An opportunity for every school leaver by next Easter

The chairman of the Manpower Serthe Youth Opportunities Programme.

Addressing careers officers at their Institute's conference in Exeter recently, conference in Exeter last month. Mr O'Brien said that more than 33,500 schemes had been approved under the programme up to the end of July. This meant that over 76,000 separate places had already been taken up.

Full year

In a full year the Youth Opportunities Programme is designed to provide work experience or training for as many as 234,000 young people who cannot find jobs, training or further education.

O'Brien: adequate preparation

plans that over 200,000 young people will have used the Programme by the end of March next year.

Mr O'Brien told the conference that experience gained on the Youth Opportunities Programme would be of great assistance in formulating policies designed

Special measures are proving cost-effective says **Employment Secretary**

vices Commission, Mr Richard O'Brien, special employment and training measures has pledged that no 1978 school leaver introduced by the Government to make still without a job by Easter next year an immediate impact on unemployment will not have an offer of a place on are proving to be cost-effective, Employment Secretary Mr Albert Booth explained to careers specialists at the

> "An equivalent expenditure on general reflationary measures would have much less impact on unemployment," said Mr Booth. "It is estimated that the cost of an extra job through general reflation is about ten times-approximately £13,000 -the cost of a job or training oppor-

Focus on jobs and young people at Exeter careers conference

tion for all young people seeking work. The need for such preparation was underlined by the fact that "in a tight labour market it was the 40 per cent or so who left school with minimal or nonexistent qualifications and experience whose chances of employment were least promising."

Joint study group

Last month, a joint Government and MSC study group was announced to look into ways of extending and improving the arrangements for vocational preparation of young people. This will contribute to the Government's White Paper, proposed next year, surveying the whole field of education and training policies for the 16-18 age group and putting forward proposals for offering them some to provide adequate vocational prepara- approved form of vocational preparation.

Because they are labour intensive, tunity provided through special pro-

News and Notes

The programmes were of course not substitute for reflation but a supplement to policies designed to achieve faster growth and improved industrial performance, Mr Booth declared. Nor were the places provided on programmes for young people meant as a substitute for employment, but a positive alternative to unemployment.

More careers advice for brighter pupils

Some schools had not allowed the Careers Service to play its full part in advising more able youngsters in the past, Mr Albert Booth, the Employment Secretary, told the annual conference of the Institute of Careers Officers.

"I believe this is changing," said Mr Booth. "We must certainly get away from the idea that because a youngster is heading for higher education he or she does not need careers advice."

Interest stimulated

Careers officers from all over the country were told that manufacturing industry must be enabled to attract the brightest people into careers. Young people who were capable of getting good qualifications at universities or polytechnics must have their interest in industrial careers stimulated while they were still at school, said Mr Booth.

He stressed that this was not merely a matter of ensuring that they considered industrial careers when they had finished their education. It was vital to ensure that the education system itself produced the well-qualified people needed at the

If bright children could see the interest and challenge of careers in industry, they might be motivated to choose suitable subjects at school and in their higher education, he declared.

News and Notes

Thousands of jobs could be ensured through investment assistance

"Some new schemes with general appli-

cation throughout industry have been

introduced recently—the Energy Conser-

vation Scheme for boiler plant modern-

isation and the Microprocessor Appli-

cation and Microelectronics Industry

Support Schemes to encourage industry to

explore the advantages of microelectronic

techniques and adopt them where they can

be of benefit."

Some 17,000 permanent jobs should be created and another 5,800 safeguarded by £120 million investment assistance from the Department of Industry.

The Selective Investment Scheme and the earlier Accelerated Projects Scheme have provided assistance of over £120 million for almost 200 projects throughout industry involving investment of over £1,000 million. A further 200 or so projects costing £1,600 million are under considera-

These two schemes alone should provide an annual benefit to the balance of payments of more than £700 million and orders to UK plant, equipment and construction industries of £650 million.

In addition the Government has allocated £272.5 million to 14 industry schemes towards projects involving new product development, new equipment and buildings, restructuring and rationalisation.

Manufacturing priority

Speaking to the seventh World Planning Congress in London, Mr Alan Williams, Minister of State for Industry, said, "The Government has tried to make a reality of its commitment to give manufacturing industry greater priority than ever before. It has sought to provide industry with greater stability and increased incentive for investment.

Sheltered employment

-- last month's Gazette

In last month's issue, in the item "Advisory council chairman is informed of sheltered employment findings", a figure of £3 million was quoted for the total Manpower Service Commission's expenditure on grants and allowances towards the employment of disabled people in 1977/78. This figure should have read £30 million.

We would also like to correct any impression that may have been created in last month's article, A sheltered workshop by John Gennard and Michael Wright, that the London School of Economics was formally involved in the exercise which led to that article. The authors were in fact commissioned in a personal capacity.

Retail bookselling wage rates to go up

The Retail Bookselling and Stationery Trades Wages Council (Great Britain) has said it intends to increase the rates for all workers aged 21 years or over by £7.50, with proportionate increases for younger workers from September 29, 1978. This will give a minimum rate of £42.50 for an adult shop assistant in the principal towns outside London.

British apprentices find gold in Korea

Picture: Road Transport Industry Training Board

Britain's apprentices proved they are among the best in the world at the International Youth Skill Olympics in Korea last month. The boys returned with gold medals in bricklaying and plastering, silver medals in plumbing and auto-engineering-and an honourable mention in hairdressing.

This was the 24th International Skill Olympics to be held, with 1000 boys and girls from 15 countries competing for gold, silver and bronze medals in 32 trades. The British entry was organised by the Society for the Promotion of Vocational Training and Education with financial support from the Government, employers and various training organisations and institutions.

Boost to interest in skill training

Mr John Golding, Parliamentary Under Secretary of State for Employment, told the team as they set off for the competition, "There are two things to be gained from the Skill Olympics. Firstly, it will boost interest in skill training in the United Kingdom and that will contribute to our performance. Better training is important to our economic prospects. Secondly, it will promote friendship and understanding among the young people who take part."

Employers are reluctant to adopt equal opportunities policies

The apparent reluctance of employers to adopt equal opportunities policies has been described by employment minister. Mr John Grant as "disappointing and puzzling"

He told senior managers at an equal opportunities seminar at the London Business School recently that the existence of discrimination at work continued to be widespread.

Mr Grant declared: "Discrimination of any kind is harmful both to industry and to the individual. It robs industry of a full choice and use of talent; and it denies the individual the opportunity to make the best of his or her abilities, thus affecting personal dignity and satisfaction, earning capacity and general attitude to life in an allegedly free society.

"We know that discrimination is widespread and happening around us all the time and we deplore it. We know that concerted and determined action must be taken to eliminate it."

Redundancy payments totalled £43 million

Redundancy Fund payments for the period April 1 to June 30, 1978 were made to 63,053 employees, including 13 government employees. They received payments totalling £43,285,000. Employers liable to make payments contributed £23,679,000 net of rebate, and the cost to the Fund in rebates to employers and direct payments to employees was £19,606,000. The Fund is financed by contributions from employers in general.

Industrial analysis

Analysis of the figures for all payments made during the quarter shows that industries in which highest numbers were recorded (to the nearest 100) were: construction (9,700) distributive trades (8,300) mechanical engineering (4,600) food, drink and tobacco (4,100) metal manufacture (4,000) textiles (4,000) miscellaneous services (3,700).

Employers had a central and crucial part to play in operating equal opportunities policies, said Mr Grant. But the efforts made so far were not commensurate with the size of the problem.

Positive contribution

He continued: "This apparent reluctance by employers to adopt such policies is rather puzzling when one considers that in taking such a step they are not only making a positive contribution to removing discrimination in the workplace but at the same time they are ensuring that more effective use is made of their manpower."

They would also help to create a working environment free of tensions and stresses which arose when workers believed they were being denied the equality of treatment to which they were entitled, said Mr Grant.

New MD at Remploy

Mr Trevor B. Owen, has been appointed managing director of Remploy Ltd. He took up his duties in September and succeeds Mr Oliver Philpot.

Mr Owen was ICI personnel manager-development, and functional head of the company's manplanning, recruitment. organisation development, and training resources.

Rights of individual workers now covered in one quide

A quick-reference guide for employers on the individual rights of their employees has been published by the Department of Employment.

The guide, Individual Rights for Employees, gives the various individual rights of employees under employment protection legislation and sets out the corresponding obligations on employers. It includes the provisions of the Employment Protection (Consolidation) Act 1978 which comes into force on November 1. Protection against sex and race discrimination is also covered.

Sections

Sections of the guide deal with industrial tribunals, contracts of employment, trade union membership and activities, time off work, rights of the expectant mother, unfair dismissal, redundancy pay. Further reading for those who wish to go into more detail on particular aspects is suggested.

Widely available

The Department of Employment is making efforts to make the guide, which is free, as widely available as possible. In addition to copies being available in Unemployment Benefit Offices, Jobcentres and Employment Offices, it has been sent to employer organisations and will be offered through a reply coupon in the national press.

Unemployment benefit payments down

Expenditure on unemployment benefit in Great Britain (excluding cost of administration) for the 13 weeks ending August 25, 1978 amounted to approximately £153,018,000.

During the 13 weeks ending May 26, 1978 the corresponding figure was £179,170,000 and during the 13 weeks ending August 26, 1977 the figure was £124,491,000.

News and Notes

Comprehensive regulations would protect workers from radiation

A proposed comprehensive framework of controls on the use of ionising radiations, designed to give greater radiological protection to workers and the general public, is outlined in a consultative document*, just published by the Health and Safety Commission.

The consultative document proposes that draft regulations be drawn up under the Health and Safety at Work Act to replace the present Ionising Radiations Regulations of 1968 and 1969—which only apply to factory premises—and the various voluntary codes of practice observed by other users such as in medicine, dentistry, research and teaching. The regulations would lay down standards for the health protection of all workers against the danger of ionising radiations and for the general public in respect of radiation arising from work activities.

Detailed guidance notes

Because of the difficulties of building sufficient flexibility into one set of proposed regulations to satisfy all types of work, the consultative document advocates approved codes of practice supplemented by detailed guidance notes.

While failure to comply with a code would be prima facie evidence of a breach of the regulations, other equally effective methods of achieving basic standards would be accepted, to avoid unnecessary rigidity particularly with advancing knowledge and techniques.

Among the major areas covered in the outline proposals for the new regulations

- prior reporting of processing, handling, use and storage of radioactive substances and any other activity which involves a hazard from ionising radiations. Similar notification requirements are suggested for the transport of radioactive substances with certain exceptions. Exemptions would be given;
- reporting of incidents involving the loss, theft or dispersal of radioactive substances:
- a requirement that the exposure of persons to ionising radiations should be kept as low as reasonably

Trade union independence—latest returns from Certification Officer

Since April 10, 1978 the Certification Officer (Mr. John Edwards) has issued certificates of independence to a further nine trade unions under section 8 of the Employment Protection Act 1975. They are:

Association of Education Officers Association of Magisterial Officers British Transport Officers' Guild Commercial Union Group Staff Association Educational Institute of Scotland Guinness Brewing Staff Association (UK) Leicester Building Society Staff Association Society of Union Employees (NUPE) Sun Life Staff Association

An application from the following trade union has been refused:

Phoenix Staff Union

Certificates have now been issued to 289 trade unions (of which 158 are affiliated to the TUC or are constituents of affiliated unions), 33 applications have been refused, four applications have been withdrawn and one has lapsed.

The certificates issued to the following trade unions have been cancelled as a result of their transfers of engagements to other trade unions:

Guardian Royal Exchange Staff Union

practicable and, in no case, to receive a dose in excess of the limits to be specified in a schedule to the proposed regulations;

the designation as "classified workers" of those liable to receive more than 30 per cent of the annual dose limit at work. These workers would be subject to medical surveillance and to monitoring and recording of doses actually incurred. All excessive doses sustained would be reportable. Radiation dose records for classified

How the approved codes would work

The consultative document gives details of proposals for an approved code of practice on "general matters" designed to assist in complying with the general requirements of the suggested regulations. This code, says the document, would cover general matters in the control of ionising radiations. Separate codes would cover specific fields of work such as industrial radiography, medical, dental, veterinary or transport.

At a later stage, other codes of practice on specific topics might be produced, covering such things as special areas of research (for example tracer use); particular aspects of medical practice (such as nuclear medicine); power and research reactor use; and nuclear fuel processing and fabrication.

- workers should be maintained by approved personal dosimetry laboratories instead of by employers;
- the designation of work areas, classified according to the degree of potential for worker radiation exposure;
- where it is possible that workers will receive more than 10 per cent of the maximum permissible annual dose, employers would be required to appoint and consult qualified radiation protection advisers, while radiation protection supervisors would be appointed locally to give immediate practical supervision, and so extend in-house measurement and control of radiation risks;
- a requirement that employers prepare emergency plans for dealing with any reasonably foreseeable situation which might give rise to significant levels of exposure. Employees would be instructed as to arrangements and rehearsals required;
- a requirement for the preparation of hazard survey reports for sites other than those licensed under the Nuclear Installations Act of 1965, in which substantial quantities of dispersible radioactive materials or fissile materials are to be processed, manufactured, used or stored.

*Ionising Radiations Regulations: Proposals for Provisions on Radiological Protection, Consultative Document, HM Stationery Office, price 50p plus postage.

Health and safety chairman meets one of Britain's first safety representatives as new code comes into operation

Mr Bill Simpson (third from left) pictured with Colleen Leader and colleagues at Thorn Lighting.

A Code of Practice on time off work for safety representatives to undergo training came into force on October 1. It gives guidance to employers and unions concerned with training employees appointed under the Safety Representatives and Safety Committees Regulations which also took effect at the beginning of this month.

Mr Bill Simpson, chairman of the Health and Safety Commission, recently met one of Britain's first worker safety representatives, Colleen Leader.

Lamp inspector

Colleen is a lamp inspector at Thorn Lighting's pilot plant in Leicester and will represent over 60 workers. She was appointed by the Amalgamated Union of Engineering Workers and the new law gives her the right to inspect her workplace, investigate accidents and receive technical and legal information which employees need.

Welcoming the appointment of the first safety representatives, Mr Simpson said, "These regulations allowing trade unions to appoint safety watchdogs on behalf of their workmates are a milestone for the safety and health of everyone at work in Britain.

Additional eyes

"Their estimated number means that there could be around 150,000 additional pairs of eyes available to help prevent accidents and ill-health at work. Surely this must result in a real impact being made over the next decade on the total of people killed and injured every week at work and a corresponding cut in the £1,800 million that industrial accidents cost this country every year."

Note: Copies of the Code of Practice are available free from offices of the Health and Safety Executive. It should be read in conjunction with the booklet Safety Representatives and Safety Committees—available from HMSO.

Guide to problem solving through public sector research bodies

News and Notes

A new edition of the Department of Industry's booklet Technical Services for Industry is now available.

It is a guide to public sector research establishments and provides the most appropriate source of information or assistance for a wide variety of technical problems.

Facilities

More than 150 research facilities are described including those of nine Government departments, 36 industrial research associations and four research councils. The research activities, available services and publications of each laboratory are given as well as points of contact. In addition, details of related information and other services are given.

Comprehensive index

Designed primarily for information scientists, industrial liaison officers, consultants and others concerned with problem-solving in industry, it provides a comprehensive index of subjects and organisations.

Technical Services for Industry 1977 available free from the Technology Reports Centre, Orpington, Kent BR5 3RF (tel. Orpington 32111 ext 246) or any Department of Industry Regional Office.

