment which are notified to the Inland Revenue on form P45). But this overall total cannot be analysed in any detail, and it is the purpose of this article to bring together the information about labour turnover which can be derived from other

Data on engagements and discharges in the manufacturing industries has been available for many years, but a new source of information has now been provided by the New Earnings Survey, which covers all industries and permits certain analyses to be made for occupations. age groups and regions.

Estimates from employment (L return) surveys

Every third month (February, May, August and November), in the surveys of employment in manufacturing industries carried out by the Department of Employment, employers report, on "L" returns for their establishments, the numbers of males and of females employed at the beginning and at the end of the month, together with the numbers employed at the end of the month who were not employed at the beginning of the month.

From this information for each industry, rates of engagements and of discharges and other losses (for a four-week period), expressed as percentages of the numbers employed at the beginning of the period, are derived. These figures to some extent, understate the total intake and wastage during the period, because they take no account of workers whose spell of employment in the establishment commenced after the beginning of the period and terminated before the end of the

The estimated engagement and discharge rates are published regularly in this GAZETTE and subsequently in the yearbooks of labour statistics from 1969 onwards; see for example page 167 of the February 1972 issue, giving estimates for the four weeks ended November 13 1971 and figures for 1969 in tables 79 and 80 of BRITISH LABOUR STATISTICS: YEARBOOK 1969 (see this GAZETTE, December 1971, page 1174). Figures for 1948 to 1968 are are given in table 147 of British Labour Statistics: HISTORICAL ABSTRACT 1886-1968 (see this GAZETTE, June 1971, page 532).

Such information is not collected in the other eight months, but, on the assumption that a particular month is representative of neighbouring months, rough indications of the level of turnover over a 12-month period may be obtained by taking the average of a run of four estimates of either engagement or discharge rates for four-week periods multiplied by 13.

The resulting 12-month engagement and discharge rates cover most engagements and terminations of employment at establishments in the industries during the period. Cases of workers whose employment both commenced and terminated within the period are covered, except for those mentioned above with very short spells of employment. The 12-month estimates include cases of workers with several spells of employment with different employers, or even the same employer, during the period.

Engagement and discharge rates are usually of the same order of magnitude. The difference between them is dependent on how the level of employment is changing. When, for example, there is a marked decline in employment, as in the period under review. discharges will necessarily exceed engagements and the difference between the two rates will change.

Estimates from the New Earnings Surveys

In the New Earnings Surveys 1968, 1970 and 1971 employees who had been employed with their employer for under 12 months at the time of the survey were identified. In the 1968 survey, the number of completed years in the current period of employment with the employer was reported. Also the employer reported if he had engaged the employee temporarily for a limited period of less than six months; such employees were described as "casual workers" in the survey results.

In the 1970 survey, the employer reported whether the employee had been in his employment for more than 12 months. In the 1971 survey, the employer reported whether the employee had been in his employment for 12 months or more. Analyses based on this information were published in tables 94 to 99 of the NEW EARNINGS SURVEY 1968 booklet and tables 149 to 152 of the NEW EARNINGS SURVEY 1970 booklet. The 1971 survey results will be published in the 1971 booklet.

In the NES, employers would probably not regard transfers of employees between establishments within the same enterprise as breaks in employment, but such movements are counted in the "L" return figures. Also in the NES figures, unlike the "L" return figures, no employee is counted more than once. It is thus to be expected that estimates of labour turnover from the NES will be lower than those obtained from the

In the tables, estimates from NES sources of the percentages of male and of female employees who had been with their current employer for under 12 months

in September 1968. April 1970 and April 1971 are given by industry group, by main occupational group for 1970 and 1971 only, by age-group for 1970 only and by region for 1970 and 1971 only. The industry groups are Orders of the Standard Industrial Classification: the 1958 edition for 1968 and the 1968 edition for 1970 and 1971. The main occupational groups are those defined in the December 1970 issue of this GAZETTE. The 1968 analysis by industry group also gives the percentage of employees classified as casual workers.

Estimated annual rates of engagements and discharges and other terminations per 100 employees are given for manufacturing industries in the analyses by industry group. These are averages based on "L" returns. Those for 1967 to 1968 are based on the rates for four-week periods obtained from the returns for November 1967. February, May and August 1968; those for 1969 to

1970 from the returns for August and November 1969, February and May 1970; those for 1970 to 1971 from the returns for August and November 1970 and May 1971. Because of the postal strike, no returns were made in February 1971.

Comparison of "L" return and NES estimates

Comparison of "L" return and NES estimates for manufacturing industries for roughly corresponding periods show, as would be expected, that in industries with relatively high (or low) incidences of engagements and discharges, the proportions of workers who had been with their current employers for under 12 months are relatively high (or low). The "L" return figures are generally much higher than the NES figures, for reasons already mentioned. There are exceptions among

‡ Excluding shipbuilding and ship-repairing.

females in a few industries; these arise when the coverage is different (the NES covers the whole shipbuilding industry group but the "L" returns only cover marine engineering) or the number of females is small and the NES figures have a high sampling error (for example the coal and petroleum products industry group).

There also seems some connection, but not a very significant one, between the proportion of casual workers and the proportion who had been with their employers for under 12 months.

The analyses by occupation show similar patterns in the two periods. The figures for males in non-manual occupations are lower than those for manual occupations.

For both males and females, those for unskilled occupations are higher than those for semi-skilled and for skilled manual occupations. Those for part-time workers are higher than those for full-time workers. The analysis by age-group shows the figures for younger age groups are the highest. Variations between regions were small, particularly among females, and do not seem to be related to inter-regional variations in unemployment.

Comparisons between the different periods

Although the two kinds of survey provide quite distinct measures of labour turnover, the relationship between

^{*} The rates given are averages of rates for four week periods derived from the L returns for August 1969, November 1969, February 1970, May 1970, multiplied by 13. The rates express the engagements/discharges in 12 months as percentages of the total number of employees employed.

† Excluding shipbuilding and ship repairing.

the figures appears to remain fairly constant from period to period. The engagement rates were about twice the NES figures in the second and third period and about $1\frac{3}{4}$ times the NES figures in the first period.

The New Earnings Surveys show a steady decline in labour turnover between 1968 and 1971. The engagement rates also show a decline between 1969 and 1971. Such changes are to be expected in a period of rising unemployment. The apparent rise in the engagement rates between 1968 and 1970 is perhaps surprising, but it should be noted that the discharge rates show a greater rise over the same period.

It should be remembered that the 1968 survey related to September, whereas the later surveys related to April. It is likely that the proportion with under 12 months service fluctuates from month to month, and is generally higher in September than in April; it will depend partly on the numbers in employment who only work for part of the year.

The extent to which the annual rates derived from "L" returns include cases where employment began and terminated within the 12-month period is probably also important, especially if the volume of these short spells varies with the prevailing economic conditions.

industrial training boards on export training. Two

Training course aid to export performance

The training of export office staff can pay rich dividends in improving efficiency and clerical work involved in exporting, and in eliminating costly delays. A high proportion of such delays in export transaction arise from errors in the office, and one of the reasons for these mistakes is that the export world is never static. One example of the changes that occur has been the introduction and development of container transport, which has led to the abandonment of conventional methods of shipping, and the need for training and retraining of clerical staff if success is to be sought in export performance.

Three years ago the Department of Employment launched a short, intensive course on export office procedure aimed to help companies in the United Kingdom to achieve greater efficiency as exporters.

Quick appreciation of value

Since then over 700 companies have sent about 2,000 of their staffs for training, which has taken place in different parts of the country. Evidence of the success of these courses has been demonstrated by the way company training officers have been quick to appreciate their value in the rapid and efficient training of their staffs, and by the support they have received from those with experience of work in export offices.

The scheme arose out of recommendations by the Central Training Council's Commercial and Clerical Training Committee in its report Training of Export STAFF (see this GAZETTE, December 1968, page 992). It has the support of the Department of Trade and Industry, the banks, chambers of commerce, and includes documentation procedure recommendations by the Simplification of International Trade Procedure Board.

Two objectives

The department's initiative in introducing the course was taken at the request of the joint committee of industrial training boards on export training. Two pilot courses were held at the end of 1969. These had two objectives: first, that office staff should be given the basic knowledge for them to undertake efficiently the documentation work essential for export, and secondly for them to be able to pass on this knowledge in the most effective manner to colleagues in their offices who had not been trained.

These pilot courses showed that basically the ideas used were right, but some points needed to be resolved. The syllabus underwent important changes, and this meticulous preparation has resulted in the growing success of the course and its results.

The department was willing to launch this venture because it not only had expert trainers readily available, but was able to provide adequate facilities for accommodating courses at its national network of government training centres. Its objective in compiling the course was to keep it free of frills and padding and to compress the complex syllabus into five days.

Few comparable alternatives

Apart from three-year courses at polytechnics for students studying for examinations of the Institute of Export and the Society of Shipping Executives, there appears to be few alternative courses comparable with the export office procedure course in either content or length. The latter consideration is most important if busy offices are to release staff for training.

Each course run by the department is limited to 24 students, a number which it is considered gives an opportunity for every student to derive the maximum benefit from the training. There is a consistently high demand for places, and although devised specifically for clerical staffs in export offices, it is not uncommon to find managers and managing directors attending.

Overseas interest

The mobility which has been built into the scheme enables a course to be arranged quickly in areas where there is a high demand. But interest is not confined to the United Kingdom: it has been aroused overseas. Some English nationals working abroad have found it worthwhile to return home to brush up or improve their expertise in export office procedure. One student from the Far East, later returned to establish an export office for his employer in Japan.

There are various reasons for companies using this facility. Sometimes firms cannot provide up-to-date internal courses for their staff, or have limited experience to enable them to cover the subject adequately. But whatever the reasons training problems in export offices are being solved through the department's course, which offers quick and comprehensive training at a modest fee of £28 a student. Students must, however, arrange their own accommodation.

The course consists of 37 sessions, with much of the time devoted to discussion and practical work. Students work in syndicates, and examine the subject both theoretically and practically. After a general look at what is involved in exporting, the subject is dealt with in detail. The export office is divided into sections sales and shipping—the functions of which are carefully examined to identify the source and flow of the complex system of documentation.

Different terms and conditions of sale that export staff may meet and the various methods of payment adopted by exporters are dealt with early, and a study of the law of simple contracts includes the sale of goods, contracts of affreightment, and agency contracts.

Practical exercises

There is a brief introduction to marine insurance so that any terms likely to puzzle clerical staff can be explained. Practical work includes the completion of a Lloyd's certificate of insurance. Other basic documents are given close attention. A session on documentary letters of credit is immediately followed by another on bills of exchange. Practical exercises are included each day to consolidate understanding.

The growing importance of transport by container is examined in a session on this method of freighting, in which students learn how its introduction increases shipping options on all modes of transport. The advantages and disadvantages of road transport and air freight are examined, and practical help is given in making freight and marine insurance calculations. Simple formulas and plenty of practice ensures that the student returns to his office not only understanding how the calculations work, but with an ability to complete them himself.

Other important features include instruction on preparing algorithms—flow charts designed to set out complex information in a graphic way to enable a newcomer to a subject to take the correct action immediately. These charts help in handling complicated documents, such as the air way bill, or guide students in the organisation of complex consular requirements.

