Analysis of manufacturing industries by employment size of establishment  
within

- (i) All manufacturing industries
- (ii) Each manufacturing Standard Industrial Classification Order  
(ORDERS III - XIX)
- (iii) Each manufacturing census industry (Parts 7 - 150 inclusive of  
the Report on the Census of Production, 1968).

## INTRODUCTION

This analysis by employment size of establishment within manufacturing industry is supplementary to the tables published in the Report on the Census of Production, 1968. The separate industry reports each contain an establishment size analysis but it was considered that a useful purpose could be served by bringing them all together and presenting them along with their relevant Standard Industrial Classification Order totals and a grand total of all manufacturing industry.

The Census was based on the establishment. In accordance with the provisions of the Standard Industrial Classification (Revised 1968) under which the Census was conducted an establishment was defined as being the smallest unit which can provide information normally required for an economic census, for example, employment, expenses, turnover, capital formation. For previous censuses the establishment comprised in most cases the premises under the same ownership or management at a particular address. The register of establishments used for issue of the 1968 census questionnaires tended to reflect the old definition and a number of respondents subsequently claimed that they could not make separate returns for each address under their control. In a few instances the addresses were grouped to form a single establishment but in other instances the individual addresses retained their identity as separate establishments and a combined return was accepted.

Establishments were asked to exclude from all sections of their return particulars relating to any department not engaged in production for which separate records were kept but if separate records were not maintained then the returns could include merchanting and factoring and other ancillary activities such as bottling, packing and the manufacture of containers for packing an establishment's own products, whether or not these activities were carried on at the same address as the works, building and engineering maintenance, selling and transport and the operation of canteens.

Where a combined return was accepted the number of operatives employed at each address was required to be shown separately. Estimates were then prepared on that basis allocating to the appropriate size group a proportion of the total employment, gross and net output and wages and salaries for each establishment.

For most industries in the census, establishments employing fewer than 25 persons were not required to make detailed returns but were asked merely to state the number of persons employed and to give a description of the activities of the establishment. In these industries estimates have been made for the remaining detail in the tables based on the employment returned and although not shown against the under 25 size groups the results are included in the total for the industry. A similar procedure was used to estimate for unsatisfactory returns.

A slightly different method of presentation was used in a number of industries (known as 'short form' industries) where small establishments formed a substantial proportion of the total employment. Estimates were made for unsatisfactory small establishments and have been shown added to the detail derived from acceptable small returns in the combined size cells 1 - 5, 6 - 10 and 11 - 24. In these industries estimates for unsatisfactory returns employing over 25 persons have also been shown separately.

The analysis for all manufacturing industries and for the separate Standard Industrial Classification Orders include estimates for small establishments and for unsatisfactory returns only in their respective totals.

## INTRODUCTION

This analysis by employment size of establishments within manufacturing industry is supplementary to the tables published in the Report on the Census of Production, 1968. The separate industry reports each contain an establishment size analysis but it was considered that a useful purpose could be served by bringing them all together and presenting them along with their relevant Standard Industrial Classification Order totals and a grand total of all manufacturing industry.

The Census was based on the establishment. In accordance with the provisions of the Standard Industrial Classification (Revised 1968) under which the Census was conducted an establishment was defined as being the smallest unit which can provide information normally required for an economic census, for example, employment, expenses, turnover, capital formation. For previous censuses the establishment comprised in most cases the premises under the same ownership or management at a particular address. The register of establishments used for issue of the 1968 census questionnaires tended to reflect the old definition and a number of respondents subsequently claimed that they could not make separate returns for each address under their control. In a few instances the addresses were grouped to form a single establishment but in other instances the individual addresses retained their identity as separate establishments and a combined return was accepted.

Establishments were asked to exclude from all sections of their return particulars relating to any department not engaged in production for which separate records were kept but if separate records were not maintained then the return could include warehousing and factoring and other ancillary activities such as bottling, packing and the manufacture of containers for packing an establishment's own products, whether or not these activities were carried on at the same address as the work, building and engineering maintenance, selling and transport and the operation of canteens.

Where a combined return was accepted the number of operatives employed at each address was required to be shown separately. Estimates were then prepared on that basis allocating to the appropriate size group a proportion of the total employment, gross and net output and value added for each establishment.

For most industries in the census, establishments employing fewer than 25 persons were not required to make detailed returns but were asked merely to state the number of persons employed and to give a description of the activities of the establishment. In these industries estimates have been made for the remaining detail in the tables based on the employment returned and although not shown against the under 25 size groups the results are included in the total for the industry. A similar procedure was used to estimate for unsatisfactory returns.

A slightly different method of presentation was used in a number of industries known as 'short form' industries where small establishments formed a substantial proportion of the total employment. Estimates were made for unsatisfactory small establishments and have been shown added to the detail derived from acceptable small returns in the combined size cells 1-5, 6-10 and 11-24. In these industries estimates for unsatisfactory returns employing over 25 persons have also been shown separately.

The analysis for all manufacturing industries and for the separate Standard Industrial Classification Orders include estimates for small establishments and for unsatisfactory returns only in their respective totals.

- (a) Including estimated figures for small firms who were not required to complete detailed returns and for unsatisfactory returns.
- (b) The numbers shown for size groups 1 - 5, 6 - 10 and 11 - 24 relate to the number of small single establishments received and for small establishments of larger firms included in combined returns. For selected short form industries (see introduction) unsatisfactory small establishments are also included.
- (c) Including persons engaged in merchanting or factoring and canteen workers (where particulars in respect of these activities could not be excluded from the returns) and working proprietors, but excluding outworkers. (except in industry 440(2)).
- (d) Where combined returns were made covering more than one establishment, employment, gross and net output, wages and salaries have been estimated in proportion to the number of operatives.