Construction accidents

The Health and Safety Executive has asked us to point out that an error in their press release on the Construction Health and Safety Report 1976 was repeated in the April issue of Employment Gazette. The release quoted the report as having predicted that 400,000 people would be "seriously" injured in the construction industry over the next ten years. The report in fact refers the number of "reportable" accidents forecast for that period those accidents which involve an absence from work of more than three days.

The pattern of pay, April 1978: key results of the New **Earnings Survey**

The key results of the New Earnings Survey give a wide range of information on earnings and hours of employees in April 1978, In particular, the article shows how the earnings of individuals are spread about the overall average figures for groups of workers: for example, among men and women in manual and non-manual occupations in different industries, regions and age-groups. It also shows the variation between different groups of workers in the way in which total earnings are made up from such components as overtime pay, bonuses and incentive payments and premium payments for shift, night or weekend work. The final section of this article gives some general results which illustrate the kind of information provided in the 21 tables which accompany the

The information relates to employees in Great Britain and is obtained from the Department of Employment New Earnings Survey. These surve; results correspond to those for April 1977 published in the October 1977 issue of Employment Gazette.

There are two sets of analyses:

Summary analyses—tables 1 and 14 to 21—which give general results for very broad categories of workers irrespective of their particular industries, occupations, agegroups and regions.

Streamlined analyses—tables 2 to 13—which give a selection of key results for full-time adult workers affected by particular major collective wage agreements or within scope of wages boards or councils; for those in each major industry; for those in each major occupation; for those in each age-group, and for those in each region.

The topics covered are:

- average gross weekly earnings and their make-up in terms of
 - -overtime pay;
 - -payments-by-results, bonuses, commission, and other incentive payments; and
 - -premium payments for shift, night and weekend
- average gross hourly earnings:
- the distributions of weekly and hourly earnings of members of each group around the averages:
- average weekly hours and overtime hours:
- the distributions of hours around the averages:
- increases in average earnings between April 1977 and April 1978.

It is hoped that this compact form of presentation will again give general readers of Employment Gazette most, if not all, of the information they need from the survey without delay and in a convenient way.

Detailed analyses published elsewhere

As usual, the full results of the survey are being given in a six-part publication—New Earning Survey 1978, Parts A to F. Part B is already available, giving detailed results for collective agreements and wages boards and councils. Part A will be available in mid-November, including the streamlined analysis and a fuller set of summary analyses, together with a detailed account of the survey method, classifications, definitions and so on. Detailed results for particular industries, particular occupations and regions will be given in Parts C, D and E respectively and for part-time women workers in Part F. Analyses of employees by the type of collective agreement affecting them, based on a special 1978 survey question, will also be given

Coverage

Since 1975, the survey has covered only those employees who were members of Pay-as-you-earn (PAYE) schemes for tax and national insurance purposes and for whom Inland Revenue tax offices held records, in February, incorporating national insurance reference numbers. The survey covers employees paying national insurance contributions through PAYE schemes, even those paying no income tax. The full-time adult employees covered by the survey are representative of virtually all full-time adults. On the other hand, the part-time employees covered are no longer representative of all part-time workers. Most of those with earnings below the deduction card limits for tax and national insurance purposes are not covered. These are mainly women with part-time jobs and young people. On the other hand, someone who is a member of more than one PAYE scheme may appear more than once in the sample; for example, as both a full-time and a parttime worker, or twice or more as a part-time worker.

Survey method

The survey is based on a one per cent random sample of employees, selected in a completely impersonal way, so that everyone had an equal chance of being included. Those selected are representative of all members of PAYE schemes, of all categories in all occupations, both manual and non-manual, in businesses of all kinds and sizes in

The sample each year comprises all those whose national insurance numbers end with a specified pair of digits. The

same pair of digits was specified for the 1977 and 1978 surveys, and so there was a substantial overlap between the 1977 and 1978 samples. Those individuals for whom returns were received in both the 1977 and 1978 surveys are said to form a matched sample. More reliable estimates of changes in average earnings between two surveys are obtained when there is such a large overlap, because the margins of error attributable to sampling are reduced.

Confidentiality

The data on earnings are obtained, under the authority of the Statistics of Trade Act 1947, from the employers of employees selected in the sample. The information obtained in this way is treated as strictly confidential and is used only for the statistical purposes of the survey. The men and women about whom information is obtained are regarded simply as representatives of the industries, occupations, regions, age and sex groups, and so on, to which they belong. The name of the employee is on a perforated slip, which the employer is asked to detach from the completed return, so that the name cannot be seen by anyone handling the completed return. The data extracted from the returns for computer processing include neither the name nor the address of either the employee or the employer.

The resulting analyses show no information about identifiable people or private businesses. Where results are given for groups of employees of specific employers in the public sector, such as the Post Office or the National Coal Board, the employer's consent to publication has been obtained.

Information obtained

The 1978 survey questionnaire was largely identical with that used in 1977. The minor changes which were made did not involve the questions on which the results given in this article are based.

The survey yields information on the gross weekly earnings (before deductions) of the employees in the sample for a particular pay-period which included Wednesday April 12, 1978 and also the make-up of their pay in terms of overtime pay, payment-by-results and other incentive payments, and shift and similar premium payments. Where pay had not been affected by absence, this was combined with information on hours to calculate hourly earnings (both including and excluding the effects of overtime). The survey showed the industry, occupation, and age-group of the employees concerned; the region in which they worked; and whether they were affected by one of the main national collective wage agreements or within scope of wages boards

An employee's wage as measured in completed years at the beginning of 1978, or, for analyses of the matched sample, at the beginning of 1977.

Increases in average earnings between April 1977 and

An important advantage of using a survey design which provides a matched sample is that changes in average earnings between the two survey dates can be measured in alternative ways. First, by direct comparison of corresponding results of the two surveys to derive changes based on complete samples. Secondly, by restricting the comparison to those in the matched sample who were classified in a specified way in both surveys, to derive changes based on matched samples. The two measures are different and are used for different purposes. Either type of measure may relate to each of the various measures of average weekly earnings and hourly earnings used in the survey.

In measuring changes in average weekly earnings based on complete samples, there are two alternatives; those whose pay for the relevant survey pay-period was affected by absence may be either included in both years or excluded. In measuring changes based on matched samples, however, those whose pay for either period was affected by absence are normally excluded.

Changes based on complete samples

The increase based on complete samples is obtained by comparing the April 1978 estimate of average earnings of a specified group of workers with the corresponding April 1977 estimate for the corresponding group of workers in the 1977 survey. Some of the individuals in the group in 1978 would not have been in the corresponding 1977 group, and vice versa. The increase based on complete samples thus includes the effects of all kinds of changes in the composition of the group within the period; for example, persons entering or re-entering the occupation, leaving the occupation, retiring or becoming incapacitated or unemployed. It answers such questions as "How do the average earnings of full-time men in a particular occupation in April 1978 compare with the average earnings of full-time men in that occupation in April 1977?"

Estimates based on complete samples are given for some broad groups of workers in two of the summary analyses (tables 1 and 7), both as amounts and as percentages, for both weekly and hourly earnings, both including and excluding the effects of overtime. Corresponding sets of estimates for particular groups can be derived by direct comparison with the published 1977 survey results. For average gross weekly earnings, they are also given in the streamlined analyses—tables 2 to 11, in percentage terms. alongside the corresponding estimates based on matched samples. (The published estimates of changes based on complete samples are derived from comparisons with 1977 survey results which take into account some 1977 returns received too late for inclusion in the published 1977 survey results: they may therefore differ slightly from those derived from the published results).

Changes based on matched samples

The corresponding increase based on a matched sample is obtained by comparing the average earnings for April 1977 and April 1978 of those for whom information was obtained in both surveys, who were classified to the same specified group in each survey and whose pay for each period was not affected by absence.

Estimates based on matched samples thus exclude the effects of labour turnover and other changes in the composition of the sample within the period. They still include the effects of changes in overtime earnings (unless explicitly excluded) and, for example, payment-by-results payments, bonuses or commission and other incentive payments, and miscellaneous components of pay, in addition to the effects of changes in rates of pay resulting from collective bargaining, promotions and up-grading, salary and other scale increments and merit increases in pay. In particular, for groups in which there are incremental salary scales, the increase in average earnings based on matched samples will include the effect of the increments received

during the period by those remaining in the group, but take no account of those retiring at the top of the scale or leaving the group being replaced by others joining at the bottom of the scale. Consequently, even when these increments do not result in any increase in the average salary per head within the group, the increments will account for part of the increase in average earnings of the matched sample. Estimates of increases based on matched samples, answer such questions as "By how much did the average earnings of men who were employed in a particular occupation at both survey dates increase between April 1977 and

The extent to which those affected, directly or indirectly, by particular collective agreements are identified in the survey is liable to be incomplete and to vary from year to year. Increases in average earnings based on complete samples (but not those based on matched samples) given in analyses by agreement tables 2 and 3 may thus be attributable in part to these variations in reporting

Estimates based on matched samples for some broad groups of workers are given in two of the summary analyses (tables 1 and 18). Since they cannot be derived by direct comparison with published 1977 survey results, they are being given for particular groups in separate detailed analyses in the various parts of the comprehensive booklet of results, as usual. As mentioned above, the percentage increase in average gross weekly earnings is given in the streamlined analyses, alongside the corresponding estimate based on complete samples.

Effect of delayed pay settlements

Where, following delayed pay settlements, the earnings for the April pay-period are increased retrospectively after the survey returns have been completed, the effect of these increases will not be reflected in the survey results; they will be reflected in the results of the following year's survey. This can lead to unexpected results for groups who normally receive an annual increase with an effective date shortly before the date of the survey. If the increase is implemented promptly in one year but delayed in the following year, the difference between the earnings recorded in the two surveys will reflect no annual increase; when the situation is reversed it will reflect two annual increases. Where either situation is known to have occurred, the estimates of the changes in earnings between successive surveys are omitted from tables 2 to 9 but given in footnotes to these tables.

Description of the tables

Most of the results given in the tables relate to full-time employees. A full-time employee is generally one expected to work for more than 30 hours in a normal week (excluding main meal-breaks and all overtime); in teaching, one working at least 25 hours in a normal week in term; or if normal hours are not specified for the employee, because of the nature of the job, an employee regarded as fulltime by the employer.

Summary of general results

Table 1 is a summary of the key results of the survey for all full-time adult workers in all occupations in all industries combined. There are separate results for each of four categories: men aged 21 and over and women aged 18 and over at January 1, 1978, distinguishing those in manual and those in non-manual occupations. For each category, the table shows first the information, obtained from the survey, on gross weekly earnings for April 1978, and the contributions which (i) overtime payments, (ii) payments-by results, bonuses, commission and other incentive payments and (iii) shift and similar premium payments made to total average earnings. It then shows the distribution of earnings (the proportions of employees who earned less or more than certain amounts) and gives corresponding information on hourly earnings and on hours. The percentages of employees who received overtime pay, payment-by-results or other incentive payments and a shift or similar premium and the average amounts which they received are also shown. The table then gives increases in average earnings between April 1977 and April 1978 based on matched and complete samples. Finally some approximate estimates for the public and private sectors of the economy are given.

Public and private sectors

Approximate estimates, based on the New Earnings Survey 1970 to 1977, of general averages of earnings of employees in the private sector, the public sector and the main branches of the public sector and indications of the dispersions of earnings round the averages were published in the December 1977 Department of Employment Gazette. As then foreshadowed, April 1978 estimates are now incorporated in table 1. They have all been compiled by method two described in that article; that method was previously used only for the public sector in total and not for its branches.

Streamlined analyses

Tables 2 to 13 show some corresponding key results for particular national collective agreements, wages boards and councils, industries, occupations, age-groups and regions. These tables are self-explanatory. They relate only to fulltime employees whose pay for the survey pay-period was not affected by absence and to adults (except for the analyses by age-group which also give results for juveniles).

Summary analyses

Tables 14 to 20 give further general results. Table 14 gives national estimates, based on the survey sample, of the numbers of full-time adults whose gross weekly earnings were below specified amounts in April 1978 and also the percentages with earnings in particular ranges. (It should be noted that articles in the Gazette in April 1973 and January 1977 showed that there are large up-anddown fluctuations from week to week in earnings, particularly for manual men, so that many of those whose earnings for a particular week are below certain levels are not permanently below these levels).

Tables 15 and 16 show how the dispersion or spread of earnings in April 1978 compares with the corresponding overall figures for earlier survey months from 1970. More detailed information about the dispersion of earnings in April 1978 is given later in tables 19 and 20.

Table 17 shows the average earnings for all full-time men and women in the April 1978 survey and how these compare with the corresponding averages for all full-time men and women in the April 1977 survey, in the form of increases based on complete samples. Separate results are given for those in manufacturing industries.

Table 18 gives corresponding estimates of increases in average earnings between April 1977 and April 1978 based on matched samples.

The sample and sampling errors

The results are based on 173,000 returns which were received by the Department satisfactorily completed, in time for processing. This is about 1,000 more than in 1977. This total includes 145,000 for full-time employees or about one in every 121 of the estimated total in full-time employment in Great Britain in April 1978—about one in every 120 full-time males and about one in every 125 full-time females. Many of the results relate to the 84,000 full time men aged 21 and over and 37,000 full-time women aged 18 and over, whose pay for the survey reference period was not reported to have been affected by absence. Details of the composition of the sample are given in table 21.

Because the estimates of earnings from the survey are based on samples, they may not have quite the same values as would have been obtained if the survey had covered every individual employee employed in Great Britain. In other words, they are subject to sampling errors. The potential margins of error due to the limited size of the sample can, however, be indicated by a measure which is known as the standard error. Estimates of the standard error are given in some of the summary analyses—tables 17 to 20. Information on the standard errors of the detailed results (including those given in the streamlined analyses) of the 1978 survey is being given in the various parts of the comprehensive booklet of results, being published separately. The chance that a survey estimate will differ from the true value by more than twice the standard error is only about one in twenty.

Reliability criteria for publication

Results for particular collective agreements, wages boards and councils, industries, occupations, age-groups and regions have been included in tables 2 to 13 only if based on survey information relating to at least 100 employees in the sample and if the percentage standard error of the April 1978 estimate of average gross weekly earnings is not more than 2.0 per cent. Estimates of increases in average earnings between April 1977 and 1978 based on matched samples are given in tables 2 to 11 only if based on a sample of at least 50 employees. Estimates of increases based on complete samples are obtained as differences between corresponding 1977 and 1978 results each of which is based on samples of at least 100 employees. Estimates of increases in average earnings are not given if the standard error is more than 4.0 per cent of the April 1977 estimate of average earnings; where this percentage exceeds 2.0 per cent, the estimated increase is bracketed.

Survey reference period

The survey information related to the pay-week (or other pay-period if the employee was paid less frequently) which included Wednesday, April 12, 1978. The results are therefore not necessarily representative of pay over a longer period. They may not take account of some delayed settlements which have had a retrospective effect on earnings for April, since the survey returns were completed. They do not of course take any account of those

changes in rates of pay which have subsequently become operative but have had no effect on earnings for April.

Collective agreements

The list of major national collective agreements used for the 1978 survey was that used for the 1977 survey, with some minor revisions.

General results—some examples

The survey's main purpose and usefulness is in the wealth of detail it gives about, for instance, the spread of earnings within particular industries and occupations. This article does not attempt to provide any detailed commentary on the figures—many different observations can be made, according to the topics which interest particular readers. The following general results are given as examples of what the 1978 survey shows. They relate to those whose pay for the survey reference period was not affected by

All adult workers (see table 16 on page 1162)

In April 1978 the average earnings of full-time adult employees aged 18 and over were £78.10 per week. The averages were £89.10 for men aged 21 and over, £87.10 for males aged 18 and over and £56.40 for women aged 18 and over. These averages, which include the effects of overtime, cover employees in both manual and nonmanual occupations in all industries.