Arising from the part of the course on aligned documentation, an approach was made by the Simplification of International Trade Procedures Board (SITPRO) for the Department of Employment to mount a special course for managers on the aligning of all their internal documents with external shipping and government controlled forms. The first course will be held in Birmingham on July 25/26/27 next.

Raising standard of communication

Students are also instructed on how to pass on the benefits they have acquired from the course to their colleagues. In this way the training is aimed at raising the standard of export knowledge and techniques of communication.

Further information about the export office procedure course and other courses can be obtained from the Senior Training Officer, Department of Employment, TE4, Ebury Bridge House, Ebury Bridge Road, London, S.W.1. (Tel. No: 01 730 9661, ext. 49).

Bigger incentives for job mobility

Big financial incentives are being offered by the government to encourage unemployed or redundant workers to move away from home to take jobs in another area.

The Resettlement Transfer Scheme, one of three run by the Department of Employment, has been revised and renamed the Employment Transfer Scheme.

Under it workers trained at a government training centre may qualify for better benefits (including a rehousing grant of £600) and additional help (including a rehousing grant of £400) will be available for those who live in development or intermediate areas.

Entitlements on transfer

All workers who transfer will be entitled to:

- -free return fare for interview before being engaged by an employer;
- —free fare for journey to start the new job;
- -settling-in grant of £6.00, payable to married or single workers as soon as they start in the new
- -free fares for themselves or near relatives in case of sickness or other domestic emergency.

Workers who continue to maintain dependants in the home area will be entitled to:

- -lodging allowance of £6.58 a week (previously £4.55) towards the cost of lodgings. This ceases when the worker is joined by his dependants permanently;
- -continuing liability allowance of up to £6.58 a week (previously £4.55) payable where a worker is still liable for rent, rates, mortgage interest etc. in the old area, after he has moved his family to accommodation in the new area;
- -six assisted fares a year to enable visits to be paid home. The worker is expected to pay the first 62½p of each fare.

Additional benefits

Workers who decide to stay in the new area for good with their dependants are entitled to additional benefits:

- —the approved cost of removal of normal household furniture and effects;
- —free fares for dependants to join the worker in the new area;

- —a rehousing grant on the completion of household removal to unfurnished accommodation as follows:
- (a) £600 to anyone moving home on taking his first job in the trade in which he had been trained under the government's vocational training scheme, provided that the training course was not less than 12 weeks and was in a basic craft skill or in a specialised skill, and that the new employment was started within six months of the end of the training course;
- (b) £400 to a worker who before transfer lived in a development or intermediate area whether the move is within or outside an assisted
- (c) £100 to all other workers;
- —grants towards the cost of solicitors' and house agents' fees arising from the sale and/or purchase of a house on moving to a new area up to a maximum of £145 (previously £135) for either sale or purchase, or of £240 (previously £220) where both sale and purchase are involved.

Disturbance allowance

Single workers who before transfer live in development or intermediate areas will be paid a disturbance allowance of £2 a week for up to a year.

Assistance under the new scheme may continue for two years from the date of transfer.

To qualify for benefits workers must, in addition to being unemployed or liable to redundancy in six months:

- —transfer beyond daily travelling distance of their homes to full-time jobs in new areas;
- -not be entitled to similar allowances from their

Workers who do not live in assisted areas before transfer must also:

- —be without early prospects of a job in their
- —have their new job approved by the Department of Employment as being work which will provide prospects of permanent resettlement and for which there is no suitable labour available locally;
- —be willing to move permanently to the new area, or if they wish the transfer to be regarded as temporary, be prepared to return home as soon as suitable work becomes available near their homes.

They will not qualify if they:

- -are seasonal workers who transfer to seasonal work:
- -are not domiciled in Great Britain;
- -transfer anywhere outside Great Britain;
- -take a job where the starting pay exceeds £2,650 a year or £50.96 a week;
- -take jobs in the building, civil engineering or constructional engineering industries beyond daily travelling distance of their employers headquarters, main yard or workshop, or established branch office.

The other two transfer schemes to which the improved benefits may apply, are:

Key workers scheme—designed to help employed workers who transfer either permanently or temporarily, beyond reasonable daily travelling distance of their homes to key posts in establishments which their employers are setting up or expanding in development or intermediate areas. There is no upper income limit for this scheme.

Nucleus Labour Force Scheme—designed to help unemployed workers recruited in areas of high unemployment by firms preparing to set-up there. Assistance is given to help them to move temporarily to the parent factories of these firms, so that when trained they can return to work in the new establish-

Could your export office be more efficient?

Exporting offices must be equipped to meet the challenges of Britain's exporters in the 70s. Is yours?

To help you meet these challenges the Department of Employment has set up a course in exporting office procedure for staff in exporting departments.

The course covers the procedure, documentation and particular problems associated with exporting—such as containerisation and

The course also explains the basic principles of passing on information, thus helping those taking the course to implement export procedures within their own organisation.

All applicants should be experienced in clerical work. Each course lasts five days, and the fee is £28 per place. The following courses are planned.

England

May 8th	Sheffield	Government Training Centre
May 15th	London	CYE E Tottenham Court Rd.
May 15th	Norwich	Government Training Centre
May 22nd	Leicester	Government Training Centre

Courses will be held at Hillington (Glasgow) Government Training Centre on May 15th and June 12th Courses will also be held on May 1st at Aberdeen Employment Exchange.

For further details or applications please write to: The Senior Training Officer, (TE 4), Department of Employment, Ebury Bridge House, Ebury Bridge Road, London S.E.1, or to the Regional Office of the Department.

Quarterly statistics of total employment September 1971

Great Britain

The estimated numbers in the working population in September 1971 were: 15,885,000 males and 9,001,000 females, a total of 24,886,000. Between June and September 1971 there was an increase in the working population of about 59,000 (18,000 males and 41,000 females). There was a decrease in civil employment of about 64,000 (a decrease of 70,000 males being partially offset by an increase of 5,000 females). After adjustment for normal seasonal variations there was a decrease of about 62,000 in the working population (all males). The number in civil employment fell by 143,000 (125,000 males and 18,000 females).

In the twelve months from September 1970 to September 1971 the working population decreased by about 214,000 (176,000 males and 38,000 females). The number in civil employment fell by about 444,000 (363,000 males and 81,000 females).

The number in the main categories, the seasonally adjusted

figures and the corresponding changes since September 1970 and June 1971 are given in table 1.

Standard regions

The numbers in the main categories of the civilian labour force in each standard region in September 1971 are given in table 2 and the changes since June 1971 and September 1970 in tables 3

Between June and September 1971 civil employment decreased by 90,000 in South East and 22,000 in East Anglia Regions. There were small increases in East Midlands, Yorkshire and Humberside and North West Regions and an increase of 26,000 in

In the twelve months form September 1970 to September 1971 there were decreases in civil employment of 114,000 in South East and 70,000 in North West Regions and 61,000 in Scotland. There was an increase of 22,000 in South West Region.

^{*} The Great Britain figures include Civil Servants stationed outside the United Kingdom and the regional figures have been rounded individually so regional figures do not add up to the national figures.

† The number of employers and self-employed are assumed to be unchanged.

UNEMPLOYED COLOURED WORKERS

The table below gives the figures, and location of unemployment by region, of coloured workers who are registered at local employment offices and careers offices in Great Britain. The basis of the count was explained in the July issue of this GAZETTE, when, for the first time, comprehensive figures were available.

The count on February 14, 1972 showed an increase of 1,614, compared with the figures for November 8, 1971 and represented 2.4 per cent. of all persons wholly unemployed, compared with 2.5 per cent. in November.

Registered wholly unemployed persons born in, or whose parent or parents were born in, certain countries of the Commonwealth: February 1972

AVERAGE RETAIL PRICES OF ITEMS OF FOOD

Average retail prices on February 22, 1972 for a number of important items of food, derived from prices collected for the purposes of the General Index of Retail Prices in 200 areas in the United Kingdom, are given below.

Many of the items vary in quality from retailer to retailer and partly because of these differences there are considerable variations in prices charged for many items. An indication of these variations is given in the last column of the following table which shows the ranges of prices within which at least four-fifths of the recorded prices fell.

The average prices are subject to sampling error, and some indication of the potential size of this error was given on page 259 of the March 1972 issue of this GAZETTE.

RETAIL PRICES INDICES FOR ONE-PERSON AND TWO-PERSON PENSIONER HOUSEHOLDS: ANNUAL REVISION OF WEIGHTS

WEIGHTS TO BE USED IN 1972

In its report dated 17 May 1968* the Cost of Living Advisory Committee recommended that two special indices of retail prices should be compiled for one-person and two-person pensioner households at present excluded from the weighting pattern of the General Index of Retail Prices. The committee recommended that the proposed indices should at present exclude housing costs, and that they should be chain indices constructed in the same way as the General Index of Retail Prices, based on January 1962 taken as 100. A description of the new indices was given in an article on pages 542-547 of the June 1969 issue of this GAZETTE.

In calculating the indices during 1972 the weighting patterns to be used are based on the expenditure of pensioner households in the three years ended June 1971 repriced at January 1972 prices. These weights are given below in table 1. If comparisons are made between these weights and those for the General Index of Retail Prices which were published on page 000 of the March 1972 issue of this GAZETTE, it should be remembered that the weights used for the General Index of Retail Prices include a weight for housing. To make possible proper comparison of weights, the group weights for 1972 of the General Index of Retail Prices excluding housing are given below in table 2.

SPECIAL EXEMPTION ORDERS

EMPLOYMENT OF WOMEN AND YOUNG PERSONS:

The Factories Act 1961 and related legislation place restrictions on the employment of women and young persons (under 18 years of age) in factories and some other workplaces. Section 117 of the Factories Act 1961 enables the Secretary of State for Employment, subject to certain conditions, to grant exemptions from these restrictions for women and young persons aged 16 or over, by making special exemption orders in respect of employment in particular factories. The number of women and young persons covered by Special Exemption Orders current on March 31, 1972 according to the type of employment permitted* were:

Type of employment permitted by the Order	Women 18 years and over	Boys over 16 but under 18 years	Girls over 16 but under 18 years	Total
Extended hours† Double day shifts‡ Long spells Night Shifts Part-time work§ Saturday afternoon work Sunday work Miscellaneous	27,550 39,531 10,606 20,366 18,599 7,015 28,022 2,628	1,183 2,553 467 1,253 102 282 1,078 193	2,302 2,610 1,467 54 418 1,405 90	31,035 44,694 12,540 21,619 18,755 7,715 30,505 2,911
Total	154,317	7,111	8,346	169,774

* The numbers shown are those stated by employers in their applications. The actual numbers of workers employed on conditions permitted by the Orders may however vary from time to time.

† "Extended hours" are those worked in excess of the limitations imposed by the Factories Act in respect of daily hours or overtime.

‡ Includes 13,610 persons employed on shift systems involving work on Sundays, or on Saturday afternoons, but not included under those headings.

§ Part-time work outside the hours of employment allowed by the Factories Act.

