

## 155 Index of products

This index shows the industry report in which details of the output of a particular commodity are given. For each item in the index the figures before the solidus refer to the part number, whilst those following it refer to the page numbers within each part. The page indicated is that on which appears the total sales of the commodity in 1968 by the larger firms engaged in its production; in a few cases the estimated figure (based on a sample) is also given.

The omission of a commodity from the index does not necessarily mean that there was no production in the United Kingdom during 1968, but merely that sales are not separately recorded in the Census reports.

Some items included in the index do not appear separately in the reports, but only as part of a wider group of commodities. Such cases occur where objection was made to the publication of separate figures on account of the disclosure of information relating to individual undertakings.