If overtime pay, bonus, commission, payments-by-results and other incentive payments, and premium payments for shift, night and weekend work are excluded, the averages were £66.80 for full-time adult employees aged 18 and over, £74.10 for men aged 21 and over, £72.50 for males aged 18 and over and £53.20 for women aged 18 and over.

As the tables show, there are variations in average earnings between occupations, industries, age-groups and other groups of workers identified in the survey results. In addition within each group, the earnings of individuals vary and generally well over half earn less than the average for the group.

Manual workers (table 1)

In April 1978 the average gross weekly earnings of fulltime manual men aged 21 and over were about £80.70; those of full-time manual women aged 18 and over were about £49.40. The make-up of these totals was:

	Men 21 a			18 and over
	amount	per cent	amount	per cent
Overtime pay Payments-by-results,	£11-60	14	£1.70	3
bonus, commission, etc	£7·20	9	£4.80	10
Shift, etc, premium	£2.40	3	£0.90	2
Remainder	£59·50	74	£42.00	85
Total per week	£80·70	100	£49·40	100

Among full-time manual men about 43 per cent earned more than the average of £80.70, and about 57 per cent earned less than this average. Half of these manual men earned less than £77 and half more than £77. One quarter earned less than £63 per week and one quarter more than £93, and so the earnings of half the men were in the range £63 to £93 per week. Eighteen per cent earned more than £100 per week and about two per cent more than £150. One in every 15 earned under £50 and one in every 80

under £40. Their hourly earnings averaged about £1.75 per hour. One in every 80 earned less than £1 per hour, and one in four earned more than £2 per hour.

About 45 per cent of full-time manual women earned more than the average of £49.40, and about 55 per cent earned less than this average. Half of these manual women earned less than £48 per week and half more than £48. One quarter earned less than £40 per week and one quarter more than £57 per week, and so the earnings of half these women were in the range £40 to £57 per week. About 19 per cent earned more than £60 per week and three per cent more than £80. Twenty-six per cent earned under £40 per week and five per cent under £30. Their hourly earnings averaged about £1.25 per hour. One in every 50 earned less than 70 pence per hour, one in 10 less than 90 pence per hour, and one in 50 more than £2.00 per

Average weekly hours (excluding main-meal breaks) were much the same as in recent years; about 40 basic hours plus about six hours overtime for men, and about 381 basic hours plus about one hour of overtime for women.

Overtime pay and payment

For the survey reference period, about 58 per cent of manual men and 18 per cent of manual women received some overtime pay. Their average overtime pay per week was £20.10 for 10½ hours for men and £9.50 for about six

About 42 per cent of the men and 32 per cent of the women received either payments by results, bonus, commission or other incentive payments; the average payments per week being £17.00 for men and £15.30 for women.

About 23 per cent of the men and 11 per cent of the women received premium payments for shift, night or weekend work; the average payments per week being £10.30 for men and £7.90 for women.

Non-manual workers (table 1)

The average gross weekly earnings in April 1978 of full-time non-manual men aged 21 and over were about £100.70, those of full-time non-manual women aged 18 and over were about £59.10. Relatively few non-manual workers received overtime pay, bonuses and other additional payments or premium payments for shift, night and weekend work.

Their average hours were much the same as in April 1977, about $37\frac{1}{4}$ basic hours per week plus about $1\frac{1}{2}$ hours of paid overtime for men and about 361 basic hours plus about ½ hour of paid overtime for women. Overtime hours worked were reported only if they resulted in additional

About 60 per cent of non-manual men earned less than the average of £100.70; half earned more than £92 per week, 10 per cent more than £150, and 10 per cent less than £58. Half of these non-manual men earned between £72 and £117 per week. Just over three per cent earned more than £200 per week, and one per cent less than £40. Among non-manual women about 60 per cent earned less than the average of £59.10; half earned more than £54 per week, 10 per cent more than £89, and 10 per cent less than £37. Half of these non-manual women earned between £44 and £69 per week. About 38 per cent earned over £60 per week, five per cent earned more than £100, and nearly three per cent less than £30.

Increases between April 1977 and April 1978 (tables 17

As the regular Employment Gazette table 126 (page 1230) shows, for the complete sample the average weekly earnings of full-time adult employees aged 18 and over, including the effects of overtime, were £8.80 or 12.7 per cent, higher than in April 1977.

As already explained, the survey design allows increases in average earnings between two successive Aprils to be measured in two alternative ways; one by using the complete samples (table 17) and the other by using the matched sample (table 18).

Percentage increases between April 1977 and April 1978 in average weekly earnings, excluding overtime pay, of full time adults:

era, slavisu radade annibus kraun el ese esonomi sir	Base complete samples	ed on matched samples
Men aged 21 and over manual non-manual	12·5 13·0	12·7 13·9
Women aged 18 and over manual non-manual	12·5 9·8	12·3 12·0

As usual, for manual workers, the increases based on matched samples were not very different from those based on complete samples, but, because of the effect of promotions and other job changes incremental salary scales, for non-manual workers those averages based on matched samples were higher than those based on complete samples.

For manual workers, the increases for men and women were much the same. The increases for non-manual women, as measured by the survey, were depressed because pay settlements for NHS nurses and midwives, for Post Office telephonists and for some other groups were not implemented in time to be reflected in the 1978 survey results. The increases for non-manual men were higher than those for manual men.

Distribution of earnings (table 14)

The estimated total numbers of full-time employees in Great Britain in April 1978 whose pay was not affected by absence, were 10·1 million men aged 21 and over and 4.6 million women aged 18 and over. Of these, 0.1 million (11/4 per cent) men and 0.8 million (18 per cent) women had gross weekly earnings of under £40 in April; if overtime pay is excluded, the numbers were 0.2 million (11/2) per cent) men and 0.9 million (19 per cent) women. About 7 million (69 per cent) men and 0.9 million (19 per cent) women earned more than £70 per week: about 2.8 million (27 per cent) men and 0.2 million (four per cent) women earned over £100 per week. Around 150 thousand men earned £200 or more per week.

Regional earnings (tables 12 and 13)

Regional differences in average earnings occur for a variety of reasons-for example, differences in the industrial pattern or in the occupational structure—and do not necessarily imply different levels of earnings for the same kind of work. However regional differences are relatively small compared with differences between occupations and age-groups. Earnings in Greater London have

a large influence on the figures for the South East of England; and the figures for the South East have a large influence on the national averages. For example, only in the South East region (or more precisely in Greater London) are regional average earnings of either nonmanual men or women above the corresponding average for Great Britain.

Average gross weekly earnings of full-time manual men ranged from £73.30 in South West England to £84.80 in Northern England. The average for such men in Wales (£80.90) was close to the national average (£80.70), that for Scotland (£81.40) was a little higher than the national average. In the lower part of the earnings distribution. the lowest decile ranged from about £50 in South West England to about £56 in Northern England (this means that 10 per cent of the manual men in these regions earned less than these amounts). In the upper part of the distribution, the highest decile ranged from about £101 in South West England to about £116 in Northern England (10 per cent earned above these amounts). At the time of the survey, average overtime hours were lowest in Wales and highest in Scotland. Average hourly earnings, excluding the effects of overtime, ranged from £1.59 in South West England to £1.82 in Northern England.

The regional patterns for full-time non-manual men were different. Their average gross weekly earnings ranged from £94.10 in East Anglia to £107.80 in South East England. The lowest decile ranged from about £55 in South West England to about £61 in the South East. The highest decile ranged from about £137 in the West Midlands to about £163 in the South East.

Average earnings for manual women ranged from £45.90 per week and £1.17 per hour in South West England to £51.70 per week and £1.30 per hour in South East England. The lowest decile ranged from about £31 per week in South West England to about £35 in the South East and the West Midlands. The highest decile ranged from about £60 per week in East Anglia to about £72 in the South East. For non-manual women, average gross weekly earnings ranged from £55.30 in Yorkshire and Humberside to £63.60 in the South East. The lowest decile ranged from about £35 in South West England to about £40 in the South East. The highest decile ranged from £83 in Yorkshire and Humberside to £94 in South East England.

Age patterns (tables 10 and 11)

Although average earnings vary between age-groups, the pattern of these variations does not change much from year to year. The averages in the younger and older agegroups are lower than in the intermediate groups. Amongst manual men, those in their thirties have the highest average earnings, whereas for non-manual men those in their forties have the highest average. Manual women in their late twenties have the highest average earnings, but among non-manual women those in their thirties have the highest earnings. The variations are greater among men than among women. Although, above the age of 25, non-manual men on average earn more than manual men of the same age, among younger men, those in manual occupations on average earn more than those in non-manual occupations.

Distributions of weekly earnings Distributions of hourly earnings	20	1100

"PBR" etc "payments" means payments by results, bonuses, commission and other incentive payments.

"Shift etc premium payments" means premium payments for shift, night and weekend work not treated as overtime. Quantiles—in a group, 10 per cent earn less than the decile earnings, 25 per cent less than the lower quartile, 50 per cent less

than the median, 75 per cent less than the upper quartile and 90 per cent less than the highest decile.

"36 to 40" hours means over 36 but not over 40 hours.

"SIC" means Standard Industrial Classification "MLH" means a minimum list heading in the SIC.

"nes" means not elsewhere specified in the industrial classification.

"nie" means not identified elsewhere in the occupational classification.

Brackets () denote that the percentage increase has a high standard error.

"na" means not available.

Note: Because no "annual increases" under these agreements were implemented between 1977 and 1978 surveys, the survey estimates of increases in average earnings are not comparable with those for most other agreements in this table. The survey estimates of the percentage increases based on complete and matched samples respectively for these agreements were: Milk product/milk processing and distribution NINC—England and Wales, —0.1 and 1.0; Electricity supply, workers other than building operatives NIIC, 1.3 and 1.7; Post Office, general clerical and executive grades, 1.6 and 0.5, postal clerical and executive grades, 3.3 and 3.1, and manipulative grades, 3.0 and 4.4; National Health Service, nurses and midwives Whitley Council, 2.1 and 4.3.

Note: Because no "annual increases" for certain employees in these industries were implemented between the 1977 and 1978 surveys, the survey estimates of increases in average earnings are not comparable with those for most other industries in this table. The survey estimates of the percentage increases based on complete and matched samples respectively for these industries were: Milk and milk products, 0.3 and 4.2; Electricity, 2.2 and 2.0; Postal services and telecommunications, 5.9 and 7.2.

Because no "annual increases" for certain employees in these industries were implemented between the 1977 and 1978 surveys, the survey estimates of increases in average earnings are not comparable with those for most other industries in this table. The survey estimates of the percentage increases based on complete and matched samples respectively for these industries were: Postal services and telecommunications, 4-6 and 5-0; Medical and dental services, 3-9 and 5-7.

Notes: 1. From 1974, age has been measured in completed years at January 1, not, as previously, at the time of the survey.

2. From 1975, the survey has covered only employees who are members of PAYE schemes for tax/national insurance purposes.

An order form for the six parts of the full New Earnings Survey 1978 will be found on page 1248. The subscription, including postage, is £21.90, and a special binder for the series can also be bought from HMSO, price £1.25 (£1.81 by post).

Notes: 1. The standard errors in this column relate to the estimates for gross weekly earnings excluding those whose pay was affected by absence. The standard errors of the corresponding estimates including those whose pay was affected by absence are similar.

2. The standard errors in this column relate to the estimates for gross hourly earnings including the effects of overtime pay and overtime hours. The standard errors of the corresponding estimates excluding the effects of overtime pay and overtime hours are similar.

* The numbers in the sample to which the estimates of average earnings in April 1978 relate are given in table 21.

Notes: 1. The standard errors given in these columns relate to the estimated increases in average earnings including overtime pay (and overtime hours). The standard errors of the corresponding estimates excluding overtime pay (and overtime hours) are similar.

2. This column gives (a) the numbers in the matched sample to whom the estimated increases in weekly earnings relate and (b) these numbers as percentages of the numbers in the complete 1978 sample whose pay was not affected by absence (see table 21). The numbers on which the estimated increases in hourly earnings are based are a little lower.

3. In this and other tables based on matched samples, age is measured at January 1, 1977 (not 1978).

non-manual total

Notes: 1. Analyses of weekly earnings generally exclude employees who received no pay for the survey pay-period. Table 19 is an exception.

2. Analyses of distributions of weekly earnings generally exclude employees whose pay was affected by absence during the survey pay-period as well as those who received no pay for the pay-period. Table 19 is an exception.

3. Analyses of hourly earnings and of total weekly hours exclude employees whose pay was affected by absence during the survey pay-period and those for whom normal basic hours were not reported.

hours were not reported,

4. Where returns relating to two (or more) separate jobs held by the employee were received, the employee is counted twice (or more) in this analysis.

Table I (continued) Quarterly series of employees in employment: Great Britain

In the second quarter of 1978 the number of employees in Great Britain, seasonally adjusted, was 22,200,000, showing a small increase of 17,000 over the previous quarter. Female employment increased by 21,000 to 9,133,000, but the level of male employment at 13,067,000 was virtually unchanged. Compared with a year earlier the total number of employees in June was 34,000 higher with 68,000 more females in employment and 34,000 fewer males.

Latest seasonally adjusted figures for employment in manufacturing show a small fall in August of 20,000 to 7,177,000 after a period of nine months when employment showed little variation.

The following tables, which have not been seasonally adjusted, show that 12,768,000 people were employed in service industries in June 1978—96,000 more than a year earlier with most of this increase, 84,000, taking place in female employment. The sectors where nearly all of the overall increase occurred were insurance, banking, finance and business services (23,000), professional and scientific services (24,000) and miscellaneous services (47,000)—other sectors showed little change.

All estimates in this article are provisional and they will be revised in due course when the results of the 1977 and, later, the 1978 censuses of employment become available.

National government service									

Notes: Because the figures have been rounded independently the totals may differ from the sum of the components. Although the estimates are given in hundreds, this does not imply that they are reliable to that degree of precision. They are shown in this way in order to give as much information as is available about the extent of the change from one quarter to the next.

* Estimates after June 1976 are provisional and are subject to revision when the results of the June 1977 census of employment become available.

† Excludes private domestic service.

† The industries included in the Index of Production total are orders II-XXI of SIC (1968). The service industries comprise orders XXII-XXVII.

§ The figures for "sea transport" and "port and inland water transport" are combined and those for "accountancy services", "legal services" "religious organisations" are included in "other professional and scientific services".

|| These figures cover only a proportion of national and local government employees. They exclude those engaged in, for example, building, education and health, which are activities separately identified elsewhere in the classification. They include employees in police forces, fire brigades and other national and local government services which are not activities identified elsewhere. Members of HM Forces are excluded. Comprehensive figures for all employees of local authorities, analysed according to type of service, are published quarterly in Employment Gazette.

**From February 1978 there has been a change in the method of estimating the construction figures. For further details see page 511 of the May 1978 issue of Employment Gazette.

See notes to table 1. From June 1978 the figures for Wales include about 6,000 employees in the Welsh sector of the Chester employment office area which were previously included in the North West Region figures. (See page 816 of the July 1978 issue of Employment Gazette.)

Earnings in engineering, shipbuilding and chemicals: June 1978

Occupational details of earnings and hours of manual workers

This regular survey provides occupational details of earnings and hours of adult male manual workers in engineering, shipbuilding and ship-repairing and chemical manufacture in Great Britain in June each year. It is carried out by the Department of Employment under the Statistics of Trade Act, 1947. In shipbuilding and ship-repairing and in chemical manufacture there is a similar survey in January also.