AN EXPERIMENTAL MONTHLY INDEX OF WAGES AND SALARIES PER UNIT OF OUTPUT IN MANUFACTURING INDUSTRIES

This series was introduced in an article on page 360 of the April 1971 issue of this GAZETTE. The most recent figures available are contained in the table below. Quarterly averages of the monthly

figures in the series are now presented in line 3d of table 134 in the statistical series section of this GAZETTE (see page 422).

News and Notes

FILM ON INDUSTRIAL RELATIONS agreements. More than 51 million copies workers who would be bound by the ACT BREAKS SALES RECORD

The Department of Employment's film introducing and explaining the Industrial Relations Act has broken all records for sales and hirings by the Central Film Library.

Between September, when it was released, and the end of March 290 copies had been sold, compared with a previous best of 250 copies achieved after seven years.

Hirings in the same period have been nearly 2,000, the fastest booking rate ever made by the library.

The film "The Industrial Relations Act— An Introduction", which is in colour, runs for 18 minutes. It is the first in a series being produced through the Rank Short Films Group by the Department of Employment in association with the Central Office of

Information. It is intended primarily for the further education/training course/seminars market, and gives a straightforward exposition of the principles and main provisions of the Act with the aid of symbols and diagrammatic illustrations.

Produced by Ian Latimer, written by Graham Turner, and presented by Derek Hart, it is issued complete with a full text of the script. It can be purchased for £47.25 a copy. The minimum hiring charge is £1.60 (reference No UK3106).

Four new films on different aspects of the Act, which became law in August last year, will be available next month, following a preview on May 9. Three, "The Act and the individual", "The Act and the trade union" and "The Act and the Employer", explain the institutions, rights and obligations and procedures of those parts of the Act affecting particular sections of the community.

The fourth "Collective bargaining and agreements", examines the effects of the Act on collective bargaining and outlines procedures for handling various types of disputes.

Enquiries about the sale or hiring of these films should be made to the Central Film Library, Government Building, Bromyard Avenue, Acton, London W3 7JB, and from its associate libraries, the Scottish Central Film Library, 16-17 Woodside Terrace, Charing Cross, Glasgow C3, and the Central Film Library of Wales, 42 Park Place, Cardiff CF1 3PY.

In addition to this series of films, the Department of Employment has published a guide to the Act and four other explanatory booklets, one of which outlines the Act and the others cover registration, the

of these booklets have been distributed to the public since last autumn. The department has also published a Code of Industrial Relations Practice (see this GAZETTE, January 1972, page 6), which is obtainable through HMSO or booksellers, majority of the workers favour the introprice 15p.

CIR TO EXAMINE APPROVED **CLOSED SHOP APPLICATION**

The Commission on Industrial Relations has been asked by the National Industrial Relations Court to examine an application for an approved closed shop in the shipping industry.

Parties named in the reference by the Court, which was made under the Industrial Relations Act 1971, are the National Union of Seamen and the British Shipping Federation Limited.

An approved closed shop agreement is one between one or more employers-or organisation of employers—and one or more registered trade unions in which included in their terms and conditions of union. employment the provision that they shall be, or shall become, a member of the union(s) or-by special exemption-pay an appropriate contribution to an agreed charity.

To operate a lawful approved closed shop agreement the parties concerned (in other words the employer, employers, or employers' association, whether registered or not, and a registered trade union or unions) must jointly make an application to the Industrial Court; and the need for such an agreement must be examined and accepted by the CIR.

Before the commission can approve an orderly and effective industrial relations; to maintain reasonable terms and conditions of employment and continuity of employment; to ensure that collective agreements are honoured; and to enable union organisation to be effective. It must also be satisfied that it is not possible for these conditions to be fulfilled under an agency shop, as distinct from a post-entry closed shop, agreement.

If, after examining the situation, the CIR concludes that a post-entry closed shop agreement is justified and ought to be approved, it will report its conclusions to months during which workers concerned rights of the individual and agency shop ment has the support of the majority of the about the earnings of those affected by

agreement.

In the absence of an application for a ballot (which must be supported by not less than one-fifth of the workers affected), or, if the CIR arranges a ballot and the necessary duction of a post-entry closed shop agreement, the Court will make an order enabling the employer, or employers, to operate the post-entry closed shop agreement for those workers covered by the application.

If a ballot is held and the proposed post-entry closed shop agreement does not secure the required majority, the Court will not approve the proposed post-entry closed shop agreement, and will not entertain any further application for an approved post-entry closed shop for the workers concerned for the following two years.

Where a post-entry closed shop agreement has been approved by an order of the Court the employer may refuse to engage, dismiss or penalise a worker who-in the absence of a conscientious objection workers covered by the agreement have refuses to belong to the registered trade

NEW EARNINGS SURVEY 1972

Now that the results of the New Earnings Surveys held in 1970 and 1971 are available, there is to be a major review of all surveys of earnings carried out by the Department of Employment. This review will be made in collaboration with the Confederation of British Industry, the Trades Union Congress and others. The purpose of the review is to re-examine how the requirements of the government, industry and other users of earnings statistics should be met, with the minimum of form-filling and inconvenience application it must be satisfied that a postentry closed shop is necessary to secure of surveys that are practicable and necessary and their coverage, form and frequency. The programme of departmental surveys of earnings from 1973 onwards will be determined by the review.

Meanwhile in 1972, the survey programme will be the same as in 1971. In particular, in the New Earnings Survey 1972, the department is collecting from employers information about the earnings of a sample of all employees in Great Britain in April. Apart from some changes in layout, the survey form is the same as the shortened and simplified one, which was used successfully in the 1971 survey. the Industrial Court. The Court will then It will provide the essential minimum of allow a period of between one and three statistical information (not available from other sources) which the government needs may seek to have a ballot to determine about the current earnings of employees in whether the post-entry closed shop agree- each industry and in the main occupations,

regulation orders and about the numbers under training in all industries.

The forms are being sent to employers from April onwards, when the employees in the sample have been located in the course of the exchange of national insurance contribution cards in the months March to May. As before, the name of the employee to which a form relates is shown only on a perforated slip which the employer may tear off before returning the completed form. This arrangement provides an additional safeguard to the confidentiality of the information about individuals provided solely for the purpose of compiling statistical analyses by the department. The main results of the survey will be published in the GAZETTE from November 1972 onwards.

CIR RECOMMENDS ABOLITION OF WAGES COUNCIL

The Commission on Industrial Relations, in its second report on industrial relations and collective bargaining in the catering industry (HMSO, price $37\frac{1}{2}$ p), recommends that discussions about the abolition of the Industrial and Staff Canteen Undertakings Wages Council should be started by the Secretary of State for Employment with the organisations concerned.

The commission says that in its view there is a strong case for the abolition of the council. Its inquiries show clearly that there are already extensive and firmly established collective bargaining arrangements in the industry, and it makes suggestions for further development.

The recommendation is based on the two main findings, from a survey conducted by the CIR in the industry. These are: (i) that voluntary collective bargaining on pay and conditions already covered 60 per cent. of employees, and (ii) only about three per cent. of employees had to have their pay increased following a 20 per cent. increase in the statutory minimum rates in November 1970. In effect, about 97 per cent. of employees were already being paid at or above the new statutory rates. In the London area the average rate is almost 75 per cent. above them, and in other areas of the country it is almost 50 per cent. higher.

In general, those employers with well developed collective bargaining machinery felt the wages council to be irrelevant, although the remainder thought it could still be valuable in fixing terms and conditions of employment. Two of the three staff, the training of operatives, loom main unions favoured abolition, whilst the third thought the case merited examina-

The report suggests ways in which collective bargaining could be extended in the industry, both in directly-run and contractor-run catering units. It points out that the commission had found in a number of catering units already covered by collective bargaining inadequate or ill-defined procedures for dealing with grievances, adding "it is important in our view that satisfactory arrangements should be available to catering workers for pursuing grievances and other matters."

A further weakness which the com-

major collective agreements and wage mission encountered frequently in its studies was the absence of any representation of catering workers in the general shop steward organisation for the establishment. Where directly run units are included as an integral part of the collective bargaining arrangements for the establishment as a whole, the catering shop steward should, the report urges, play a full part in the trade union organisation of the establishment.

TRAINING DEVELOPMENTS

From April 10 employers within the scope of the Food, Drink and Tobacco Industry Training Board will be liable to a levy equal to 0.7 per cent. of their payroll in the year ended April 5, 1972 under proposals by the board approved by the Secretary of State for Employment (S.I. 1972 No. 361 HMSO 8p). Employers whose total payrolls are less than £30,000 will be exempt.

The previous levy was 0.8 per cent., and the exemption limit £17,500.

The levy will be used to make grants mainly for systematic training, that is, training planned to provide for the overall needs of the firm and the trainee. Grant is also available for a number of specific items including the training and employment of training staff, training in industrial relations and export marketing, management development, group training schemes, and training research and development, all of which the board wishes to encourage.

There is a similar, though separate grant scheme for small firms, intended to encourage systematic training in such firms, and to make grants more readily available to them.

Carpet industry levy

Employers within the scope of the Carpet Industry Training Board will be liable to a levy equal to 0.8 per cent. of their payroll in the year ended April 5, 1971 under proposals by the board approved by the Secretary of State for Employment.

The order approving the proposals came into operation on April 7.

Those employers who on April 5, 1971 employed fewer than 26 persons will be exempt from the payment of the levy. This compares with a rate of 0.85 per cent., and an exemption limit of fewer than 11 employees in the previous levy.

The levy will be used to make grants for a wide range of training activities including the training and employment of training tuners and mechanics, managers and supervisors, clerical staff and commercial apprentices, sales staff, craft apprentices, and shop stewards.

In addition, grant is available for such items as the employment of consultants, safety, first aid and firefighting courses, correspondence courses, research, and surveys of training needs.

Two boards reconstituted

The Carpet Industry Training Board and the Knitting, Lace and Net Industry Training Board have been reconstituted, both for a further three years. This is the third term of office for each board.

Levy on clothing and allied products

Employers within the scope of the Clothing and Allied Products Industry Training Board will be liable for a levy equal to 0.9 per cent. of their payroll in the year ended April 5, 1972 under proposals by the board approved by the Secretary of State for Employment.

The order approving the proposals (SI 1972, No 496, HMSO 8p) came into operation on April 28.

The first £25,000 of payroll is to be disregarded for assessment purposes, and where the levy is less than £10 this will not be collected.

The levy will be used to make grants to encourage a systematic approach to training, and for its application in the form of training programmes for a wide range of employment categories.

In addition, grant is payable to encourage certain specific items such as the training and employment of training staff; the training of craftsmen, supervisors, foremen, and shop stewards, and for group training schemes and research.

EMPLOYEES IN EMPLOYMENT

A new method of obtaining the monthly estimates of employees in employment in the index of production industries has been introduced. The new method involves a direct comparison of employment levels in the current month with the previous June. This provides a ratio of change which is applied to the June estimates of employees in employment to produce estimates for the current month. The method used until now provided a ratio of change by comparing the current with the previous month's levels of employment.

These changes have necessitated revisions to the monthly estimates from July 1971 given in table 103 of the March 1972 issue of this GAZETTE. The corresponding estimates for individual industries (Minimum List Headings) from July 1971 onwards have now been revised on the basis of the new method applied to the annual (June) employment estimates (see page 147 of the February issue of this GAZETTE) and are published in the monthly statistics section of this issue.