The results of the June 1978 survey are given in the following tables, together with some comparisons with results of the June 1977 survey. Corresponding results of

that survey were published in the October 1977 issue of Employment Gazette and those of the January 1978 survey in the May 1978 issue. Summary results of the survey over a longer period are given in index form each month in table 128 of Employment Gazette.

The June 1978 survey results are given in the form of average weekly and hourly earnings, (both including and excluding overtime premium payments) and average weekly hours for full-time adult male manual workers. They include details for skilled workers, semi-skilled workers and labourers, separately for timeworkers and payment-byresults workers.

Table 1 Returns received

Industry group	Size range of firm	Number of returns re- ceived suitable for processing	Number of adult males included on these returns
Engineering	500 or more	519	505,880
	100–499	885	133,690
	25–99	407	18,330
Shipbuilding and ship-repairing	500 or more	29	62,910
	100-499	29	6,080
	25-99	10	660
Chemical manufacture	500 or more	61	35,430
	100-499	139	18,010
	25-99	56	2,330

Tables of results

Table 1 gives details of the coverage.

Tables 2, 3 and 4 give June 1978 summary results, and comparisons with June 1977 results, for:

- (a) average weekly earnings including overtime premium, and
- (b) average hourly earnings excluding overtime premium.

Tables 5-12 give more detailed results, including some regional results.

Survey sample

The sampling frame used for the survey was the list of addresses of manufacturing establishments used for the Department's October surveys of the earnings and hours of manual workers. Survey forms were sent to all establishments with 500 or more manual employees in the industries covered, to a 50 per cent sample of those with from 100 to 499 employees, and to a 10 per cent sample of those with from 25 to 99 employees. The survey did not cover smaller establishments with under 25 employees.

Establishments covered

In the current survey about 2,610 establishments with 25 or more manual employees in the industries concerned were asked to provide details, under each specified occupational heading, of the numbers of full-time manual men employed in the pay-week which included June 7, 1978, the total number of hours worked (including overtime), the total number of overtime hours worked, their total earnings and the total overtime premium payments. Overall, 2,135 forms suitable for processing were returned (see table 1). Where work at an establishment was stopped for all or part of the specified pay-week, because of a general or local holiday, breakdown, fire or industrial dispute, details for the nearest week of an ordinary character were substituted.

Industries and occupations covered by the survey

For the purpose of this survey, the engineering group of industries comprises those industries in Orders VII, IX (part), X (part), XI and XII (part) of the Standard Industrial Classification, and the chemical manufacturing group comprises those industries in Order V, which are listed at the end of this article. The shipbuilding and ship-repairing industry comprises part of Order X; the other partmarine engineering—belongs to the engineering group. The survey did not extend to Northern Ireland.

The survey did not cover all full-time adult male manual workers in these industries: for example, transport workers, storemen, warehousemen and canteen workers were not included. The occupations for which information was sought varied between the industries covered. The specified occupations were grouped to distinguish between skilled men, semi-skilled men and labourers; in table 2, for example.

In the engineering industries and chemical manufacture, time-workers were distinguished from workers paid by results. In shipbuilding and ship-repairing, however, information for the individual occupations was reported only for those paid by results; the information about timeworkers was reported only in summary form. In the engineering industries and chemical manufacture, lieu workers (that is to say workers receiving compensatory payments in lieu of payments-by-results) were treated as timeworkers; in shipbuilding and ship-repairing, however, such workers were treated as payment-by-results workers.

Number of workers covered

Table 1 gives the numbers of workers actually included in the returns. After grossing-up to allow for sampling fractions, these represent about one million full-time adult male manual workers in engineering industries, 82,000 in shipbuilding and ship-repairing and 95,000 in chemical manufacture, in firms with 25 or more employees, and at work for the whole or part of the pay-week which included June 7, 1978. These numbers are equivalent to about four-fifths of the total numbers of full-time adult male workers in the manual occupations concerned in each of these groups of industries.

Comparisons with results of earlier surveys

When comparisons are made with corresponding results of earlier surveys, it is necessary to bear in mind that earnings in the particular reference pay-week used for the

*‡See footnotes below table 12.

survey may not be representative of pay over longer periods, particularly when overtime pay is included. The incidence of overtime is liable to vary. For payment-byresults workers, average earnings fluctuate with changes in output per head. The extent to which average earnings are affected by those who were paid for less than a full week, because of short-time working or absences of various kirfds, will also vary from week to week. Since they are not based on matched samples of either establishments or employees, the changes in average earnings over the previous 12 months, as measured by the survey, include the effects of turnover in the sample of establishments submitting returns and of labour turnover within the establishments.

Definition of terms

Adult males—Males who are in receipt of the appropriate adult rates of wages.

Weekly earnings—All earnings figures in this article represent the actual earnings in the week specified, including bonuses and guaranteed payments (including any under the Employment Protection Act 1975), before any deductions were made for income tax, national insurance contributions, etc. Included in the averages are the proportionate weekly amounts of non-contractual gifts and bonuses paid otherwise than weekly; for example, those paid yearly, half-yearly or monthly: where the amount of the current bonus is not known, the amount paid for the previous bonus period has been used for the calculation.

Weekly hours—The figures relate to the total number of hours actually worked in the week, including overtime but excluding recognised intervals for meals, etc. They exclude all time lost from any cause but include any periods during which workers, although not working, were available for work and for which a guaranteed wage was payable to them.

^{||*¶§} See footnotes below table 12.

Overtime premium—These figures relate to money paid for the premium element of overtime only; for example, if a man whose time rate is 150p per hour and who is paid "time-and-one-third" for overtime works eight hours overtime, his premium is 50p per hour (a third of 150p) and total overtime premium paid is £4.00. Shift allowances and premium payments for normal week-end work for shift workers on continuous shift systems are not regarded as overtime premium. In shipbuilding and ship-repairing, Sunday allowances over and above normal payments for Sunday hours are included in overtime premium. In chemical manufacture, overtime premium has been calculated by the Department from the information supplied by employers.

Timeworkers and payment-by-results workers—Under "timeworkers" are included both workers paid at time rates only, and those paid at time rates with additional payments based on good time-keeping, merit-rating, profitsharing and co-partnership schemes: in the engineering industries and chemical manufacture, lieu workers, in other words, workers receiving compensatory payments in lieu of payments-by-results are also included as "timeworkers".

Under "payment-by-results workers" are included workers paid under piece-work arrangements, output bonus schemes or any payment schemes which vary according to the output of individuals, groups or departments: contract and lieu workers in shipbuilding and ship-repairing are also included as "payment-by-results workers". Workers employed during the specified pay-week both on timework and on payment-by-results are included as "payment-byresults workers".

Skilled, semi-skilled and unskilled workers-Under "skilled workers" are included workers who have served an apprenticeship or received equivalent training. Under "labourers" are included those men doing unskilled labouring work (in chemical manufacture, craftsmen's labourers are included among general labourers). "Semi-skilled workers" comprise all other workers who are engaged on work which cannot be regarded as purely unskilled labouring work and for which in consequence, rates in excess of the labourer's rate are paid.

Overtime—Hours in excess of the normal working week in the industry which are not paid for at premium rates have not been treated as overtime hours.

Racial discrimination at work

Analyses of applications to industrial tribunals

Information is now available on the outcome of applications to industrial tribunals under the Race Relations Act, 1976, covering cases completed during the period from June 13, 1977, when the Act came into force, to June 30,

The Race Relations Act 1976 makes discrimination on the grounds of race, colour, nationality (including citizenship) or ethnic or national origins unlawful in employment, training and related matters, in education, in the provision of goods, facilities and services to the public. The Act gives individuals the right to direct access to the courts or, in employment, training and related cases, to industrial tribunals. (A more detailed article on the Act was published in Employment Gazette in May 1977.)

Under the Act there is provision for conciliation. A copy of each application is sent to a conciliation officer of the Advisory, Conciliation and Arbitration Service (ACAS). The conciliation officer has a duty to try to promote a settlement of a complaint without the need for a tribunal

At the conclusion of each case, that is after it has been settled at a tribunal hearing or by agreement without recourse to a tribunal hearing or withdrawn for other reasons, statistical returns are completed by the Advisory, Conciliation and Arbitration Service (ACAS).

Over the period June 13, 1977 to June 30, 1978 action was completed in respect of 146 applications to industrial tribunals in relation to complaints arising under the employment provisions of the Race Relations Act 1976.

Discrimination is defined in the Act to include firstly "direct" racial discrimination, that is, the less favourable treatment of a person, on the grounds of his or her colour, race, nationality, or ethnic or national origins, than someone else would be treated (this includes segregation). Second "indirect" discrimination, that is, the application of conditions or requirements which although applied equally to all racial groups are nevertheless discriminatory

Table 1 Applications analysed by type of discrimination and by sex of applicant

30 30	Males	Females	Total	%
Direct	73	30	103	70.6
Segregation	1	AND SOME	1	0.7
Indirect	24	7	31	21.2
Victimisation	8	3	,11	7.5
Total	106	40	146	100-0

in their effect on a particular racial group and which cannot be justified and, thirdly, the victimisation of a person who, for example, has asserted his or her rights under the Act. Table 1 shows that while alleged direct racial discrimination is the main reason for complaint in the cases completed, one in five complaints were about "indirect" discrimination -a new provision introduced in the 1976 Act.

Table 2 Applicants analysed by age and sex of applicant

	Males	Females	Total	%
Under 18	2	1	3	2.1

Wales	2	1	3	2.1
Scotland	-	-	-	
Total	106	40	146	100-0

Analysis of the applications by the age and sex of the applicant shows that six in every ten applicants were aged under 45 (one in six was aged under 25) and that nearly three-quarters of the applicants were men (table 2). Over three quarters of all applications were made in the South East and the Midlands (table 3).

In table 4 the occupations of the applicants, or in cases of complaints about recruitment, the job applied for, have been analysed by the 18 major groups of the Department of Employment's Occupational Classification (CODOT).

The coverage of the employment provisions includes discrimination by employers, by employment agencies, by certain vocational training bodies, by trade unions and employers' associations and by bodies granting licences or other qualifications which facilitate the carrying on of a particular trade or occupation. As table 5 shows nearly all

In table 6, complaints against employers are analysed by the size of the firms involved.

In table 7 the industry of respondents has been analysed by the industry orders of the Standard Industrial Classification 1968.

Table 8 shows that just over a half of all applications were cleared without the need for a tribunal hearing and that nearly a third of all applications resulted in a conciliated or private settlement, or the complaint being upheld at the tribunal.

Table 9 analyses applications by the amount of compensation agreed at conciliation or awarded by a tribunal.

^{*} Comprising Minimum List Headings in the Standard Industrial Classification 1968 as follows:

All engineering industries covered: 331–349; 361; 363–369; 370·2; 380–385; 390–391; 393; 399.

Shipbuilding and ship repairing: 370·1.

Chemical manufacture: 271–273; 276–278.

Mechanical engineering: 331–349; 390.

Electrical engineering: 361; 363–369.

Motor vehicle manufacturing: 380–382.

Aerospace equipment manufacturing and repairing: 383.

Marine engineering: 370·2.
† Includes pieceworkers, contract workers and lieu workers.
‡ Includes lieu workers.
§ Where no figure is given, it is because either it would reveal the earnings in a particular firm or the numbers of workers covered by the returns is too small to provide a satisfactory basis for a general average.

|| Numbers covered by the survey after grossing up for sampling fractions.
|| Payment-by-results workers in shipbuilding and ship-repairing include pieceworkers, contract workers and lieu workers.
** The corresponding figure for June 1977 in the October 1977 Gazette should have been "£70·78" and not "£7·78".

Employment topics

Micro-electronics

A micro-processor controlled mail delivery system that rolls silently around the office stopping at pre-set points to pick up and deliver mail; an electronic decision making machine that weights peoples' votes on issues and displays the result on a screen; home computers that talk amiably about themselves and the things they can do-"I do like a game of chess from time to time"-these were some of the new products seen by Jonathan Sleigh and Brian Boatwright from the Department of Employment's Manpower study group on microelectronics when they recently visited the WESCON Exhibition in Los Angeles.

The Study Group is now engaged upon its task of examining the potential manpower effects of micro-electronic technology, and the Los Angeles exhibition provided an excellent opportunity to see some of the latest developments that are likely to be making their impact in Britain in the next few years.

The exhibition contained (or rather did not contain) one surprise. Much comment on the micro-electronics revolution has assumed that some of the earliest and most dramatic effects of the new technology will be upon the production line, yet virtually no production line applications of micro processors were on display. Nor was this an accidental omission; the Americans are really not much further ahead then anyone else in the application of microprocessors to production. The weight of exhibits of potential industrial application were in the fields of instrumentation, control. and testing and monitoring. All of these devices are primarily aimed at an industrial market, but their impact is likely to be towards improving quality and lowering costs rather than reduc-

The team went on from the exhibition to visit a number of the electronics manufacturing companies in the Santa Clara Valley (now almost universally

known as Silicon Valley) which is just south of San Francisco. The firms visited included Intel, Siliconix, National Semiconductor, Monolithic Memories and Micro-Data Systems. The team's purpose was to pursue further the question of the kind's of micro-processor applications. including especially those with employment implications, that American manufacturers expect to see in the next five to

Most striking about the res-

ponse was that it was virtually the same from everyone to whom the team put their questions. The American's simply do not understand why the British (or Europeans in general) are so worried about potential job loss through wider application of micro-electronic technology. As seen from the inevitably slightly biased perspective of Silicon Valley the technology is more likely to create more employment through the new products, new services and the new wealth that it will create than it is to destroy employment; this has certainly been the experience in California so far.

It was acknowledged that there are likely to be difficult areas, and that the labour force of the future will have to be a great deal more flexible and adaptable than is the present day labour force. It was stressed that the high level of general education that prevails in California makes such adaptation relatively easier, but that it is the level of general education that matters rather than that everyone in the labour force of the future will need electronics and programming skills.

Another talking point that emerged over and over again was the NEB's INMOS venture which interests the Americans very strongly. Several of the manufacturers with whom discussions were held already have or plan to have production facilities in Europe and they are understandably not over anxious that Europeans should supply their own markets.

One interesting sideline on so conspicuous a piece of fast and concentrated industrial development as Silicon Valley is the labour market distortions it creates. The team was told that a newly graduated electronics engineer without any industrial experience can expect to be offered about \$32,000 per annum plus fringe benefits worth a few thousand more dollars, plus a stock option in the company. He is likely to get such offers from several Silicon Valley companies, and can therefore play them off against each other if he chooses. Every time there is another escalatory round of such bargaining the companies have to remember also to adjust upwards the salaries of their existing engineers if they are not to lose them all to rivals.

Firms are, however, beginning to realise that this sort of thing cannot go on forever, and amongst the options they are considering are recruiting and training up more lower level technicians; getting out of the Valley (where property values and salaries are high) and setting up somewhere else; and (more ominously) raiding Europe more systematically in order to recruit engineers.

The team could not but be impressed by the heady air of confidence, optimism and enterprise which pervades Silicon Valley. Optimism about the overall effects of micro-electronic technology upon jobs is, of course, easier to achieve in an area that is conspicuously seizing the employment creating opportunities of a fast advancing technology and the new products that it makes possible.

Union recognition

Between February 1, 1976 and the end of August 1978 a total of 1.245 references under section 11 of the Employment Protection Act were made to the Advisory Conciliation and Arbitration Service (ACAS). This is the section which enables an independent trade union to seek ACAS involvement on a recognition issue.