Revisions have also been made to the tables of overtime and short-time (table 120) and of hours of work (table 121) from July 1971 onwards.

BANK STAFF REPRESENTATION REFERRED TO CIR

The question of establishing machinery for collective bargaining and consultation for clerical and managerial staff at Williams & Glyn's Bank Limited, and the most appropriate form of organisation of the staff for these purposes, has been referred to the Commission on Industrial Relations by the Secretary of State for Employment.

The reference has been made following a request by the bank for the assistance of the CIR to enable it to set up effective consultative and negotiating arrangements with its staff, some of whom are members of the National Union of Bank Employees and some members of Williams & Glyn's Staff Association.

When cases are referred to the commission by the Secretary of State it conducts an enquiry and reports back to him. The reference has been made under the Industrial Relations Act, but there is no provision in the Act for recommendations in reports on references by the Secretary of State to be legally enforceable. Implementation is a matter for the parties.

It is the second reference to the commission to be made by the Secretary of State under the Act. The first, relating to industrial relations in multi-plant undertakings, was made last November (see this GAZETTE, November 1971, page 1036).

Williams & Glyn's Bank Ltd was formed from the merger of three former banks, Glyn, Mills & Co, whose staff was represented by the Glyn Mills Staff Association, the National Bank Limited, and Williams Deacon's Bank Limited, both of whose staffs were represented by the National Union of Bank Employees (NUBE). Since the merger, NUBE has sought sole bargaining rights.

PREVENTING ACCIDENTS IN **ALUMINIUM CASTING**

Precautions to be taken against the possibility of explosions during vertical semicontinuous and continuous casting of aluminium are described in a report issued by the Department of Employment (HMSO

This is the first report of a sub-committee of the Joint Standing Committee on Health, Safety and Welfare in Foundries, and is aimed at the practical men—the managers and operators. It is generally confined to matters of plant operation.

Precautionary measures recommended in specific circumstances, it points out, are the result of empirical work and practical experience, and are vital to all those directly or indirectly concerned with these processes.

It emphasises that general safety precautions, for example the wearing of protective clothing, the use of shields and the keeping of unauthorised personnel away from production areas are still essential. Senior staff are urged to adopt the precautions described in the report and acquaint themselves with the work of George Long, Paul D. Hess and Kenneth J. Brondyke on the subject. The need for the adequate training of all operators to ensure that they At April 19 1971 the number of persons are proficient in emergency procedures is also emphasised.

The report also describes the safest known methods of tackling such problems as sticking ingots and metal run-out, and gives some advice on water cooling systems and the provision of emergency services.

In short, starting with plant preparation it is a safety guide through the process. The report warns that even if all the precautionary methods are adopted there can be no guarantee that explosions will never occur: but it does say that violent explosions have not been recorded to date, when the recommended precautions have been taken.

The sub-committee's remit was to carry out an extensive study of the causes of explosions during continuous casting processes. The report says: "This subject is complicated by the variety of metals and alloys cast and the differing plants and processes in use, but the main difficulty arises from the fact that the conditions which lead to the somewhat rare, violent explosions have not yet been elucidated.

"Consequently, much research work of an advanced theoretical nature still remains to be done in order to determine these dangerous conditions."

Meanwhile, as the sub-committee had found, operators who were unaware of some of the precautions that clearly should be observed in continuous and semi-continuous vertical casting of aluminium. it concluded that the available knowledge on these processes should be published as quickly as possible, and not await the final

outcome of its work.

INDUSTRIAL FATALITIES AND DISEASES

In February, 37 fatalities were reported under the Factories Act, compared with 45 in January. This total included 20 arising from factory processes, 14 from building operations and works of engineering construction, and three in docks and warehouses.

Fatalities in industries outside the scope of the Factories Act included four in mines and quarries reported in the four weeks ended February 26, compared with six in the five weeks ended January 29. These four included two underground coal mine workers and two in quarries, compared with one and four a month earlier.

In the railway service there were four fatal accidents in February and one in the previous month.

In February, four seamen employed in ships registered in the United Kingdom were fatally injured, compared with 17 in January.

In February, 15 cases of industrial diseases were reported under the Factories Act. These comprised six of chrome ulceration and nine of lead poisoning.

DISABLED PERSONS REGISTER

registered under the Disabled Persons (Employment) Acts, 1944 and 1958, was 620,691 compared with 634,336 at April 20,

At February 14, 1972 there were 92,648 disabled persons on the register who were registered as unemployed of whom 82,739 were males and 9,909 females. Those suitable for ordinary employment were 71,812 males and 8,335 females, while there were 12,501 severely disabled persons classified as unlikely to obtain employment other than under special conditions. These severely disabled persons are excluded from the monthly unemployment figures given elsewhere in the GAZETTE.

In the five weeks ended February 9. 1972, 5,278 registered disabled persons were placed in ordinary employment. They included 4,310 men, 886 women and 82 young persons. In addition, 237 placings were made of registered disabled persons in sheltered employment.

INDUSTRIAL TRAINING AID FOR FIRMS IN ASSISTED AREAS

The government's decision to extend intermediate area status to the remaining parts of Wales and the North West and Yorkshire and Humberside Regions was announced by the Chancellor of the Exchequer in his Budget speech, and the Department of Employment's full range of training assistance is now available to firms in these new areas.

There are now three schemes of financial aid for employers in the assisted areas, who train workers in the basic skills necessary for their particular job (see this GAZETTE, March 1972, page 284). The main scheme is firmly linked to the creation of more jobs in the assisted areas.

The newly designated intermediate areas

C:
Yorkshire & Humberside Region: Attercliffe,
Barton-on-Humber, Batley, Bradford, Brighouse,
Chapeltown, Dewsbury, Driffield, Elland, Gainsborough, Grimsby, Halifax, Harrogate, Haworth,
Hebden Bridge, Horncastle, Horsforth, Huddersfield,

Selby, Sheffield, Shipley, Skegness, Skipton, Sowerby
Bridge, Spen Valley, Stanningley, Stocksbridge,
Tadcaster, Wetherby, Woodhouse, Yeadon (formerly
Guiseley), York.

North West Region: Altrincham, Ashton-in-Makerfield, Ashton-under-Lyne, Atherton and Tyldesley, Bamber Bridge, Blackpool, Bolton, Bury, Buxton, Chapel-en-le-Frith, Chester, Chorley, Clitheroe, Congleton, Crewe, Denton, Eccles, Failsworth, Farnworth, Fleetwood, Glossop, Golborne, Heywood, Hindley, Horwich, Hyde, Irlam, Kirkham, Lancaster, Leigh, Levenshulme, Leyland, Littleborough, Lytham, Macclesfield, Manchester, Marple, Middleton, Milds Newton Heath, Newton Ie Willows (formerly Earlestown), Northwich, Oldham and Chadderton, Openshaw, Ormskirk, Preston, Prestwich, Radcliffe, Ramsbottom, Rochdale, Royton, Saddleworth, Salford, Sandbach, Shaw, Skelmersdale (excluding that part which lies within the designated area of Skelmersdale New Town), Southport, Stalybridge, St Anne's-on-the-Sea, Standish, Stockport, Stretford, Swinton, Thornton Cleveleys, Warrington, Westhoughton, Wigan, Wilmslow, Winsford, Withington, Worsley, Wythenshawe. North West Region: Altrincham, Ashton-in-Makerfield, Ashton-under-Lyne, Atherton and

Wales: Buckley, Chepstow, Colwyn Bay, Flint, Holywell, Llandudno, Mold, Monmouth, Rhyl, Shotton.

UNEMPLOYMENT BENEFIT

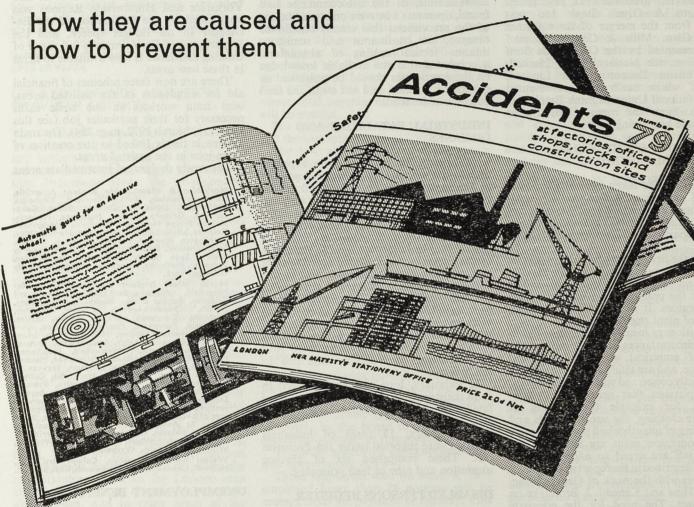

For the period of 13 weeks ended March 3. 1972 expenditure on unemployment benefit in Great Britain (excluding cost of administration) amounted to approximately £72,364,000. During the 13 weeks ended December 3, 1971, the corresponding figure was £58,761,000 and during the thirteen weeks ended March 5, 1971 it was £42,586,000.

CORRECTION

In table 2 on page 248 of the March issue the DE ratio rate for 1966 in the North West region should read 1.069, not 10.69, and the Census ratio rate for 1961 in East Anglia 0.802.

DEPARTMENT OF EMPLOYMENT

Accidents

Based on incidents notified under the Factories Act 1961, and the Offices, Shops and Railway Premises Act 1963

This well illustrated booklet contains descriptions of accidents and gives details of safety precautions applicable to factories, offices, shops, docks and construction sites.

Monthly Statistics

SUMMARY

Employment in Production Industries

The estimated total number of employees in employment in industries covered by the index of industrial production in Great Britain at mid-February 1972 was 10,090,100 (7,445,100 males and 2,645,200 females). The total included 8,150,900 (5,671,600 males and 2,479,400 females) in manufacturing industries, and 1,186,700 (1,101,300 males and 85,400 females) in construction. The total in these production industries was 52,000 lower than that for January 1972. The total in manufacturing industries was 36,300 lower than in January 1972. The number in construction was 14,200 lower than in January 1972.

Unemployment

The number of registered wholly unemployed excluding school-leavers in Great Britain on March 13 1972 was 917,701. After adjustment for normal seasonal variations, the number in this group was 886,300, representing 3.9 per cent. of employees compared with 872,200 in February 1972.

In addition, there were 7,081 unemployed school-leavers and 46,826 temporarily stopped workers registered, so the total registered unemployed was 971,608, representing $4\cdot3$ per cent. of employees. This was 602,940 lower than in February when the percentage rate was $6\cdot9$.

Among those wholly unemployed in March, 292,233 (31.7 per cent.) had been registered for not more than 8 weeks compared with 310,791 (33.7 per cent.) in February; 97,450 (10.6 per cent.) had been registered for not more than 2 weeks, compared with 110,530 (12.0 per cent.) in February.

Between February and March, the number temporarily stopped fell by 602,515, and the number of school-leavers unemployed fell by 1,293.

Vacancies

The number of unfilled vacancies for adults at local employment offices in Great Britain on March 8, 1972 was 118,520; 6,403 higher than on February 19, 1972. After adjustment for normal seasonal variations, the number was 126,300, compared with 125,800 in February.

Including 39,138 unfilled vacancies for young persons at youth employment service careers offices, the total number of unfilled vacancies on March 8, was 157,658; 13,193 higher than on February 9, 1972.

Overtime and short-time

In the week ended February 14, 1972 the estimated number of operatives other than maintenance workers working overtime in establishments with 11 or more employees in manufacturing industries, excluding shipbuilding and ship repairing, was 1,245,600. This is about 22.9 per cent. of all operatives. Each operative worked an average of 8 hours overtime during the week.

In the same week the estimated number on short-time in these industries was 1,105,800 or about 20·4 per cent. of all operatives, each losing 15 hours on average.

Basic rates of wages and hours of work

At March 31, 1972, the indices of weekly rates of wages and of hourly rates of wages for all workers (January 31, 1956=100) were 239.8 and 266.5, compared with 239.3 and 265.6 at February 29.

Index of Retail Prices

At March 21 the official retail prices index was 160·3 (prices at January 16, 1962=100), compared with 159·8 at February 22 and 149·0 at March 16, 1971. The index for food was 166·0, compared with 165·1 at February 22.

Stoppages of Work

The number of stoppages of work due to industrial disputes in the United Kingdom beginning in March, which came to the notice of the Department of Employment was 122, involving approximately 41,500 workers. During the month, approximately 70,300 workers were involved in stoppages, including some which had continued from the previous month, and 482,000 working days were lost, including 347,000 lost through stoppages which had continued from the previous month.

INDUSTRIAL ANALYSIS OF EMPLOYEES IN EMPLOYMENT

The tables on pages 368-371 provide an industrial analysis of employees in employment in Great Britain for industries covered by the Index of Production each month from mid-June 1971 to mid-February 1972. All figures have been revised (a) to take account of information derived from the mid-1971 count of national insurance cards (b) on the basis of the new method mentioned in the Note "Employees in Employment" on page 364.

The estimates from June 1971 will be subject to further revisions when estimates derived from the annual censuses of employment at June 1971 and June 1972 become available.

The term employees in employment relates to all employees (employed and unemployed) other than those registered as wholly unemployed; it includes persons temporarily laid off but still on employers' payrolls and persons unable to work because of

^{*}Figures in these columns have been revised on the basis of the new method of obtaining monthly employment estimates (see News and Notes page 364 of this GAZETTE) but are subject to further revision when the results of the 1971 census of employment are available.

short-term sickness. Part-time workers are included and counted as full units.

The figures are based primarily on estimates of the total numbers of employees and their industrial distribution at mid-year which have been compiled on the basis of counts of national insurance cards. For manufacturing industries the returns rendered monthly by employers under the Statistics of Trade Act,

1947, have been used to provide a ratio of change since June 1971. For the remaining industries in the table, estimates of monthly changes have been provided by the nationalised industries and government departments concerned. (See note "Employees in Employment" on page 364 about the change in the method of computing the change in employment each month.)

Great Britain—Estimated numbers of employees in employment based on mid-1971 (continued)

OVERTIME AND SHORT-TIME IN MANUFACTURING INDUSTRIES

In the week ended February 19, 1972, it is estimated that the total number of operatives working overtime in establishments with 11 or more employees in manufacturing industries (excluding shipbuilding) was 1,245,600 or about 22.9 per cent. of all operatives, each working about 8 hours on average.

In the same week the estimated number on short-time in these establishments was 1,105,800 or 20.4 per cent, of all operatives each losing about 15 hours on average.

In February 1972 the volume of overtime and short-time working in all manufacturing industries was affected by the power crisis and on this occasion therefore, the estimates in the table below are given for each industry order. Separate estimates are not shown for individual industries (Minimum List Headings).

A time series is given in table 120 on page 404. The estimates are based on the revised method of obtaining employees in employment mentioned in the note "Employees in employment" on page

The figures for overtime relate to operatives other than maintenance workers. The figures for short-time relate to all operatives. Administrative, technical and clerical workers are excluded. The information about short-time relates to that arranged by the employer, and does not include that lost because of sickness, holidays or absenteeism. Operatives stood off by an employer for the whole week are assumed to have been on short-time for 40 hours each. Overtime figures relate to hours of overtime actually worked in excess of normal hours.

Overtime and short-time worked by operatives in manufacturing industries*—Great Britain: Week ended February 19, 1972

† Other than maintenance workers.

Note: Because the figures have been rounded independently, rounded totals may differ from the sum of the rounded components.

UNEMPLOYMENT ON MARCH 13, 1972

The number of persons other than school-leavers registered as wholly unemployed at local employment offices and youth employment service careers offices in Great Britain on March 13, 1972 was 917,701; 775,606 males and 142,095 females, and was 868 higher than on February 14, 1972. The seasonally adjusted figure was 886,300, or 3.9 per cent. of employees, compared with 3.8 per cent, in February and 2.9 per cent, in March 1971. The seasonally adjusted figure increased by 14,100 in the four weeks between the February and March counts, and by about 10,300 per month on average between December 1971 and March 1972.

Between February and March, the number of school-leavers registered as unemployed fell by 1,293 to 7,081, and the number of temporarily stopped workers registered fell by 602,515 to 46,826. The total registered unemployed fell by 602,940 to 971,608, representing 4.3 per cent. of employees, compared with 6.9 per cent. in February. The total registered included 50,820 married females and 3,771 casual workers.

Of the 921,011 wholly unemployed, excluding casual workers but including school-leavers, 97,450 had been registered for not more than 2 weeks, a further 75,878 from 2 to 4 weeks,

118,905 from 4 to 8 weeks and 628,778 for over 8 weeks. Those registered for not more than 4 weeks accounted for 18.8 per cent. of the total of 921,011, compared with 20.6 per cent. in February, and those registered for not more than 8 weeks accounted for 31.7 per cent., compared with 33.7 per cent. in February.

Included in women and girls.
† Numbers registered as unemployed expressed as a percentage of the estimated total number of employees (employed and unemployed) at mid-1971, except for London and South Eastern and Eastern and Southern Regions which are still based on mid-1970.

[‡] Casual workers are included in the totals, but are now excluded from the duration

figures.
§ See article on pages 285–287 of the April 1970 issue of this GAZETTE,

Notes: The percentage rates of unemployment represent the number of persons registered as unemployed expressed as a percentage of the estimated number of employees (employed and unemployed) at mid-1970 (mid-1971 for Northern Ireland total only) and Greater London.

* Detailed definitions of the development areas and of the intermediate areas and an explanation of the calculation of a percentage rate for the South East Wales Intermediate Area are given on pages 776-717 of the September 1970 issue of this GAZETTE. The Intermediate Areas Order (SI 1971 No. 329) specified the local employment office areas of Bridlington, Edinburgh, Filey, Okehampton, Oswestry, Portobello and

Tavistock as Intermediate Areas from March 10, 1971. The entry in the table for the South Western Intermediate Area comprises Okehampton, Tavistock and the Plymouth Area: the entry for the Scottish Intermediate Area comprises Edinburgh, Portobello and Leith. For the Scottish Intermediate Area the unemployment percentage rate shown is that for the Edinburgh travel-to-work area of which the Scottish Intermediate Area forms a substantial part.

† Figures relate to a group of local employment office areas details of which are given on page 779 of the September 1970 issue of this GAZETTE.

[•] The wholly unemployed include unemployed casual workers (3,547 males and 224 females in Great Britain and 3,812 males and 255 females in the United Kingdom). 164844

[†] Excluding members of H.M. Forces.

The number of vacancies remaining unfilled in Great Britain on March 8, 1972 was 157,658: 13,193 higher than on February 9,

The seasonally adjusted figure of unfilled vacancies for adults on March 8, 1972 was 126,300: 500 higher than that for February 9, 1972 and 10,000 higher than on December 1, 1971 (see table 119 on page 403).

The number of unfilled vacancies for young persons on March 8, 1972 was 39,138; 6,790 higher than on February 9,

Tables 1 and 2 give figures of unfilled vacancies for men, women, boys and girls analysed by industry and by region, respectively. The figures represent only the number of vacancies notified to local employment offices and youth employment service careers offices by employers and remaining unfilled on March 8, 1972. The figures do not purport to represent the total outstanding requirements of all employers. Nevertheless, comparison of the figures for various dates provides some indication of the change in the demand for labour.

STOPPAGES OF WORK

The official series of statistics of stoppages of work due to industrial disputes in the United Kingdom relates to disputes connected with terms and conditions of employment. Stoppages involving fewer than 10 workers, or lasting less than one day, are excluded, except where the aggregate of working days lost exceeded 100. Workers involved are those directly involved and indirectly involved (thrown out of work although not parties to the disputes) at the establishments where the disputes occurred. The number of working days lost is the aggregate of days lost by workers both directly and indirectly involved (as defined). It follows that the statistics do not reflect repercussions elsewhere, that is at establishments other than those at which the disputes occurred. For example, the statistics exclude persons laid off and working days lost at such establishments through shortage of material caused by the stoppages included in the statistics. More information about definitions and qualifications is given in a report on the statistics for the year 1970 on pages 429 to 439 of the May 1971 issue of this GAZETTE.

The number of stoppages beginning in March*, which came to the notice of the department, was 122. In addition, 52 stoppages which began before March were still in progress at the beginning of the month.

The approximate number of workers involved at the establishments where these stoppages occurred is estimated at 70,300, consisting of 41,500 involved in stoppages which began in March and 28,800 involved in stoppages which had continued from the previous month. The latter figure includes 1,500 workers involved for the first time in March in stoppages which began in earlier months. Of the 41,500 workers involved in stoppages which began in March, 35,900 were directly involved and 5,600 indirectly involved.

The aggregate of 482,000 working days lost in March includes 347,000 days lost through stoppages which had continued from the previous month.

PROMINENT STOPPAGES OF WORK DURING MARCH

Following a breakdown in national negotiations, an "area" pay claim, combined with a claim for a shorter working week, extra holiday pay and more positive moves towards equal pay for women, was presented to nearly 1,000 engineering firms in the North West, mainly in the Manchester area. While some firms reached individual settlements, a number of stoppages in the form of "sit-ins" were reported during the month, involving upwards of 11,000 employees.

About 3,500 workers at a Scottish truck and tractor plant, who had withdrawn their labour on January 10 in support of a claim for an increase in pay of £8 a week, began a phased return to work on March 13. This followed acceptance of an increased offer by management of £4 a week and improved guaranteed lay-off pay.

Work was resumed on March 10 at a Coventry tractor plant following a two-week stoppage by 80 toolroom workers together with 400 machine tool and cutter grinding employees who stopped work in sympathy. The dispute, over a factory wage bargaining system, caused about 4,000 other workers to be laid off.

A stoppage lasting over five months, which involved about 500 workers in the thermal insulation industry in North East England, ended on March 30. Work was resumed on negotiation of new agreements for extra bonus payments.