Of these references, 636 were either settled through conciliation or withdrawn. In addition 142 final reports covering 154 references were published by ACAS. By the end of August 455

cases were still in progress and unsettled. In some cases conciliation was still proceeding or an opinion survey was being undertaken. In some other cases a draft report was being considered by the parties concerned.

In the first eight months of 1978, ACAS had received 2,261 requests for conciliation in industrial disputes, compared with 2,197 for the corresponding period last year.

Training

A trial sponsorship scheme initiated by the Paper and Paper **Products Industry Training Board** has proved so successful that it is to be continued for a second

Early in 1976 the Board became concerned that the numbers of technically qualified people in the industry now and in the future might not be sufficient to ensure continuing levels of expertise and new ideas during the next few decades.

A pilot programme of sponsorships for selected trainees undertaking three specific academic courses was devised. They were the BSc in Papermaking Science at Manchester University's Institute of Science and Technology (UMIST); the BSc in Packaging Technology at Watford College; and the City and Guilds course in Paper Technology at Robert Gordon's Institute of Technology in Aber-

The idea was to bring together trainees, employers, colleges and the training board to ensure the continuity of the courses and at the same time developing close links with all concerned so that the education and incompany training content could develop together

Seven students for UMIST, six for Watford and 15 for Aberdeen were recruited in the first year and the Board has decided to carry on the sponsorship for a second entry this year.

The Board watches the progress of each student and makes regular visits both to companies and to colleges.

Special exemption orders, August 1978

The Factories Act 1961 and related legislation restrict the hours which women and young people (aged under 18) may work in factories. Section 117 of the Factories Act 1961 enables the Health and Safety Executive, subject to certain conditions to grant exemptions from these restrictions for women and for young people aged 16 and 17. by making special exemption

orders in respect of employment in particular factories. Orders are valid for a maximum of one year, although exemptions may be continued by further orders granted in response to renewed applications. The number of women and young people covered by special exemption orders current on August 31, 1978, according to the type of exemption granted were:

Type of exemption	Females (18 years and over)	Young pe and 17	ople aged 16	Total
		Males	Females	
Extended hours †	21,643	1,304	1.672	24,619
Double day shifts‡	36,812	3,398	2,870	43,080
Long spells	10,888	400	1,426	12,714
Night shifts	69,045	2,336	384	71.765
Part-time work§	14,564	151	254	14,969
Saturday afternoon work	4,563	358	256	5,177
Sunday work	53,847	1,432	1,928	57,207
Miscellaneous	6,505	363	191	7,059
Total	217,867	9,742	8,981	236,590

*The numbers shown are those stated by employers in their applications. The actual numbers of workers employed on conditions permitted by the orders may, however, vary during the period of validity of the orders.

f"Extended hours" are those worked in excess of the limitations imposed by the Factories Act for daily hours or overtime.

‡Includes 18,578 people employed on shift systems involving work on Sundays, or on Saturday afternoons, but not included under those headings.

§Part-time work outside the hours of employment allowed by the Factories Act.

Graduates in industry

Forecasts of the numbers of graduates likely to qualify beyond 1980 are difficult to make since most of them have yet to start their degree courses. The only thing that is certain is that the number of 18-year olds will start to decline after 1982, although the number of those graduating will depend on the numbers qualified for higher education who opt for degree courses and on the numbers who, having done so, still fall by the wayside.

With the potential student numbers in the next decade being in some doubt, it is not surprising that forecasts contained in a recent discussion document from the Association of Graduate Careers Advisory Services are rather cautious in predicting the likely state of the highly qualified labour market beyond 1980.

The authors of the report say that in seeking to make predictions they are very conscious of how rapidly the situation facing graduates can change. Not only because graduate employment prospects depend on the state of the economy but also because changes in government spending policies can have a dramatic effect too.

Although the report is principally concerned with predictions of graduate output in the more foreseeable future up to 1980, it ventures some cautious observations on the possibilities be-

yond, based on experience to date. It points out that in 1978 the demand for graduates by employers increased considerably for the second year running and the expected unemployment figure for graduates at the end of the year will be close to five per cent of the proportion of those whose destinations are known, compared with over six per cent in 1976. The increased uptake has come in the main from industry and commerce but there has been some increase in recruitment by the public sector.

Certain types of engineers, particularly electronic, chemical and mechanical have been in short supply this year, causing industry to recruit from other disciplines such as physicists. Numerate graduates generally have been in demand for jobs in computing, finance and sales.

Many graduates, too, now regard working in industry as worth while.

The report says that there is some evidence that employers in the private sector have learned from their experiences of the early 1970s, when after a sudden reduction in graduate recruitment, they found that in subsequent years it was not easy to attract the additional numbers required.

While much has been said about the difficulties facing those wishing to take up teaching, graduates are having

visions of the Sex Discrimina-

Equal pay and sex discrimination

During the first half of 1978 action was completed in respect of 203 applications to industrial tribunals under the Equal Pay Act, including 23 applications made by men. Of these 149 were cleared without a tribunal hearing. They comprised 25 conciliated settlements, 27 cases withdrawn because of private settlements and 97 cases where the applicant withdrew without giving a reason but which are likely to have included further private settlements and cases where the applicant found the complaint to be out of scope. Of the 54 cases heard by tribunals, 20 applications were upheld and 34 were dismissed.

Under the employment pro-

tion Act, 97 cases were completed in the first six months of the year. These included 25 applications made by men. Over the period 55 cases were cleared without a tribunal hearing. Of these conciliated settlements were reached in 16 cases. Two applications were withdrawn because of private settlements, and 37 were withdrawn by the applicant without giving a reason. These cases would have included further private settlements and cases where the applicant found the complaint to be out of scope. Of the 42 cases heard by tribunals, six applications were upheld and 36 dismissed.

Do you have vacancies for young people?

You could find just the people you need through the Careers Service.

As an employer, you know the problems of recruiting young people to suit your needs. It can be time-consuming and costly. Fortunately, professional help could be, literally, just around the corner. Simply call your local Careers Service office.

Our staff know a good deal about the abilities of local school leavers who are looking for jobs. In fact, we were in contact with many of them before they even left school.

With our experience and specialised skills, we can use

this knowledge to identify the most suitable candidates. Which means you only

have to spend a little time selecting from a short list.

As well as saving time, you could also save money. You see, there's no fee for this service.

Incidentally, being part of the local education authority, we can also advise you on academic standards, apprenticeship schemes, day release and other further education, as well as on Government schemes to help unemployed youngsters. So get the help of our experienced professional staff in filling vacancies for young people. Call your local Careers

Service office. Or fill in the coupon.

Monthly Statistics

Summary

Employment in production industries

The estimated total number of employees in employment in industries covered by the index of industrial production in Great Britain at mid-August 1978 was 9,093,000 (6,801,300 males and 2,291,000 females). The total included 7,191,400 (5,084,600 males and 2,106,800 females) in manufacturing industries, and 1,222,500 (1,120,600 males and 101,900 females) in construction. The total in these production industries was 5,700 lower than that for July 1978 and 66,600 lower than in August 1977. The total in manufacturing industries was 2,400 lower than in July 1978 and 49,300 lower than in August 1977. The number in construction was the same as in July 1978 and 12,400 lower than in August 1977. The seasonally adjusted index for the production industries av 1970 = 100) was 88.4 (88.7 at mid-July) and for manufacturing industries 87.6 (87.9 at mid-July).

Unemployment

The number of unemployed, excluding school leavers in Great Britain on September 14, 1978 was 1,316,045. After adjustment for normal seasonal variations, the number was 1,316,800, representing 5.6 per cent of all employees, compared with 1,330,900 in August, 1978. In addition, there were 130,663 unemployed school-leavers so that the total number unemployed was 1,446,708, a fall of 87,733 since August 1978. This total represents 6.2 per cent of all employees. Of the number unemployed in September 1978, 219,947 (15.2 per cent) had been on the register for up to four weeks.

The number of vacancies notified to employment offices and remaining unfilled in Great Britain on September 8, 1978 was 231,150; 18,891 higher than on August 4,1978. After adjustment for normal seasonal variations, the number was 217,300, compared with 207,700 in August 1978. The number of vacancies notified to careers offices and remaining unfilled in Great Britain on September 8 was 29,998; 3,306 higher than on August 4, 1978.

Temporarily stopped

The number of temporarily stopped workers registered in order to claim benefits in Great Britain on September 14, 1978 was 8,651, a rise of 4,474 since August 10, 1978.

Overtime and short-time

In the week ended August 12, 1978 the estimated number of operatives working overtime in manufacturing industries was 1,568,100. This is about 30.1 per cent of all operatives. Each operative worked an average of 8.8 hours overtime during the week. The total number of hour of overtime worked, seasonally adjusted, was 14.92 millions (15.72 millions in July). In the same week the estimated number on short-time in these industries was 24,600 or about 0.5 per cent of all operatives, each losing 13.9 hours on average.

Average earnings

In August 1978 the "new series" index of average earnings of employees in all in dustries in Great Britain was 13.8 per cent higher than in August 1977. The seasonally adjusted "older series" index for manufacturing and those other industries covered by the monthly enquiry before 1976 was 332.9 (January 1970 = 100) compared with 332.7 in July 1978 and was 15.7 per cent higher than in August 1977.

Basic rates of wages

At September 30, 1978, the index of basic weekly rates of wages of manual workers was 16.0 per cent higher than at September 30, 1977. This increase reflects that normally negotiated rates for engineering workers remained unchanged between February 1976 and April 1978. The index was 265.6 (July 31, 1972 = 100).

An article on recent movements in these indices was published in the May 1978 Employment Gazette, page 584.

Index of retail prices

The index of retail prices for all items for September 12, 1978 was $200 \cdot 2$ (January 15, 1974 = 100). This represents an increase of 0.4 per cent on August 1978 (199.4) and of 7.8 per cent on September 1977 (185.7).

Stoppages of work

The number of stoppages of work due to industrial disputes in the United Kingdom beginning in September which came to the notice of the Department of Employment was 167, involving approximately 93,600 workers. During the month approximately 114,600 workers were involved in stoppages, including some which had continued from the previous month, and 860,000 working days were lost, including 270,000 lost through stoppages which had continued from the previous month.

Industrial analysis of employees in employment

The table below provides an industrial analysis of employees in employment in Great Britain for industries covered by the Index of Production at mid-August 1978, for the two preceding months and for August 1977.

The term employees in employment includes persons temporarily laid off but still on employers' payrolls and persons unable to work because of short-term sickness. Part-time workers are included and counted as full units.

For manufacturing industries, the returns rendered monthly by employers under the Statistics of Trade Act, 1947 have been used to provide a ratio of change since June 1976. For the remaining industries in the table, estimates of monthly changes have been provided by the nationalised industries and government departments concerned.

¶ From February 1978 there has been a change in the method of estimating the construction figures. For further details see page 511 of the May 1978 issue of Employment Gazette.

Overtime and short-time in manufacturing industries

In the week ended August 12, 1978 it is estimated that the total number of operatives working overtime in manufacturing industries was 1,568,100, or about 30·1 per cent of all operatives, each working 8.8 hours on average.

In the same week, the estimated number on short-time was 24,600 or 0.5 per cent of all operatives, each losing 13.9 hours on average.

The estimates are based on returns from a sample of employers. They are analysed by industry and by region, in the table below.

All figures relate to operatives, that is they exclude administrative, technical and clerical workers. Hours of overtime refer to hours of overtime actually worked in excess of normal hours. The information about short-time relates to that arranged by the employer and does not include that lost because of sickness, holidays or absenteeism. Operatives stood off by an employer for a whole week are assumed to have been on short-time for 40 hours each.

Overtime and short-time worked by operatives in manufacturing industries-Great Britain: week ended August 12, 1978

Notes: Figures in brackets after the industrial headings show the Standard Industrial Classification minimum list numbers of the industries included.

Although the estimates are given in hundreds, this does not imply that they are reliable to that degree of precision. They are shown in this way in order to give as much information as is available about the extent of the change from month to month.

Unemployment on September 14, 1978

The number unemployed, excluding school leavers, in Great Britain on September 14, 1978, was 1,316,045, 7,515 less than on August 10, 1978. The seasonally adjusted figure was 1,316,800 (5.6 per cent of employees). This figure fell by 14,100 between the August and September counts, and rose by an average of 4,000 per month between June and September.

Between August and September the number unemployed fell by 87,733. This change included a fall of 80,218 school leavers.

The proportion of the number unemployed, who on September 14, 1978 had been registered for up to four weeks was 15.2 per cent. The corresponding proportion for August was 16.3 per cent.

^{*} Numbers unemployed expressed as a percentage of the estimated total number of employees (employed and unemployed) at mid-1976. † Included in females.

Area statistics of unemployment

The following table shows the numbers unemployed in the assisted areas, certain local areas and counties, together with their percentage rates of unemployment. The composition of the assisted areas changed from April 14, 1977. A full description of the assisted areas as they were prior to April 14 is given on page 1021 of the November 1974 issue of the Gazette and an article on page 578 of the June 1977 issue of Employment Gazette describes the changes which took effect on April 14. The unemployment rates take account of the review of travel-to-work areas announced on pages 815 to 816 of the July 1978 issue of Employment Gazette.

Note: The denominators used in calculating the percentage rates of unemployment are the mid-1976 estimates of employees (employed and unemployed). The estimates are available on request from the Director of Statistics, Department of Employment Statistics Branch C1 Orphanage Road, Watford WD1 1PJ.

* Figures relate to a group of local employment office areas.

† The composition of the assisted areas as they were prior to April 14, 1977 is shown on page 1021 of the November 1974 issue of Employment Gazette. An article on page 578 of the June 1977 issue of Employment Gazette describes the changes which took effect on April 14. The Livingston and Glenrothes New Towns are Special Development Areas. Unemployment figures are for Employment Office areas which are somewhat larger than the new towns. The percentage rate for North East includes Darlington, Morpeth and Newton Aycliffe which are outside the Special Development Area. The percentage rate for South Wales excludes Newbridge, Cymmer, Maesteg, Pontardawe, Strangynlais, Ammanford and Garnant which are parts of the Newport, Port Talbot, Swansea and Llanelli travel-to-work areas, the majorities of which are outside the Special Development Area. The percentage rate for Exception area, which also includes Kirkcaldy and Burntisland which are not Special Development Areas. The percentage rate for Livingston relates to the Baffaget travel-to-work area, which also includes Rirkcaldy and Burntisland which are not Special Development Areas. The percentage rate for Livingston relates to the Baffaget travel-to-work area, which also includes Baffaget, Broxburn and West Calder which are not Special Development Areas. The percentage rate for Leven and Special Portice of the Special Development Areas. The percentage rate for Leven and Special Portice of the Special Development Areas. The percentage rate for Leven and Special Development Areas. The percentage rate for Leven and Special Development Areas. The percentage rate for Leven and Special Development Areas. The percentage r

The percentage rate for High Peak relates to the Buxton travel-to-work area and so excludes Glossop which is a small part of the Ashton-under-Lyme travel-to-work area, the remainder of which is not in the High Peak Intermediate Area. The percentage rate for North Midlands excludes Heanor which is in the Nottingham travel-to-work area, the majority of which is outside the Intermediate Area. The percentage rate for North Wales relates to the intermediate area plus part of the Llandudno travel-to-work area outside the designated area. The percentage rate for SE Wales relates to the intermediate area plus parts of the Pontypool and Newport travel-to-work areas outside the designated area.

‡ Travel-to-work areas. See note on page 790 of the August 1975 issue of Employment

§ The number unemployed in Counties are aggregates of figures for employment office areas. Where these straddle county boundaries, they have been allocated to counties on a "best fit" basis. The percentage rates are for the nearest areas which can be expressed in terms of complete travel-to-work areas. Rates calculated from June 1978 onwards take account of the review of travel-to-work areas—see pages 815, 816 and 836 of the July 1978 issue of Employment Gazette.

|| A proportion of the unemployed is in a travel-to-work area associated with another county for the purpose of calculating unemployment rate. For this reason a meaningful rate cannot be calculated.

¶ Unemployment rates are affected by changes in the employment estimates for Shotton and Chester (see page 816 of the July 1978 issue of Employment Gazette).

Temporarily stopped

The number of temporarily stopped workers claiming benefits in Great Britain on September 14, 1978 was 8,651.

These workers were suspended by their employers on the understanding that they would shortly resume work. They are regarded as still having jobs, and are not included in the unemployment statistics.

Number of temporarily stopped workers claiming benefits on September 14, 1978: regional analysis

Region	Males	Females	Total
South East	1,076	43	1,119
Greater London	40	9	49
East Anglia	139	22	161
South West	429	11	440
West Midlands	701	81	782
East Midlands	745	89	834
Yorkshire and Humberside	342	65	407
North West	228	56	284
North	800	37	837
Wales	135	36	171
Scotland	3,582	34	3,616
Great Britain	8,177	474	8,651

Note: Industrial analyses of these figures are made in respect of February, May, August

Notified vacancies

The number of vacancies notified to employment offices and remaining unfilled in Great Britain on September 8, 1978 was 231,150; 18,891 higher than on August 4, 1978.

The seasonally adjusted figure of notified vacancies at employment offices on September 8, 1978 was 217,300; 9,600 higher than that for August 4, 1978 and 9,200 higher than on May 5,

The number of vacancies notified to careers offices and remaining unfilled on September 8, 1978 was 29,998; 3,306 higher than on August 4, 1978.

The figures represent only the number of vacancies notified to employment offices and careers offices by employers and remaining unfilled on September 8, 1978. It is estimated from a survey carried out in April-June 1977 that vacancies notified to employment offices are about one-third of all vacancies in the country as a whole.

Notified vacancies remaining unfilled on September 8, 1978: regional analysis

Region	At employment offices*	At careers offices*
South East	104,396	16,243
Greater London	55,820	9,745
East Anglia	7,415	1,088
South West	14,560	1,611
West Midlands	14,243	2,817
East Midlands	14,546	1,864
Yorkshire and Humberside	16.255	1,940
North West	18,040	1,673
North	10,981	805
Wales	8,947	676
Scotland	21,767	1,281
Great Britain	231,150	29,998

Note: Industrial analyses of the figures are made in respect of February, May, August

and November.

* Vacancies notified to employment offices include some that are suitable for young persons and those notified to careers offices include some that are suitable for adults. Because of possible duplication the two series should not be added together.

Monthly index of average earnings: new series

New monthly series of indices of average earnings of employees in Great Britain have been introduced, based on average earnings in January 1976 = 100, as described in an explanatory article in the April 1976 issue of the Gazette.

The latest available values of the principal new index, covering virtually the whole economy, are given in the table, together with corresponding indices for the various industry groups (Order groups of the Standard Industrial Classification).

There are three sets of industry groups:

Type A: those for which the indices published in table 127 have been rebased on January 1976, by scaling:

Type B: those for which indices were not available before 1976:

Type C: those for which indices were available before 1976 but with narrower coverage than those now available.

These new figures will be subject to seasonal movements, but it will not be possible to estimate their normal pattern for some years. Consequently, it should not be assumed that month-to-month movements in the new principal index provide a better general indication of the underlying trend in average earnings than movements in the seasonally adjusted index given in table 127 and the new table 129 relating mainly to the production industries. The complete series from January 1976 of the whole economy index is also given in table

Table 127 continues to give indices for type A and C industry groups on an unchanged basis (January 1970 = 100 and coverage as in 1970): it also includes, in both unadjusted and seasonally adjusted forms, indices for all manufacturing industries and for all industries covered by the monthly inquiries before their recent extension.

* Provisional. † England and Wales only.

Monthly index of wages and salaries per unit of output

This series was introduced in an article on page 360 of the April 1971 issue of Employment Gazette.

The most recent figures available are contained in the table

below. Quarterly averages of the monthly figures in the series are presented in line 3d of table 134 in the statistical series section of Employment Gazette, page 1244.

Index of wages and salaries per unit of output in manufacturing industries

1975 - 100

Year January	February	March	April	May	June	July	August	September	October	November	December
1970 48-0 1971 54-1 1972 56-7 1973 58-0 1974 66-5 1975 89-5 1976 110-2 1978 134-9	48·6 55·0 * 58·4 67·5 90·9 110·5 119·8 135·9	48·9 55·3 57·6 59·2 67·9 93·4 110·9 121·5 137·7	49·4 55·2 57·6 59·8 69·9 96·4 111·1 122·9 139·4	50·0 54·8 57·6 60·3 71·2 98·1 112·0 124·7 140·8	50·6 55·2 57·8 60·5 73·8 100·3 113·0 124·7 141·2	51·2 55·6 58·2 60·9 75·5 102·2 114·8 125·3	51·7 56·0 58·6 61·7 77·9 103·9 115·2 124·8	52·1 56·4 58·6 62·4 80·3 104·9 115·7 126·5	52-5 56-6 58-6 63-4 83-2 105-1 115-7 128-9	53·0 56·4 58·2 64·5 86·4 107·2 117·2 131·7	53·5 56·5 57·9 65·7 88·1 108·8 118·2 133·5

^{*} In the absence of earnings data for February 1972 due to the effects of the coalmining dispute, no index of wages and salaries per unit of output has been calculated for that month. The indices calculated for January and March 1972 are less reliable than usual.

Basic rates of wages and normal hours of work-manual workers

The statistical tables in this article relate to changes in basic rates of wages or minimum entitlements and reductions in normal weekly hours, where these are the outcome of centrally determined arrangements, usually national collective agreements or statutory wages orders. In general, no account is taken of changes determined by local negotiations, for example at district, establishment or shop floor level. The figures do not, therefore, necessarily imply a corresponding change in the local rates or actual earnings of those who are being paid at rates above the basic or minimum rates. The figures are provisional and relate to full-time manual workers only.

Indices

At September 30, 1978, the indices of weekly rates of wages, of normal weekly hours and of hourly rates of wages for all workers, compared with the previous five months, were:

ALL INDUSTRIES AND SERVICES

Date	Indices J	uly 31, 1972 =	Percentage increase over previous 12 months		
	Basic weekly rates	Normal weekly hours	Basic hourly rates	Basic weekly rates	Basic hourly rates

September 30	265-6	99.4	267-2	16.0	16.1

Notes: 1. The full index numbers and explanatory notes are given in table 131.

2. Details of the representative industries and services for which changes are taken into account and the method of calculation are given in the issues of the Gazette for February 1957, September 1957, April 1958, February 1959, September 1972 and May 1978.

3. As explained in articles in the May 1977 issue (page 463) and May 1978 issue (page 584) of Employment Gazette, movements in the indices have been influenced considerably by nationally-negotiated rates of wages for engineering workers remaining unchanged between February 1976 and April 1978.

Principal changes reported in September

Brief details of the principal changes, with operative dates, are:

Bacon curing—Great Britain—Increases in basic rates of £2 or £1.90 a week, according to grade, for adult workers. Juveniles receive proportional amounts. Minimum earnings levels increased by £5.90 a week for all grades (Pay week containing August 14).

Brass and copper rolling and casting—West Midlands—Increases in minimum rates of £15 a week for skilled workers, of amounts ranging from £11.92 to £12.21 for semi-skilled, of £9.40 for unskilled. Young workers receive proportional amounts (April 10 or on domestic anniversaries where these fall after April 10, 1978).

Cement manufacture—United Kingdom—Introduction of a further weekly pay supplement of 10 per cent of total earnings for all adult workers (other than maintenance craftsmen) 18 and over (previously 21)(May 1).

Road haulage contracting (British Road Services)—Great Britain—Consolidation of previous supplements, together with an increase in basic 40 hour rates of £2 a week (November 21, 1977). Increases of £2.50 a week for adult workers, following arbitration. Young workers receive proportional amounts (April 1, 1978).

Government Industrial establishments—United Kingdom—Consolidation of previous pay supplements into basic rates and an increase of 9 per cent on the consolidated rates. Apprentices and juveniles receive proportional amounts. Craft allowances and charge pay increased by 50 per cent (Pay week including July 1).

Full details of changes reported during the month are given in the separate publication Changes in Rates of Wages and Hours of Work.

The changes in monetary amounts represent the increase in basic full-time weekly rates of wages or minimum entitlements only, based on the normal working week, that is excluding short-time or overtime.

Estimates of the changes reported in September indicate that the basic weekly rates of wages or minimum entitlements of some 260,000 workers were increased by a total of £1,220,000, but as stated earlier, this does not necessarily imply a corresponding change in "market" rates or actual earnings. For these purposes any general increases are regarded as increases in basic or minimum rates. The total estimates referred to above include figures relating to those changes which were reported in September with operative effect from earlier months (245,000 workers and £1,155,000 in weekly rates of wages). Of the total increase of

£1,220,000 about £970,000 resulted from arrangements made by joint industrial councils or similar bodies established by voluntary agreement, £245,000 from direct negotiations between employers' associations and trade unions and £5,000 from statutory wages orders.

Analysis of aggregate changes

The following tables show (a) the cumulative effect of the changes, by industry group and in total, during the period January to September 1978, with the total figures for the corresponding period in the previous year entered below, and (b) the month by month effect of the changes over the most recent period of 13 months. In the columns showing the numbers of workers affected, those concerned in two or more changes in any period are counted only once.

Retail prices, September 12, 1978

The index of retail prices for all items on September 12, 1978 was 200.2 (January 15, 1974 = 100). This represents an increase of 0.4 per cent on August 1978 (199.4) and of 7.8 per cent on September 1977 (185.7). The index for September 1978 was published on October 13, 1978.

The rise in the index during the month was the result of increases in the prices of cars, some articles of clothing and footwear, and many small increases over a wide range of nonseasonal foods, household goods and services. These increases were partially offset by lower prices for seasonal foods, particularly fresh fruits.

Table 1 Recent movements in the all-items index and in the index excluding seasonal foods:

June	197-2	+0.8	+4.7	+ 7.4	197-2	+0.6	+4:3	
July	198-1	+0.5	+4.5	+ 7.8	198-7	+0.8	+4.5	
August	199-4	+0.7	+4.6	+ 8.0	200.4	+0.9	+4.7	
September	200.2	+0.4	+4.4	+ 7.8	201.4	+0.5	+4.7	

The principal changes in the groups in the month were:

Food: The food index, at 206·3, showed little change from the August figure of 206·2, reductions in the prices of seasonal foods, particularly of some fruits, some vegetables and eggs, offsetting increases in the prices of meat, sweets and chocolates, butter, fish and sugar. The index for foods whose prices show significant seasonal variations fell by rather more than $2\frac{1}{2}$ per cent to 173·1 compared with 177·9 in August.

Tobacco: The index for tobacco rose by one per cent to 229.2, compared with 227.0 in August. There were increases in the prices of several brands of cigarettes and tobacco.

Clothing and tootwear: With the ending of the summer sales, the prices of some

articles of women's outer clothing and footwear rose, causing the group index to rise by almost one per cent to 174·0, compared with 172·5 in August.

Transport and vehicles: Increases in the prices of cars and in some provincial bus dares caused the group index to rise by about one half of one per cent to 210.8, compared with 209.6 in August.

Miscellaneous goods: The group index rose by about one half of one per cent to 210·3, compared with 209·0 in August, mainly as a result of increases in the prices of some sports and travel goods, newspapers and periodicals.

Services: Increases in the charges for entertainments and for personal services, caused the group index to rise by almost one per cent to 194.2, compared with 192.4 in August,

Average retail prices of items of food

Average retail prices on September 12, 1978 for a number of important items of food, derived from prices collected for the purposes of the General Index of Retail Prices in more than 200 areas in the United Kingdom, are given below.

Many of the items vary in quality from retailer to retailer, and partly because of these differences there are considerable variations in prices charged for many items.

An indication of these variations is given in the last column of the following table, which shows the ranges

of prices within which at least four-fifths of the recorded prices fell.

The average prices given below have been calculated in accordance with the new stratification scheme described in the article "Technical improvements in the Retail Prices Index" on page 148 of the February 1978 issue of Employment Gazette.

The average prices are subject to sampling error, and some indication of the potential size of this error was given on page 227 of the February 1978 issue of Employment Gazette.

Stoppages of work

The official series of statistics of stoppages of work due to industrial disputes in the United Kingdom relates to disputes connected with terms and conditions of employment. Stoppages involving fewer than 10 workers or lasting less than one day are excluded except where the aggregate of working days lost exceeded 100. Workers involved are those directly involved and indirectly involved (thrown out of work although not parties to the disputes) at the establishments where the disputes occurred. The number of working days lost is the aggregate of days lost by workers both directly and indirectly involved (as defined). It follows that the statistics do not reflect repercussions elsewhere, that is, at establishments other than those at which the disputes occurred. For example, the statistics exclude persons laid off and working days lost at such establishments through shortages of material caused by the stoppages included in the statistics. More information about definitions and qualifications is given in a report on the statistics for the year 1977 on pages 690 to 699 of the June 1978 issue of Employment

The number of stoppages beginning in September* which came to the notice of the department, was 167. In addition, 52 stoppages which began before September were still in progress at the beginning of the month.

The approximate number of workers involved at the establishments where these stoppages occurred is estimated at 114,600 consisting of 93,600 involved in stoppages which began in September and 21,000 involved in stoppages which had continued from the previous month. The latter figure includes 3,100 workers involved for the first time in September in stoppages which began in earlier months. Of the 93,600 workers involved in stoppages which began in September 87,300 were directly involved and 6,300 indirectly involved.

The aggregate of 860,000 workings days lost in September includes 270,000 days lost through stoppages which had continued from the previous month.

Prominent stoppages of work during September

Production at car manufacturer's plants in the North West and South, was halted on September 21 and in the South East on September 22 after workers walked out over the company's decision to conform with the Government's pay guidelines of 5 per cent. The action spread to other plants of the company and within a few days all 23 were affected and over 55,000 workers were involved. The stoppage was still in progress at the end of

A seven week stoppage of work by 50 maintenance fitters at a Midlands engineering works, ended on September 26, 650 production workers had been laid off as a result of the dispute. in which the fitters walked out over a long standing claim for differentials, which the company stated it would not be able to meet, due to Government's pay guidelines. Work was resumed on acceptances of a satisfactory offer.

A work-to-rule by vulcanizers and final inspectors at a Midlands rubber factory, in support of a claim for payment for doing additional work covering vacancies, resulted in a number of lay offs. On September 11 when two men were dismissed for refusing to transfer, 340 inspectors stopped work demanding reinstatement. Eight hundred production workers had been progressively laid off by the end of the month, when the stoppage was still in progress.

^{*} The figures for the month under review are provisional and subject to revision, normally upwards, to take account of additional or revised information received after going to press; continuous revision is reflected in figures for earlier months in the current year included in the cumulative totals on this page and in table 133 on page 1242 of Employment Gazette. The figures have been rounded to the nearest 100 workers and 1,000 working days; in the tables the sums of the constituent items may not, therefore, agree with the scale shows.

Statistical series

Tables 101-134 in this section of the Gazette give the principal statistics compiled regularly by the department in the form of time series, including the latest available figures together with comparable figures for preceding dates and years.