At a Clydeside shipyard a stoppage by 2,200 finishing trade and ancillary workers which had begun on January 27 ended with the APRIL 1972 DEPARTMENT OF EMPLOYMENT GAZETTE 379

acceptance, after initial refusal, of the company's offer of an increase of £2.80 a week plus consolidation of bonus lost in previous increases and restoration of certain allowances. This dispute had lead to the suspension of 1,000 boilermakers at the point they were to have resumed work after a stoppage in support of their own pay claim.

Stoppages of work in the first three months of 1972 and 1971

* The figures for the month under review are provisional and subject to revi those for earlier months have been revised where necessary in accordance with the most recent information. The figures have been rounded to the nearest 100 workers and 1,000 working days; the sums of the constituent items may not, therefore, agree

with the totals shown.

† Less than 50 workers or 500 working days.

BASIC WEEKLY RATES OF WAGES, NORMAL WEEKLY HOURS AND BASIC HOURLY RATES OF WAGES

The statistical tables in this article relate to changes in basic rates of wages or minimum entitlements and reductions in normal weekly hours, which are normally determined by national collective agreements or statutory wages regulation orders. For these purposes, therefore, any general increases are regarded as increases in basic or minimum rates. In general, no account is taken of changes determined by local negotiations at district, establishment or shop floor level. The figures do not, therefore, necessarily imply a corresponding change in "market" rates or actual earnings of those who are being paid at rates above the basic or minimum rates. The figures are provisional and relate to manual workers only.

The changes in monetary amounts represent the increase in basic full-time weekly rates of wages or minimum entitlements only, based on the normal working week, that is excluding shorttime or overtime.

Indices

At March 31, 1972 the indices of changes in weekly rates of wages, of normal weekly hours and of hourly rates of wages for all workers, compared with a month and a year earlier, were:

January 31, 1956 = 100

Date	All indus	tries and		Manufacturing industries only					
000,8 00 000,1 00 000,01 00	Basic weekly rates	Normal weekly hours	Basic hourly rates	Basic weekly rates	Normal weekly hours	Basic hourly rates

1972 February	239.3	90 · 1	265 · 6	233 · 8	90.4	258 · 7			
1972 March	239 · 8	90.0	266 · 5	234-5	90.4	259-5			

1. The full index numbers and explanatory notes are given in table 130.
2. The February figures have been revised to include changes having retrospective

Principal changes reported in March

Brief details of the principal changes, with operative dates, are set out below:

Dressmaking and women's light clothing—England and Wales: Increases of 2.25p to 3.5p an hour, according to occupation, for men 21 and over, of 3p for women, with proportional amounts for late entrants and young workers (March 9). Footwear manufacture—UK: Increase in minimum rates of £0.75 a week for men, of £1 for women together with an increase of £0.375 a week in minimum day wage rates for adult workers, with proportional amounts for young workers in each case (first pay day in March). Pottery manufacture—GB: Hourly rates increased by 5p for men and 4p for women. Adult rate for women payable at 19 and over (previously 20) (March 27). Paper and board making, etc—UK: Increases of varying amounts, according to classification (February 4).

Company-owned buses—GB: Increases of £1.25 a week for drivers, of £1.20 for conductors, semi-skilled and unskilled men in garages and running sheds and of £1.40 for skilled maintenance workers (beginning of first full pay period following March.).

March 3).

Retail food trades (Wages Council)—England and Wales and Scotland:

Retail food trades (Wages Council)—England and Wales and Scotland:

Normal weekly hours reduced from 42 to 41 (44 to 43 or 43 to 42 for certain workers)

Adult rates now payable for grade I clerks at 22 and over (previously 23) and for other

workers at 21 and over (previously 22) (March 20).

workers at 21 and over (previously 22) (March 20).

Retail drapery, outfitting and footwear trades—GB: Normal weekly hours reduced from 42 to 41. Adult rates now payable for grade I clerks at 22 and over (previously 23) and for certain other classes of workers at 21 and over (previously 22) (March 6).

Industries affected by cost-of-living sliding-scale adjustments include carpet manufacture, footwear manufacture and cinematograph film production.

Full details of changes reported during the month are given in the separate publication "Changes in Rates of Wages and Hours of Work".

Estimates of the changes reported in March indicate that the basic weekly rates of wages or minimum entitlements of some 610,000 workers were increased by a total of £760,000 but, as stated earlier, this does not necessarily imply a corresponding change in "market" rates or actual earnings. The total estimates, referred to above, include figures relating to those changes which were reported in March with operative effect from earlier months (130,000 workers, £210,000 in weekly rates of wages). Of the total increase of £760,000 about £360,000 resulted from

arrangements made by joint industrial councils or similar bodies established by voluntary agreement, £210,000 from direct negotiations between employers' association and trade unions, £140,000 from statutory wages regulation orders and the remainder from cost of living sliding scale adjustments.

Reports received in March indicated that about 470,000 workers had their normal weekly hours reduced by an average of 1 hour.

Analysis of aggregate changes

The following tables show (a) the cumulative effect of the changes, by industry group and in total, during the period January to March 1972, with the total figures for the corresponding period in the previous year entered below, and (b) the month by month effect of the changes over the most recent period of thirteen months. In the columns showing the numbers of workers affected, those concerned in two or more changes in any period are counted only once.

RETAIL PRICES, MARCH 21, 1972

At March 21, 1972 the general* retail prices index was 160.3 (prices at January 16, 1962 = 100), compared with 159.8 at February 22, 1972, and with 149.0 at March 16, 1971.

The rise in the index during the month was due to increases in the prices of tomatoes and many other goods and services which were partly offset by a reduction in the average price of sugar.

The index measures the change from month to month in the average level of prices of the commodities and services purchased by nearly nine-tenths of households in the United Kingdom, including practically all wage earners and most small and medium salary earners.

The index for items of food whose prices show significant seasonal variations, namely, home-killed lamb, fresh and smoked fish, eggs, fresh vegetables and fresh fruit, was 167.0, and that for all other items of food was 166.2. The index for all items except items of food the prices of which show significant seasonal variations was 160.2.

The principal changes in the month were:

Food: Increases in the average prices of tomatoes, beef, lamb, brussels sprouts and apples-were partly offset by a reduction in the average price of sugar. The index for the food group as a whole rose by one-half of one per cent. to 166-0, compared with 165-1 in February. The index for foods whose prices show significant seasonal variations rose by nearly $4\frac{1}{2}$ per cent. to 167-0, compared with 160-0 in

Alcoholic drink: A rise in the average level of prices of beer caused the index for the alcoholic drink group to rise by one-half of one per cent. to $155 \cdot 0$, compared with $154 \cdot 3$ in February.

Fuel and light: Mainly as a result of higher charges for gas in nearly all areas, and for electricity in some areas, the index for the fuel and light group rose by nearly one per cent. 170-5, compared with 169-0 in February. Clothing and footwear: There were rises in the average levels of prices of most

articles of clothing and footwear, and the group index rose by nearly one-half of one per cent. to 138.7, compared with 138.1 in February. Transport and vehicles: The principal changes in this group were a fall in the average level of prices of second-hand cars and rises in bus fares in some areas. The group index was unchanged at $152 \cdot 5$.

Services: Higher postal charges were mainly responsible for the rise of one-half of one per cent. in the index for the services group as a whole. The group index was $175 \cdot 9$, compared with $175 \cdot 1$ in February.

Meals bought and consumed outside the home: There was a rise of nearly one-half of one per cent. in the average level of prices in this group, and the index was 174·1, compared with 173·4 in February.

Detailed figures for various groups and sub-groups are:

Gra	up ana suo-group	Index figur

* The description "general" index of retail prices is used to differentiate from the

* The description "general" index of retail prices is used to differentiate from the two indices for pensioner households. These "pensioner" indices were published for the first time on pages 542 to 547 of the June 1969 issue of this GAZETTE; later figures are given in special articles in the February, May, August and November issues.
† The Cost of Living Advisory Committee recommended in 1962 that until a satisfactory index series based on actual prices became available half the expenditure on meals out should continue to be allocated to the food group and the other half spread proportionately over all groups, including the food group. The index for meals out for January 16, 1968 implicit in this recommendation was 121.4. Since January 1968 an index series based on actual prices has been available and indices in this series have been linked with the implicit index for meals out for January 16, 1968, to obtain indices for meals out with January 16, 1962 taken as 100.

Statistical Series

Tables 101-134 in this section of the GAZETTE give the principal statistics compiled regularly by the department in the form of time series, including the latest available figures together with comparable figures for preceding dates and years.

They are arranged in subject groups, covering the working population, employment, unemployment, unfilled vacancies, hours worked, earnings, wage rates and hours of work, retail prices and stoppages of work resulting from industrial disputes. Some of the main series are shown as charts. Brief definitions of the terms used are at the end of this section.

The national statistics relate either to Great Britain or the United Kingdom, and regional statistics to the Standard Regions for Statistical Purposes [see this GAZETTE, January 1966, page 20] which conform generally to the Economic Planning Regions.

Working population. The changing size and composition of the working population of Great Britain at quarterly dates is in table 101, and more detailed analyses of the employment and unemployment figures are in subsequent tables.

Employment. As it is not practicable to estimate short-term changes in the numbers of self-employed persons, the group of employment tables relate only to employees. Monthly estimates are given for broad groups of industries covered by the Index of Industrial Production, and annual mid-year estimates for other groups (table 103). The quarterly totals in employment in all industries and services are analysed by region in table 102.

Unemployment. The group of unemployment tables (104-116) show the numbers of persons registered at local employment offices and youth employment service careers offices in Great Britain, and in each region, at the monthly counts. For Great Britain separate figures are given for males and females. Persons are included in the count of registered unemployed if they are seeking employment with an employer, are capable of and available for work, are registered for employment at a local employment office or youth employment service careers office on the day of the monthly count, and are not in employment on that day. The count includes both claimants to unemployment benefit and persons who are not claiming benefit, but it excludes those non-claimants who are registered only for part-time work. Also excluded are those persons who are severely disabled, and who are considered unlikely to obtain work other than under special conditions.

The total registered is expressed as a percentage of the total numbers of employees to indicate the incidence rate of unemployment. It is also sub-divided into those temporarily stopped from work and those wholly unemployed. The latter group includes young persons seeking their first employment who are described as school-leavers and shown separately. The tables also give separate figures for wholly unemployed excluding school-leavers, which, in addition, are adjusted for seasonal variations.

An industrial analysis of the national statistics of wholly unemployed excluding school-leavers appears in table 117, together with figures adjusted for seasonal variations.

The wholly unemployed are analysed in table 118 according to the duration in weeks of their current spell of registration.

Unfilled vacancies. The vacancy statistics in table 119 relate to the vacancies notified by employers to local employment offices and youth employment service careers offices, and which, at the date of count, remain unfilled. They do not measure the total volume of unsatisfied immediate manpower requirements of

Hours worked. This group of tables provides additional information about the level of industrial activity. Table 120 gives estimates of overtime and short-time working by operatives in manufacturing industries; table 121 the total hours worked and the average hours worked per operative per week in broad industry groups in index form; table 122 gives average weekly hours worked by men and by women wage earners in selected industries in the United Kingdom covered by regular enquiries.