They are arranged in subject groups, covering the working population, employment, unemployment, unfilled vacancies, hours worked, earnings, wage rates and hours of work, retail prices and stoppages of work resulting from industrial disputes. Some of the main series are shown as charts. Brief definitions of the terms used are at the end of this section.

The national statistics relate either to Great Britain or the United Kingdom, and regional statistics to the standard Regions for Statistical Purposes (see Employment Gazette, June 1974, page 533) which conform generally to the Economic Planning Regions.

Working population. The changing size and composition of the working population of Great Britain at quarterly dates is in table 101, and more detailed analyses of the employment and unemployment figures are in subsequent tables.

Employment. As it is not practicable to estimate short-term changes in the numbers of self-employed persons, the group of employment tables relates only to employees. Monthly estimates are given for broad groups of industries covered by the Index of Industrial Production, and quarterly estimates are now given for other groups (table 103). Quarterly estimates for all industries and services, agriculture, Index of Production industries and service industries are separately analysed by region in table 102.

Unemployment. Tables 104-113 give analyses of the unemployed at the monthly counts. People are included in the counts if they are registered for employment at a local employment or careers office, have no job, and are both capable of and available for work on the count date. The counts include both claimants to unemployment benefit and people not claiming benefit, but they exclude non-claimants who are registered only for part-time work. Adult students seeking temporary employment during a vacation, and severely disabled people who are considered unlikely to obtain work other than under special conditions, are also excluded. The number unemployed is expressed as a percentage of total employees (employed and unemployed) to indicate the incidence of unemployment.

Separate figures are given in the tables for young people under the age of 18 seeking their first employment, who are described as school leavers. The numbers unemployed excluding school leavers are adjusted for seasonal variations. Detailed analysis of the unemployed by region, industry, occupation, age, duration and by entitlement to benefit, are summarised as time series. Also included, is a table of unemployment, total and seasonally adjusted, for selected countries: there are, however, varying methods in the compilation of these statistics.

Temporarily stopped workers who register to claim benefit but have jobs to which they expect to return are not included in the unemployment count, but are counted separately.

Unfilled vacancies. The vacancy statistics shown for the United Kingdom and analysed by regions in table 118 relate to vacancies notified by employers to local employment and careers offices, and which, at the date of the count remain unfilled. They are not a measure of total vacancies. Because of possible duplication the figures for employment offices and careers offices should not be added together. Seasonally adjusted figures at employment offices are given in Table 119.

Hours worked. This group of tables provides additional information about the level of industrial activity. Table 120 gives estimates of overtime and short-time working by operatives in manufacturing industries; table 121 the total hours worked and the average hours worked per operative per week in broad

industry groups in index form. Average weekly hours of employees are included in tables in the following groups.

Earnings and wage rates. Average weekly and hourly earnings and hours of manual workers in the United Kingdom in industry groups covered by the regular (October) enquiries are given in tables 122 and 123; averages for full-time men and women are given by industry group in table 122. Average earnings of all non-manual workers in Great Britain in all industries, and in all manufacturing industries, are shown in table 124 in index form. Table 125 is a comparative table of annual percentage changes in hourly earnings and hourly wage rates of full-time manual workers. New Earnings Survey (April) estimates of average weekly and hourly earnings and weekly hours of various categories of employees in Great Britain are given in table 126. Table 127 shows, by industry group and in index form, average earnings of all employees in Great Britain, derived from a monthly survey; the indices for all manufacturing and all industries covered are also given adjusted for seasonal variations. These seasonally adjusted series are also given in table 129 together with a new (unadjusted) series for the whole economy. Average earnings of full-time manual men in the engineering, shipbuilding and chemical industries are given by occupation in table 128, in index form. Indices of basic weekly and hourly wage rates and normal hours are given by industry group and for all manufacturing and all industries in table 131 (Table 130 has been discontinued.)

Retail prices. Table 132 gives the all-items and broad item group figure for the official General Index of Retail Prices. Quarterly all-items (excluding housing) indices for pensioner households are given in tables 132(a) and 132(b).

Industrial stoppages. Details of the number of stoppages of work due to industrial disputes, the number of workers involved and days lost are in table 133.

Output per head and labour costs. Table 134 provides annual and quarterly indices of output, employment and output per person employed for the whole economy, the Index of Production and manufacturing sectors, and for selected industries where output and employment can be reasonably matched. Annual and quarterly indices of total domestic incomes per unit of output are given for the whole economy, with separate indices for the largest component—wages and salaries. Annual indices of labour costs per unit of output (including all items for which regular data is available) are shown for the whole economy and for selected industries, A full description is given in the Gazette October 1968, pages 810-803.

Conventions. The following standard symbols are used:

not available

nil or negligible (less than half the final digit

not elsewhere specified

UK Standard Industrial Classification (1958 or 1968 edition as indicated)

A line across a column between two consecutive figures indicates that the figure above and below the line have been compiled on a different basis, and are not wholly comparable, or that they relate to different groups for which totals are given in the table.

Where figures have been rounded to the final digit, there may be an apparent slight discrepancy between the sum of the constituent items and the total as shown.

Although figures may be given in unrounded form to facilitate the calculation of percentage changes, rates of change, etc., by users, this does not imply that the figures can be estimated to this degree of precision, and it must be recognised that they may be the subject of sampling and other errors.

vith the totals shown.

† Less than 50 workers or 500 working days.

‡ Some stoppages of work involved workers in more than one industry group, but lave each been counted as only one stoppage in the total for all industries taken together.

§ Includes one stoppage involving "sympathetic" action.

Notes: 1. Approximately 6,000 employees work within the Welsh sector of the Chester employment office area and are included in the figures for North West Region.

* The industries included in the index of Production are Orders II-XXI of the SIC (1968).

\$ The service industries are Orders XXII-XXVII of the SIC (1968).

\$ Figures after June 1976 are provisional.

| Regional indices of employment are not adjusted for seasonal variations.

TABLE 102

From June 1976 the figures for employees in employment in the United Kingdom include a constant component for Northern Ireland.
 From June 1974 the figures for self-employed persons in Northern Ireland are assumed unchanged.
 *Estimates are assumed unchanged until later data become available.
 †Estimates of the registered unemployed are not available for December 1974. The figures for December 1976 were estimated. See footnote to table 104.
 ‡Employment estimates after June 1976 are provisional.

TABLE 103 (continued)

^{9,096} 88-7 7,194 7,197 * The industries included in the Index of Production are Orders II-XXI of the SIC (1968).

[†] These figures cover only a proportion of national and local government employees They exclude those engaged in, for example, building, education and health, which are activities separately identified elsewhere in the classification. They include employees in police forces, fire brigades and other national and local government services which are not activities identified elsewhere. Members of HM Forces are excluded. Comprehensive figures for all employees of local authorities, analysed according to type of service, are published quarterly in Employment Gazette.

‡ Figures after June 1976 are provisional.

§ Excludes private domestic service.

[§] Excludes private domestic service.

|| From February 1978 there has been a change in the method of estimating the conruction figures. For further details see page 511 of the May 1978 issue of Employment

^{*} Percentage rates have been calculated by expressing the total numbers unemployed as percentages of the estimated numbers of employees (employed and unemployed) at the appropriate mid-year. The mid-1976 estimate (23,326,000) has been used to calculate the percentage rates from January 1976 onwards.

† \$ || see footnotes to table 104.

^{*} Percentage rates have been calculated by expressing the total numbers unemployed as percentages of the numbers of employees (employed and unemployed) at the appropriate mid-year. The mid-1976 estimate (23,871,000) has been used to calculate the percentage rates from January 1976 onwards.
† Because of industrial action by some staff in the Department of Employment Group, (a) figures for October and November 1974, for January 1975 and for December 1976 include some estimates: (b) figures for December 1975 onwards, the day of the count was changed from Monday to Thursday. Adjustments to take into account amendments—in respect of the numbers unemployed on the statistical date—notified during the four days following the date of the count were discontinued (see Employment Gazette, September 1975, page 906).
§ In January 1976, unemployment returns from eight employment offices in the West Midlands showed only combined figures for males and females. The male and female figures shown include estimates.

|| The seasonally adjusted series from January 1975 onwards has been calculated as described on page 279 of the March 1978 issue of Employment Gazette.

^{*} Percentage rates have been calculated by expressing the total numbers unemployed as percentages of the following numbers of employees (employed and unemployed) at June 1976: South East 7,555,000. East Anglia 703,000, South West 1,611,000, West Midlands 2,313,000. East Midlands 1,571,000, Yorkshire and Humberside 2,083,000, North 1,359,000, Scotland 2,215,000 and Northern Ireland 546,000. The percentage rates for North West and Wales have been based on employment estimates of 2,837,000 and 1,069,000, respectively, up to May 1978. Following a re-alignment of boundaries described on page 816 of the July 1978 issue of Employment Gazette, the estimates used to calculate rates from June 1978 are 2,831,000 for 1978 are 2,831,000 f

^{*(1)} Detailed analyses of duration of unemployment by age of the unemployed are obtained in January and July of each year in Great Britain and in December and June in Northerr Ireland. The distributions by age in this table for Great Britain (in months other than January and July) and for the United Kingdom are estimated. The figures for the period February 1978 to June 1978 have been revised using the latest detailed analyses for Great Britain and Northern Ireland.

(2) Adult students registered for vacation employment are excluded from this table. They were excluded from detailed analyses of the unemployed from October 1975 onwards and from all unemployment statistics from March 1976. Estimates of the numbers of adult students have been deducted in earlier months.

† The figures in this table for the total unemployment before October 1975 and the corresponding age and duration analyses are not adjusted to take into account amendments—in respect of the numbers unemployed on the statistical date—notified during the four days following the date of the count. For these months the totals in columns 5 and 10 differ slightly from those in tables 104 and 105 in the Gazette. From October 1975 onwards, all adjustments were discontinued and the day of the count was changed from Monday to Thursday.

‡, ¶, see footnotes to table 104.

§ Because of the energy crisis, the detailed information about age and duration was not collected in January, February and March 1974. Northern Ireland was not affected.

^{*} Classified by industry in which last employed. Excludes adult students registered for vacation employment.
† The figures of total unemployment before November 1975 in this table, are adjusted to take into account amendments—in respect of the numbers unemployed on the statistical date—notified on the four days following the date of the count. Subsequent figures, and all the industry figures are not adjusted.
‡ From October 1975 the day of the count of unemployed was changed from Monday to Thursday.
§ The denominator used in calculating the percentage rate is the appropriate mid-year estimate of total employees (employed or unemployed). The latest available, that for mid-1976 has been used to calculate percentage rates from 1976 onwards.

|| The seasonally adjusted series have been calculated as described on page 279 of the March 1978 issue of Employment Gazette.
** Because of industrial action by some staff in the Department of Employment Group, figures are not available for November 1976.

^{*} The figures from December 1975 exclude adult students.
† CODOT (and Key List) group VII except postmen, mail sorters, messengers and their supervisors.
† CODOT (and Key List) groups VIII (Selling occupations) and IX (Security, protective service occupations) except petrol pump and forecourt attendants, roundsmen, van salesmen, security guards, patrolmen, coastguards and bailiffs, etc.
§ Selected occupations in CODOT (and Key List) groups XII to XVI and XVIII.

|| This group includes a wide range of manual occupations with varying degrees of skills.
|| Because of industrial action by some staff in the Department of Employment Group, figures for December 1976 are not available.

	July	28·9	14·5	19·7	15·3	7·5	8·9	4·9	0·3	100·0

Note: The age ranges shown in this table have been revised—see note on page 952 of the August 1978 issue of Employment Gazette.

* Information was not collected in January 1974 because of the energy crisis and in January 1975 because of industrial action at local offices of the Employment Service Agency.

† Adult students are excluded from the figures from January 1976 but are included in the figures for earlier dates. From January 1976 the count was made on a Thursday instead of a Monday.

‡ Before January 1976, the total column differs from the total for Great Britain published in table 105; in this latter table, (a) the number unemployed excludes adult students and (b) the unemployed figures are adjusted before October 1975 to take into account amendments notified during the four days following the date of the count.

* All the figures in this table are unadjusted in respect of amendments notified on the four days following the count.
† Information is not available for January 1975 because of industrial action at local offices of the Employment Service Agency.
‡ From October 1975 onwards the figures exclude adult students. Also from October 1975 the count was made on a Thursday instead of a Monday.
§ Before October 1975, the total column differs from the total for Great Britain published in table 105; in this latter table, (a) the number unemployed excludes adult students and (b) the unemployed figures are adjusted before October 1975 to take into account amendments notified during the four days following the date of the count.

1977	February May	480 426	138 117	561 528	267 254	1,446 1,325

Note: The group "others registered for work" includes those who at the operative date had been unemployed for only a short time and whose claims were still being examined.

Also included are those who are registered for employment but not claiming benefits (e.g. those married women who are not entitled to benefit, some school leavers, some retired people who are again seeking employment, and some people who have been disqualified from receiving unemployment benefit or who have received all the unemployment benefit to which they are entitled in their current spell of unemployment).

* Detailed information for February 1974 was not collected because of an energy crisis.

† Because of industrial action by some staff in the Department of Employment Group, figures for November 1976 are not available.

Notes: 1 It is stressed that the figures are not directly comparable owing to national differences in coverage, concepts of unemployment and methods of compilation (described in an article on pages 710-715 of the July 1976 issue of the Gazette). There are two main methods of collecting unemployment statistics:

(1) by counting registrations for employment at local offices:
(2) by conducting a labour force survey from a sample number of households.

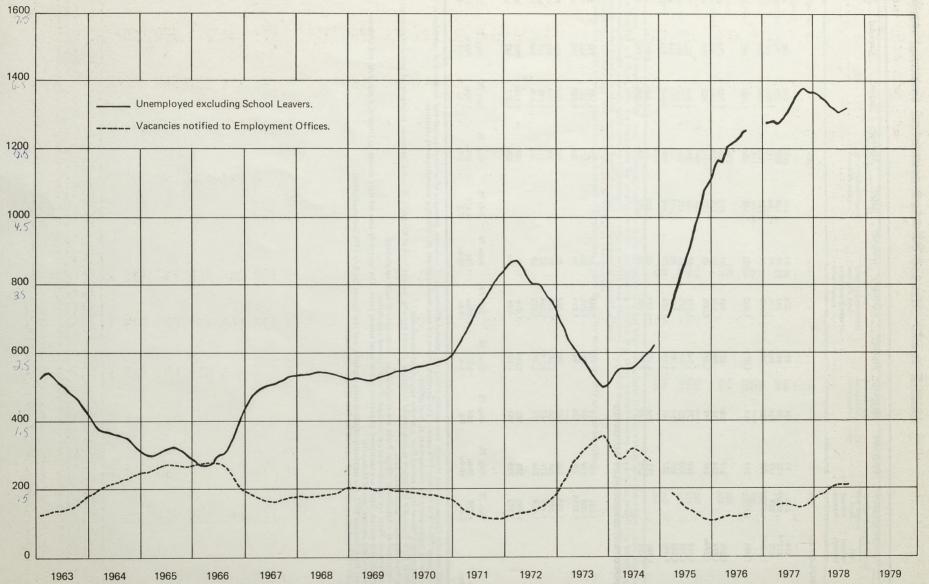

2 Source: OECD Main Economic Indicators supplemented by labour attaché reports except United Kingdom. In some instances estimates of seasonally adjusted levels have been made from the latest unadjusted data.

* Numbers registered at employment offices. Rates are calculated as percentages of total employees.
† Insured unemployed. Rates are calculated as percentages of total insured population.
‡ Labour force sample survey. Rates are calculated as percentages of total labour force. The quarterly data for Italy relates to January, April, July and October.

** The annual averages are averages of 11 months.
†† New survey from January 1977. No seasonally adjusted data available, and the figures for July 1978 are unadjusted.
§ From January 1977 includes unemployed insured for loss of part-time work.
Estimated.

TABLE 113

Unemployed and vacancies: Great Britain

There are gaps in the data due to industrial action. See footnote(t) to table 104.

^{*} The flow statistics are described in the Gazette, September 1976, pp. 976-987. While the coverage of the flow statistics is somewhat different from the published totals of unemployed excluding school leavers, and of vacancies notified to employment offices, the movements in the respective series are closely related.
† Flow figures are collected for 4 or 5 week periods between unemployment or vacancy count dates; the figures in this table are converted to a standard 4½ week month and are seasonally adjusted. The dates shown are the unemployment count dates; the corresponding vacancy count dates are generally 6 days earlier (5 days in the period before October 1975).
‡ The figures prior to June, 1976 have been adjusted on an estimated basis to exclude adult students registering for vacation employment. Subsequent figures exclude adult students,

as collected.

§ From April 1974 the vacancy figures include some that are suitable for young persons.

[Because of industrial action at local offices of the Employment Service Agency figures for the periods November 1974 to March 1975 and November 1976 to March 1977 are not available. The figures for the period September to November 1974 include some estimates.

Notes: The figures represent only the numbers of vacancies notified to employment offices and careers offices by employers and remaining unfilled on the day of the count. It is estimated from a survey carried out in April-June 1977 that vacancies notified to employment offices are about one-third of all vacancies in the country as a whole. Vacancies notified to employment offices could include some that are suitable for young persons. Similarly vacancies notified to careers offices could include some for adults. Because of possible duplication the two series should not be added together.

* Including Greater London.

† Because of industrial action by some staff in the Department of Employment Group, information for Great Britain is not available for November and December 1976 and January 1977.

VACANCIES

Note: The figures relate only to the number of vacancies notified to employment offices and remaining unfilled and include some that are suitable for young persons. In the period before April 1974 the figures relate to vacancies for adults.

* The series for Great Britain, Northern Ireland and United Kingdom from January 1975 onwards have been calculated as described on page 279 of the March 1978 issue of the Gazette. † The boundaries of this region were revised in April 1974. Figures for April 1974 are shown on both the old and the revised basis.

‡ From October 1975 the day of the count was changed from a Wednesday to a Friday.

| Because of industrial action by some staff in the Department of Employment Group. (a) some of the figures for October. November and December 1974 and for February 1975 include estimates for certain offices which did not render returns, (b) in December 1974 no count of unfilled vacancies was made in the South East, East Anglia, West Midlands and East Midlands regions, and (c) figures are not available for January 1975, November and December 1976 and January 1977.

^{*} In June 1974 a new sampling system was introduced for the monthly employment returns (see page 736 of the August 1974 issue of the Gazette). At the same time revisions were made in the method of calculating overtime and short-time. Figures for June 1974 have been calculated on both the old and new basis. Thus, up to and including June 1974 (a) the figures related to operatives at establishments with over 10 employees in all manufacturing industries except shipbuilding and ship-repairing but excluded overtime worked by maintenance workers. The new series from June 1974 (b) relates to all operatives in manufacturing industries including shipbuilding and ship-repairing and overtime worked by maintenance workers is included.

† Operatives stood off for the whole week are assumed to have been on short-time to the extent of 40 hours each.

‡ In January, February and March 1974, the volume of overtime and short-time was affected by an energy crisis.

§ Figures after June 1976 are provisional and are subject to revision to take account of the results of the June 1977 census of employment.

| See page 1194 for detailed analysis.

HOURS OF WORK manufacturing industries: hours worked by operatives: Great Britain

^{*}The index of total weekly hours worked is subject to revision from July 1976 when the results of the June 1977 Census of Employment become available. Both indexes are subject to revision from November 1977 to take account of the October 1978 enquiry into the hours of manual workers and the proportion of operatives to total employees.

Note:
The method of calculation of this index was published on pages 305 to 307 of the August 1962 issue, and on page 404 of the October 1963 issue, respectively, of Employment Gazette.

Note: The table covers full-time workers in the industries included in the department's regular surveys into the earnings and hours of manual workers (table 122).

*The figures in column (3) are calculated by:

1. Assuming that the amount of overtime is equal to the difference between the actual hours worked and the average of normal weekly hours;

2. Multiplying this difference by 1½ (the assumed rate of overtime pay);

3. Adding the resulting figure to the average of normal weekly hours to produce a "standard hours equivalent" of actual hours worked; and

4. Dividing the average weekly earnings by the "standard hours equivalent" which gives a reasonably satisfactory estimate of average hourly earnings exclusive of overtime.

† The figures in this column are based on the hourly wage rates index.

† The engineering and construction industries had large wage rates increases in August 1972 and September 1972, respectively, increases which were not fully reflected in actual earnings by the date of the October 1972 earnings inquiry.

§ The reason for the negative figure is that a flat rate supplement of pay represents a higher proportion of basic wage rates than of earnings.

†† These figures have been affected by nationally negotiated rates of wages for engineering workers remaining unchanged between February 1976 and April 1978.

* England and Wales only.

† Except sea transport and postal services.

† Consisting of laundries and dry cleaning, motor repairers and garages and repair of boots and shoes.

§ Because of disputes in coalmining a reliable index for "mining and quarrying" cannot be calculated for February 1974. The figures for coalmining for a month earlier have been used in the compilation of the index "all industries and services covered".

¶ Provisional.

** Insufficient information is available to enable a reliable index for "agriculture" to be calculated for the current month, but the best possible estimate has been used in the compilation of the index "all industries and services covered".

†† The figures reflect temporary reductions in earnings while three-day working and other restrictions were in operation.

EARNINGS index of average earnings: all employees (monthly inquiry-older series): Great Britain

Note (1): This series is explained in articles in the March 1967, July 1971, May 1975 and February 1977 issues of Employment Gazette. The information collected is the gross remuneration including overtime payments, bonuses, commission, etc. Monthly earnings have been converted into weekly earnings by using the formula:—monthly earnings multiplied by 12 and divided by 52. In arriving at the indices of average earnings the total remuneration is divided by the total number of employees without distinguishing between males and females, adults and juveniles, manual and non-manual employees or between full-time and part-time employees.

Note (2): The seasonal adjustments are based on the data for 1963 to December 1977.

Note (3): A new series, based on January 1976 = 100, has been introduced, including index numbers for the whole economy and 27 industry groups. It is explained in an article in the April 1976 issue of Employment Gazette. The latest figures are given elsewhere in the present issue.

Notes: Figures are given to one decimal place, but this does not imply that the final digit is significant. Figures to two decimal places were used in calculating the percentage changes, and so the percentages may differ from those based on the rounded figures.

The seasonal adjustments (older series) are based on data up to December 1977.

* As industrial activity was severely disrupted by restricted electricty supplies, the monthly survey was not carried out in February 1972. Consequently it is not possible to calculate indices for that month nor percentage increases involving that month. The annual averages of the indices for 1972 are based on data for eleven months—ie. excl. February.

† The figures reflect temporary reductions in earnings while three-day working and other restrictions were in operation.

† These are estimates of the percentage increases in the indices that would have occurred if there had been no reductions in earnings in January and February 1974 as a result of three-day working and other restrictions.

§ In this column, the percentage increases given in the lower part of the table are obtained by simple comparisons of the figures for successive years in the upper part of the table.

¶ Provisional.

Notes: (1) The indices are based on minimum entitlements and normal weekly hours laid down in national collective agreements and statutory wages orders for manual workers in representative industries and services. Minimum entitlements mean basic rates of wages, standard rates, minimum guarantees or minimum earnings levels as the case may be together with any general supplement payable under the agreement or order.

(2) The indices relate to the end of the month. Figures published in previous issues of Employment Gazette have been revised, where necessary, to take account of changes reported subsequently.

subsequency.

(3) Details of the representative industries and services for which changes are taken into account and the method of calculation are given in the February 1957, September 1957, April 1958, February 1959, and September 1972 issues of Employment Gazette.

* The figures given in brackets are the average normal weekly hours at the base date, July 31, 1972.

WAGE RATES AND HOURS

indices of basic weekly and hourly rates of wages and normal weekly hours: all manual workers: United Kingdom

As explained in the May 1978 issue of Employment Gazette (page 584), this series has been discontinued.

The weights within the manufacturing sector were changed from July 1978 when the index for "Other manufacturing industries" was discontinued: The weights are used in compiling the general basic weekly wage rates indices for all manufacturing industries and for all industries and services. Those used for the corresponding indices of hourly rates and hours are slightly different.

Publication of these figures to one decimal place must not be taken to mean that the figures are thought to be significant to more than the nearest whole number.

As explained in articles in the May 1977 (page 463) and May 1978 (page 584) issues of Employment Gazette, movements in these indices were influenced considerably by nationally-negotiated rates of wages for engineering workers remaining unchanged between February 1976 and April 1978.

^{*} The statistics relate to stoppages of work due to disputes connected with terms and conditions of employment. They exclude stoppages involving fewer than ten workers and those which lasted less than one day, except any in which the aggregate number of working days lost exceeded 100. The figures for 1978 are provisional and subject to revision. Figures of stoppages known to have been official are compiled in arrear and this table does not include those for the last three months.

Workers directly and indirectly involved at the establishments where the stoppages occurred. Workers laid off at establishments other than those at which the stoppages eccurred are excluded. Workers involved in stoppages beginning in one month and continuing into later months are counted, in cols. (5) and (6), in the month in which they first time in stoppages which began in an earlier month), and in col. (7), in each month in which they were involved.

Loss of time, for example through shortage of material, which may be caused at other establishments is excluded. The analysis by industry prior to 1970 is based on the Standard Industrial Classification 1968.

Figures exclude workers becoming involved after the end of the year in which the stoppages began.

Figures for stoppages in coal mining, other than for the national stoppage of February 10–March 8, 1974, are not available for December 1973–March 1974.

OUTPUT PER HEAD AND LABOUR COSTS

^{*} Civil employment and HM Forces.

** The quarterly indices for wages and salaries in manufacturing industries are derived from the monthly index, recent values of which are published on page 1200 of this issue.

† Figures shown in brackets are provisional.

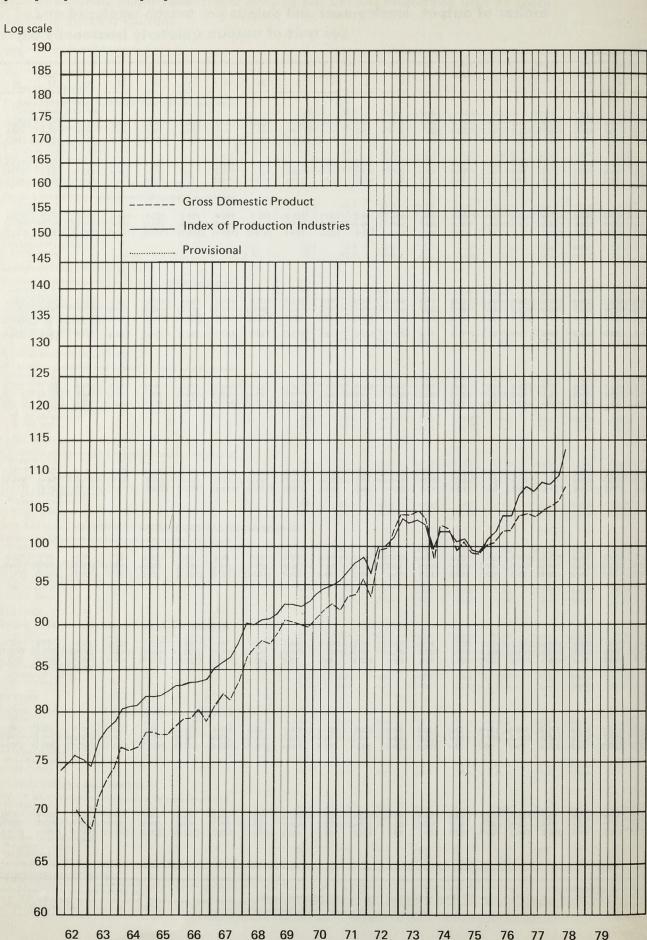

§ As from 1970 the gross domestic product is shown adjusted to allow for the use of delivery rather than production indicators to represent output in certain industries within manufacturing. The industrial production index and the index for manufacturing are still shown unadjusted for this effect.

|| The index of wages and salaries per unit of output in manufacturing industries given here has been scaled to 1970 = 100 for the chart following table 126.

[†] Figures shown are provisional.

Note: The series was introduced in an article on pages 801-806 of the October 1968 issue of Employment Gazette.

Output per person employed

DEFINITIONS

The terms used in these tables are defined more fully elsewhere in articles in Employment Gazette relating to particular statistical series. The following are short general definitions.

WORKING POPULATION

All employed and registered unemployed persons.

Serving, UK members of HM Armed Forces and Women's Services, including those on release leave.

EMPLOYED LABOUR FORCE

Working population less the registered unemployed.

TOTAL IN CIVIL EMPLOYMENT

Employed labour force less HM Forces.

EMPLOYEES IN EMPLOYMENT

Total in civil employment less self-employed.

TOTAL EMPLOYEES

Employees in employment plus the unemployed. (The above terms are explained more fully on pages 207-214 of the May 1966 and pages 5-7 of the January 1973 issues of this Gazette).

UNEMPLOYED

Persons registered for employment at a local employment office or careers service office on the day of the monthly count who on that day have no job and are capable of and available for work. (Certain severely disabled persons, and adult students registered for vacation employment, are excluded).

UNEMPLOYED SCHOOL-LEAVERS

Unemployed persons under 18 years of age who have not entered employment since terminating full-time education.

Persons aged 18 or over who are registered for temporary employment during a current vacation, at the end of which they intend to continue in full-time education. These people are not included in the unemployed.

UNEMPLOYED PERCENTAGE RATE

The unemployed expressed as a percentage of the estimated total number of employees (employed and unemployed) at mid-year.

TEMPORARILY STOPPED

Persons registered at the date of the count who are suspended by their employers on the understanding that they will shortly resume work, and register to claim benefit. These people are not included in the unemployment figures.

A job notified by an employer to a local employment office or careers service office which is unfilled at the date of the monthly count.

SEASONALLY ADJUSTED

Adjusted for normal seasonal variations.

MEN

Males aged 18 years and over, except where otherwise stated.

WOMEN

Females aged 18 years and over.

ADULTS

Men and women.

Males under 18 years of age, except where otherwise stated.

Females under 18 years of age.

YOUNG PERSONS

Boys and girls.

Males aged 18-20 years (used where men means males aged 21 and over).

OPERATIVES

Employees, other than administrative, technical and clerical employees in manufacturing industries.

MANUAL WORKERS

Employees, other than administrative and clerical employees, in industries covered by earnings enquiries.

PART-TIME WORKERS

Persons normally working for not more than 30 hours a week except where otherwise stated.

NORMAL WEEKLY HOURS

Recognised weekly hours fixed in collective agreements, etc.

WEEKLY HOURS WORKED

Actual hours worked during the week.

OVERTIME

Work outside normal hours.

SHORT-TIME WORKING

Arrangements made by an employer for working less than normal hours.

STOPPAGES OF WORK—INDUSTRIAL DISPUTES

Stoppages of work due to disputes connected with terms and conditions of labour, excluding those involving fewer than 10 workers and those which last for less than one day, except any in which the aggregate number of man-days lost exceeded 100.