Earnings and wage rates. Table 122 also gives the average weekly and hourly earnings of manual workers in the United Kingdom in industries covered by the regular enquiries; average weekly earnings of administrative, technical and clerical employees are given in table 123; and those earnings in index form in table 124. The average earnings of clerical and analogous employees, and all administrative, technical and clerical employees in certain industries and services, are in table 125; a comparative table of annual percentage changes of hourly earnings and hourly wage rates in table 126, and average earnings in index form by industry in table 127, and by occupation in certain manufacturing industries in table 128. The next table, 129, shows, in index form, movements in weekly and hourly wage rates and earnings and normal and actual weekly hours of work, and in salaried earnings. The final tables in this group, 130 and 131 show indices of weekly and hourly rates of wages, and normal weekly hours for all industries and services, for manufacturing industries and by industry group.

Retail prices. Table 132 gives the all-items and broad item group figures for the official General Index of Retail Prices. Quarterly all-items (excluding housing) indices for pensioner households are given in special articles in the February, May August and November issues of this GAZETTE.

Industrial stoppages. Details of the numbers of stoppages of work due to industrial disputes, the number of workers involved and days lost are in table 133.

Output per head and labour costs. Table 134 provides annual and quarterly indices of output, employment and output per person employed for the whole economy, the Index of Production and manufacturing sectors and for selected industries where output and employment can be reasonably matched. Annual and quarterly indices of total domestic incomes per unit of output are given for the whole economy, with separate indices for the largest component-wages and salaries. Annual indices of labour costs per unit of output (including all items for which regular data is available) are shown for the whole economy and for selected industries.

A full description is given in the GAZETTE, October 1968, pages 801-803.

Conventions. The following standard symbols are used:

not available nil or negligible (less than half the final digit shown)

not elsewhere specified n.e.s.

U.K. Standard Industrial Classification (1958 or 1968 edition as indicated)

A line across a column between two consecutive figures indicates that the figures above and below the line have been compiled on a different basis, and are not wholly comparable, or that they relate to different groups for which totals are given

Where figures have been rounded to the final digit, there may be an apparent slight discrepancy between the sum of the constituent items and the total as shown.

Although figures may be given in unrounded form to facilitate the calculation of percentage changes, rates of change, etc by users, this does not imply that the figures can be estimated to this degree of precision, and it must be recognised that they may be the subject of sampling and other errors.

Note: The Order Groups of the Standard Industrial Classification are presented in the format of the SIC (1968). However, estimates for June 1969 (a) and earlier months are classified according to the SIC (1958) and are not fully comparable therefore with the estimates for June 1969 (b) and later months which are classified on the basis of the SIC (1968).

TABLE 103 (continued)

^{*} The figures given in this column are estimates of the total number of employees in employment given in table 101 obtained by the method described in the article on pages 207-214 in the May 1966 issue of this GAZETTE. For June 1960 to June 1964 (a) they differ from the sum of the estimates given for industry groups which were compiled by different methods.

† The industries included in the Index of Production are Orders II-XVIII of the SIC (1958) and Orders II-XXI of the SIC (1968).

[§] Estimates for June 1964(b) and later months are on the revised basis of calculation and are not strictly comparable with the estimates for June 1964 (a) and earlier dates. (See pages 110 to 112 of the March 1966 issue of this GAZETTE.)

| Figures after June 1971 for industry groups have been revised on the basis of the new method of obtaining monthly employment estimates (see News and Notes on page 364 of this GAZETTE) but are subject to further revision when the results of the 1971 Census of Employment are available.

¶ Excluding members of HM Forces.

^{**} Between June 1966 and June 1967 the industrial classification of many establishments were corrected. The estimates from July 1966 onwards take account of these changes: the estimates up to and including May 1966 do not take account of them. Estimates for June 1966 are shown on both bases, that is (a) excluding and (b) including the effects of reclassifications.

§§ Returns from employers are used for the compilation of this table. Owing to the interruption of postal services, the January 1971 figures have been calculated from a smaller number of returns than usual and no estimates are available for February 1971.

* See articles on page 174 of the February 1972 issue and pages 285-287 of the April 1970 issue of this GAZETTE.

The base used in calculating these percentages is the appropriate mid-year estimate of total employees (employed and unemployed). The latest available estimate

(22,715,000) is for mid-1971, and this has been used to calculate the percentage for each month since January 1971 shown above. When the estimate for mid-1972 becomes available the percentage rates for months in 1972 may be recalculated.

Excluding Dorset other than Poole.

The base used in calculating these percentages is the appropriate mid-year estimate

of total employees (employed and unemployed). The latest available estimate (7,752,000) is for mid-1971, and this has been used to calculate the percentage for each month since January 1971 shown above. When the estimate for mid-1972 becomes available the percentage rates for months in 1972 may be recalculated.

* See articles on page 174 of the February 1972 issue and pages 285-287 of the April 1970 issue of this GAZETTE.

The base used in calculating these percentages is the appropriate mid-year estimate of total employees (employed and unemployed). The latest available estimate

(2,279,000) is for mid-1971, and this has been used to calculate the percentage for each month since January 1971 shown above. When the estimate for mid-1972 becomes available the percentage rates for months in 1972 may be recalculated.

(2,881,000) is for mid-1971, and this has been used to calculate the percentage for each month since January 1971 shown above. When the estimate for mid-1972 becomes available the percentage rates for months in 1972 may be recalculated.

^{*} See articles on page 174 of the February 1972 issue and pages 285-287 of the April 1970 issue of this GAZETTE.

The base used in calculating these percentages is the appropriate mid-year estimate of total employees (employed and unemployed). The latest available estimate

^{*} See articles on page 174 of the February 1972 issue and pages 285-287 of the April 1970 issue of this GAZETTE.

The base used in calculating these percentages is the appropriate mid-year estimate of total employees (employed and unemployed). The latest available estimate

is for mid-1971, and this has been used to calculate the percentage for each month since January 1971 shown above. When the estimate for mid-1972 becomes available the percentage rates for months in 1972 may be recalculated.

^{*} See articles on page 174 of the February 1972 issue and pages 285-287 of the April 1970 issue of this GAZETTE.

The base used in calculating these percentages is the appropriate mid-year estimate of total employees (employed and unemployed). The latest available estimate (970,000)

^(2,133,000) is for mid-1971, and this has been used to calculate the percentage for each month since January 1971 shown above. When the estimate for mid-1972 becomes available the percentage rates for months in 1972 may be recalculated.

^{*} Excluding MLH 884-888 (Catering, hotels etc.) in Order XXVI. Including persons aged 18 years and over not classified by industry.

† The figures from June 1969 onwards have been compiled using the 1968 edition of the Standard Industrial Classification. The figures between 1959 and May 1969 were compiled using the 1958 edition of the SIC. This change slightly affected the numbers

unemployed in some industries so that figures since June 1969 may not be strictly comparable with those for earlier periods. A similar discontinuity took place in 1959 before which time the figures were compiled using the 1948 edition of the SIC.

‡ See articles on page 174 of the February 1972 issue and pages 285-287 of the April 1970 issue of this GAZETTE.

Note: Annual figures relate to a particular week in June of each year.

* Figures relate to establishments with more than ten employees in all manufacturing industries except shipbuilding and ship repairing. They are adjusted to allow for establishments not rendering returns. The estimates from June 1966 onwards have been revised to take account of certain changes in industrial classification (see pages 206-207 of the March 1968 issue of this GAZETTE). The estimates for June 1966 are given on both bases, namely (a) excluding and (b) including the effects of reclassification. Estimates prior to June 1969 are based on the 1958 edition of the Standard Industrial Classification and since June 1969 on the 1968 edition. The figures for June 1969 are given on both bases namely (a) the 1958 edition and (b) the 1968 edition.

† Operatives stood off for the whole week are assumed to have been on short-time to the extent of 42 hours each in the figures up to and including 1969 June (a) and 40 hours each in the figures for 1969 June (b) and later months.

‡ Figures after June 1971 have been revised on the basis of the new method of obtaining monthly employment estimates (see News and Notes on page 364 of this GAZETTE) but are subject to further revision when the results of the 1971 Census of Employment are available.

§ See footnote §§ on table 103.

|| This week included Easter Monday.
¶ See page 372 for detailed analysis.

***In February 1972, the volume of overtime and short-time working was affected by the power crisis.

HOURS OF WORK manufacturing industries: hours worked by operatives: Great Britain

^{*} The index of total weekly hours worked from July 1971 has been revised on the basis of the new method of obtaining monthly employment estimates (see News and Notes page 364 of this GAZETTE) and is subject to further revision when the results of the 1971 Census of Employment are available. Both the index of total weekly hours worked and the index of average hours worked from November 1971 may be revised when the results of the October 1972 enquiry into the hours of work of manual workers are available.

† See footnote §\$ to table 103.

† This week included Easter Monday.

§ See footnote ** to table 120.

Notes:

A full account of the method of calculation was published on pages 305 to 307 of the August 1962 issue, and on page 404 of the October 1963 issue, respectively, of this GAZETTE.

Figures for July and August before 1962 published in earlier issues of this GAZETTE are not comparable with the figures for corresponding months in later years.

^{*} Earnings of monthly-paid employees have been converted to a weekly basis according to the formula—monthly earnings multiplied by 12 and divided by 52.
† Nationalised industries namely coal mining, gas, electricity, British Rail, British Transport Docks, British Waterways and air transport; the figures from 1963 include also London Transport and from 1966 British Road Services. The type of salaried

employees and the distribution of salary levels differ markedly between the various nationalised industries; consequently the average is not representative of any one of

them.

‡ These figures cover all the industries and services in the public sector and banking except education, British Transport Docks, British Waterways and London Transport.

Note:
Firms with fewer than 25 employees (administrative, technical, clerical and operatives combined) were outside the scope of the enquiry. Only a 50 per cent. sample of firms with 25-99 employees were asked to complete the enquiry forms and for this reason in compiling these tables the numbers of administrative, technical and clerical employees

in this size range and their aggregate earnings have been doubled before being added to the corresponding totals for the larger firms in each industry for the purpose of calculating average earnings.

* Including "Leather, leather goods and fur."

† All industries and services as in footnote * to table 124.

The table covers full-time workers in the industries included in the department's regular enquiries into the earnings and hours of manual workers (Table 122).

* The figures in column (3) are calculated by:

1. Assuming that the amount of overtime is equal to the difference between the actual hours worked and the average of normal weekly hours;

2. Multiplying this difference by 1½ (the assumed rate of overtime pay);

Adding the resulting figure to the average of normal weekly hours to produce a "standard hours equivalent" of actual hours worked; and
 Dividing the average weekly earnings by the "standard hours equivalent" which gives a reasonably satisfactory estimate of average hourly earnings exclusive of overtime.

The figures in this column are based on the hourly wage rates index.

Note (1): This series is explained in an article on page 214 of the March 1967 issue of this GAZETTE. The information collected is the gross remuneration including overtime payments, bonuses, commission, etc. Monthly earnings have been converted into weekly earnings by using the formula:—monthly earnings multiplied by 12 and divided by 52. In arriving at the indices of average earnings the total remuneration is divided by the total number of employees without distinguishing between males and females, adults and juveniles, manual and non-manual employees or between full-time and part-time employees.

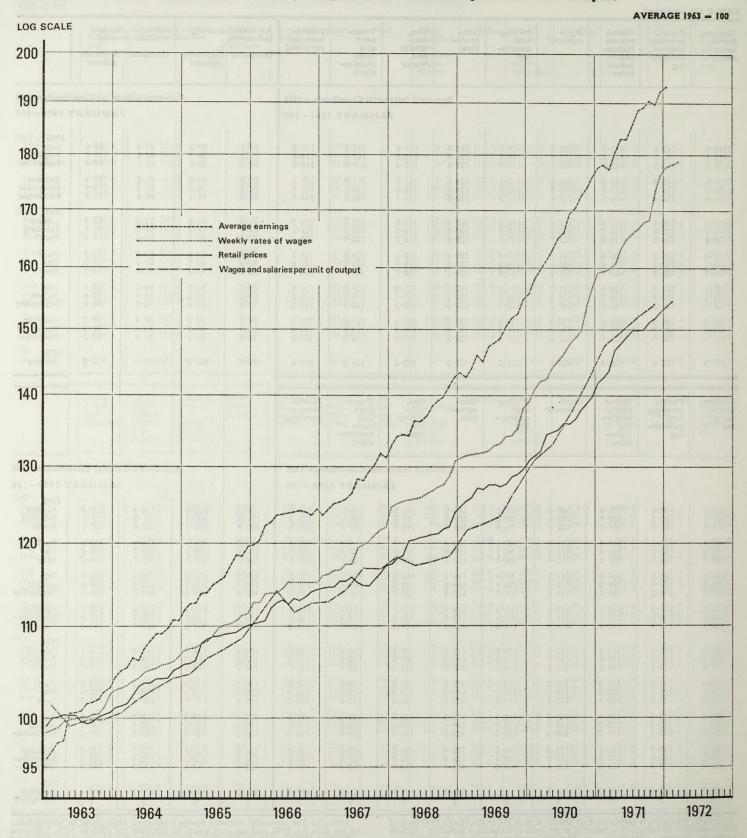

Note (2): The seasonally adjusted figures have been recalculated to take account of the data for 1970, and are now based on the data for 1963 to 1970. Complete series from 1963 onwards are given in an article on pages 613-615 of the July 1971 issue of this GAZETTE for (a) the all industries index, and (b) the all manufacturing industries index, both before and after seasonal adjustment, based on January 1970 = 100.

England and Wales only.
 Except sea transport and postal services.
 Consisting of laundries and dry cleaning, motor repairers and garages and repair of boots and shoes.
 Provisional.

^{||} Because of the coal mining dispute a reliable index for "Mining and quarrying" cannot be calculated. The December 1971 figures for coal mining have been used in the compilation of the index for "all industries and services covered".

| As industrial activity was severely disrupted by restricted electricity supplies, the monthly survey was not carried out in February and so figures cannot be calculated for this month.

Earnings, wage rates, retail prices, wages and salaries per unit of output

These indices have been converted to a common base date (average 1955 = 100) These indices have been converted to a common base date (average 1933 = 100) and therefore should not be compared with indices on different bases.

* The indices of rates of wages and of normal weekly hours relate to manual workers in all industries and services, but those for average weekly earnings and average hours worked cover only those in industries included in the regular enquiry into earnings and hours of manual workers (table 122).

[†] See footnotes to table 130. ‡ From and including October 1967 includes (a) dock workers previously on daily or half-daily engagements and (b) postmen. April and October until 1969, then October

S Compiled annually (October). For coverage, see footnote * to table 124.

Actual average figure in hours for the index base year (1955) is given in brackets.

^{*} Actual average of normal weekly hours at the index base date (January 31, 1956) is shown in brackets at head of column.

† In General, males under 21 years of age and females under 18 years of age.

The General, males under 21 years of age and remained manely basic rates of wages, standard rates, minimum guarantees, or minimum earnings levels as the case may be) and normal weekly hours of work, which are generally the outcome of centrally-determined arrangements, usually national collective agreements or statutory wages regulation orders. Where an agreement or order provides for both a basic rate and a minimum earnings guarantee for a normal week, the higher of the two amounts is taken as the minimum entitlement. Details of the representative industries and services for which changes are taken into account

and the method of calculation are given in the issues of this GAZETTE for February 1957, September 1957, April 1958, February 1959 and January 1960.

2. In general, the statistics do not take account of changes determined by local negotiations at establishment or shop floor level. They do not reflect changes in earnings or in actual hours worked due to such factors as overtime, short-time, variations in output, etc.

3. The figures relate to the end of the month.

4. Publication of the index figures to one decimal place must not be taken to mean that the figures are thought to be significant to more than the nearest whole number.

number.

5. Where necessary, figures published in previous issues of this GAZETTE have been revised to include changes having retrospective effect or reported belatedly.

^{*} See footnote on previous page.

^{*} Actual average of normal weekly hours at the index base date (31st January 1956) is shown in brackets at head of column.
† Comprises Orders IV and V of the 1968 Standard Industrial Classification.
‡ Comprises Orders VI to XII of the 1968 Standard Industrial Classification.

 ⁺ Comprises Class - Comparison of the Comparison of t

months immediately prior to the base date (31st January 1956). In addition, there is a considerable variation in the provisions of collective agreements and statutory wages regulation orders and there is therefore no common pattern for the calculation of the indices for the different industry groups. The industry groups are analysed according to the Standard Industrial Classification 1968.

Where necessary, figures published in previous issues of this GAZETTE have been revised to include changes having retrospective effect or reported belatedly.

‡ The Cost of Living Advisory Committee recommended in 1962 that until a satisfactory index series based on actual prices became available half the expenditure on meals out should continue to be allocated to the food group and the other half spread proportionately over all groups, including the food group. The index for meals out for

January 16, 1968 implicit in this recommendation was 121.4. Since January 1968 an index series based on actual prices has been available and indices in this series have been linked with the implicit index for meals out for January 16, 1968 to obtain, indices for meals out with January 16, 1962 taken as 100.

Index of retail prices

January 1962 = 100

^{*} The statistics relate to stoppages of work due to disputes connected with terms and conditions of employment. They exclude stoppages involving fewer than ten workers and those which lasted less than one day, except any in which the aggregate number of working days lost exceeded 100. The figures for 1971 are provisional and subject to revision.

[†] Workers directly and indirectly involved at the establishments where the stoppages occurred. Workers laid off at establishments other than those at which the stoppages occurred are excluded. Workers involved in stoppages beginning in one month and continuing into later months are counted, in col. (3), in the month in which they first participated (including workers involved for the first time in stoppages which began in an earlier month), and in col. (4), in each month in which they were involved.

[‡] Loss of time, for example through shortages of material, which may be caused at other establishments is excluded. From 1960 the analysis by industry is based on the Revised Standard Industrial Classification 1958 and from 1970 on the Revised Standard Industrial Classification 1968.

§ Figures exclude workers becoming involved after the end of the year in which the stoppage began.

|| Precise comparison between the number of stoppages in 1968 and the number in earlier years cannot be made due to the changed method of reporting and counting stoppages in the port transport industry following decasualisation. It is estimated that with the previous methods the number of stoppages in the port and inland water transport industry (and so in the total for all industries and services) in 1968 would have been about 30 fewer.

† Figures shown in brackets are provisional.

Note: This series was introduced in an article on pages 801-806 of the October 1968 issue of this GAZETTE and revised in September 1969 using 1963 as the base year.

DEFINITIONS

The terms used in these tables are defined more fully elsewhere in articles in this GAZETTE relating to particular statistical series. The following are short general definitions.

All employed and registered unemployed persons.

HM FORCES

Serving UK members of HM Armed Forces and Women's Services including those on release leave.

CIVILIAN LABOUR FORCE

Working population less HM Forces.

TOTAL IN CIVIL EMPLOYMENT

Civilian labour force less registered wholly unemployed.

EMPLOYEES IN EMPLOYMENT

Total in civil employment less self-employed.

TOTAL EMPLOYEES

Employees in employment plus registered wholly unemployed. (The above terms are explained more fully on pages 207-214 of the May 1966 issue of this GAZETTE.)

REGISTERED UNEMPLOYED

Persons registered for employment at a local employment office or youth employment office on the day of the monthly count who are not in employment on that day, being either wholly unemployed or temporarily stopped (certain severely disabled persons are excluded).

WHOLLY UNEMPLOYED

Registered unemployed persons without jobs on the day of the count, and available for work on that day.

UNEMPLOYED SCHOOL-LEAVERS

Registered wholly unemployed persons under 18 years of age who have not entered employment since terminating fulltime education.

TEMPORARILY STOPPED

Registered unemployed persons, who, on the day of the count, are suspended from work by their employers on the understanding that they will shortly resume work and are still regarded as having a job.

UNEMPLOYED PERCENTAGE RATE

Total number of registered unemployed expressed as a percentage of the estimated total number of employees at mid-year.

A job notified by an employer to a local employment office or youth employment office which is unfilled at the date of the monthly count.

SEASONALLY ADJUSTED

Adjusted for normal seasonal variations.

Males aged 18 years and over, except where otherwise stated.

WOMEN

Females aged 18 years and over.

Men and women.

Males under 18 years of age, except where otherwise stated.

Females under 18 years of age.

YOUNG PERSONS

Boys and girls.

Males aged 18-20 years (used where men means males aged 21 and over).

Employees, other than administrative, technical and clerical employees in manufacturing industries.

Employees, other than administrative and clerical employees, in industries covered by earnings enquiries.

Persons normally working for not more than 30 hours a week except where otherwise stated.

NORMAL WEEKLY HOURS

Recognised weekly hours fixed in collective agreements etc.

WEEKLY HOURS WORKED

Actual hours worked during the week.

Work outside normal hours.

SHORT-TIME WORKING

Arrangements made by an employer for working less than normal hours.

STOPPAGES OF WORK—INDUSTRIAL DISPUTES

Stoppage of work due to disputes connected with terms of employment or conditions of labour, excluding those involving fewer than 10 workers and those which last for less than one day, except any in which the aggregate number of man-days lost exceeded 100.

The Industrial

On 28 February 1972, further provisions of the Industrial Relations Act came into force. Three free booklets about these and other provisions are now available.

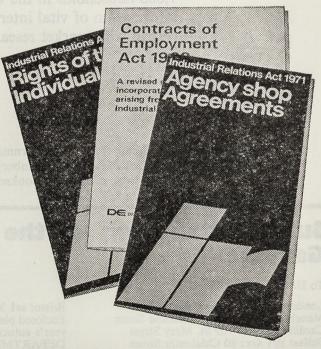

Rights of the Individual describes the protection the new law gives to employees who have been unfairly dismissed, and their new rights in the areas of Trade Union membership and

Agency shop Agreements defines the conditions under which a registered Trade Union (or group of Unions) can secure an agency shop agreement and explains how these agreements

Contracts of Employment Act: Revised Guide explains how the new legislation changes this Act, and affects the conditions under which employees work-including the period of notice to which they are entitled.

These three booklets are invaluable to anyone directly involved in industrial relations. They are all available from Employment Exchanges, which also carry stocks of three earlier free booklets on the Industrial Relations Act: A Guide to the Act; The Act outlined: and a booklet on Registration.

3 free booklets are now available.
