**REPRINTS OF ARTICLES** Reprints from the GAZETTE, which should be ordered within one week of publica-tion, cost £3.25 per page (or part) for 125 copies and 40p per page (or part) for each additional 125 copies. Orders and remittances for reprints should be addressed to the Director of Publications (P.12c), Her Majesty's Stationery Office, Atlantic House, Holborn Viaduct, London EC1 1BN. Cheques should be made payable to H.M. Paymaster General.

## **Unemployment and notified** vacancies-flow statistics

An important feature of the registered unemployment statistics is the large number of people joining the register in a month, and the similar large number leaving it, in relation to the total number on the register. The turnover is proportionally even greater for notified vacancies. This article is the third in an annual series giving figures obtained from administrative returns of flows of adults registering as unemployed and of vacancies notified at the local offices of the Employment Service. An article in the September 1973 GAZETTE (pp. 838-848) gave flow statistics of unemployment and vacancies, while the first article in the series in the September 1972 GAZETTE (pp. 791-795) was confined to flows of unemployment.

These articles show how very large the turnover of the unemployment register is: between about 300,000 and 350,000 adults join the register each month and similar numbers leave. Thus the level of unemployment at any count date is a snapshot of a rapidly changing register. A further illustration of the large turnover is that each month during 1973 the number of unemployed who had joined the register within the past 4 weeks varied between 100,000 and 170,000; and the numbers each month who had joined between 4 and 8 weeks ago varied between 50,000 and 100,000. It is also noteworthy how generally small the changes in flows are compared with changes in the level of unemployment. The rise in adult unemployment from 570,000 in June 1970 to nearly 900,000 in early 1972 and the subsequent fall to a little under 500,000 in late 1973, occurred at a time when inflows and outflows of unemployment remained generally in the range of 290,000 to 340,000 per month. The rise and fall were accounted for by relatively small differences between the inflows and outflows. Even when unemployment is high, substantial numbers of people are leaving the register each month.

#### The data

The basic figures obtained are of the numbers of new registrations made for employment at employment offices during each 4 or 5 week period, and the numbers of vacancies filled or cancelled during the period. The registrations for employment include renewals of the registrations of people who had previously registered but who had left the register on finding employment or for other reasons (such as becoming sick). From these figures, together with the count of the stock of unemployment and notified vacancies at the beginning and end of the period, the outflow of unemployment and inflow of vacancies can be calculated.

The statistics of flows are not on precisely the same basis as that for the unemployment and vacancies statistics. The figures relate only to flows through employment offices and thus exclude young people seeking employment through careers offices and the corresponding vacancies. The figures also exclude flows through the Professional and Executive Register. On the other hand, the flows include people seeking part-time work who are not claiming benefit, and who are not included in the regular unemployment counts. Of course, as with the regular vacancy figures, vacancies which are not notified to the Employment Service are not included, nor are unemployed people who choose not to register at an employment office. The figures are collected on a day-to-day basis and are unavoidably subject to greater monthly fluctuations than are the counts of the stock of unemployment and vacancies.

To give a broad picture of the trends in the flows, the basic figures are converted to a standard 41 week month and seasonally adjusted. Since large variations from month to month still remain in the seasonally adjusted figures, two moving averages are calculated for the flows of total adults and total vacancies. One is a simple average of three months and the other a weighted average of 13 months. Where separate figures for men and women are given, only the 13 month moving average has been calculated.

Inspection of the figures shows that flows in March and April are affected by the incidence of Easter. Accordingly, as a rough correction for this, before seasonal adjustment and the calculation of the trend, the flows in these months (i.e. the standard 41 week periods) are averaged together. Columns (3) and (5) of the tables give the raw figures, before this correction is made.

#### Changes in the past year

During the second half of 1973 unemployment fell from 593,000, seasonally adjusted, in June to 470,000 in December and subsequently increased to 561,000 in June 1974. Over the same period, the flow of people on to the unemployment register tended to decline for some months but began to increase at about the turn of the year and rose to a markedly higher level throughout the first half of 1974. At the same time, the outflow of people from the register was declining during the second half of 1973 but (like the inflow) increased markedly in the first half of 1974, though with the rate of outflow remaining somewhat less than the rate of inflow and the level of unemployment therefore tending to rise. Details of these movements are shown in tables 1-3 and figures 1 and 2.

After allowance for normal seasonal movements, vacancies notified to employment offices rose from July to December 1973. There was a sharp fall in January

1974, which continued in the first guarter of the year. but a recovery in the second quarter left the level in July 1974 close to that of July 1973. The inflow and outflow of vacancies remained at high levels in this period, but somewhat below the exceptionally high level

Note: The extra year's unemployment data from July 1973 have produced revisions of the trend figures shown in the September 1973 GAZETTE. The revised unemployment trend figures are shown above. The trend figures for earlier years were published in the September 1972 GAZETTE; revisions to these figures are normally small and never exceed 2,000. They are obtainable on request from the Department of Employment (Stats B2), King Street, London SW1. \* 13-months moving average, obtained by applying the additive series of the US Bureau of the Census X-II to the seasonally adjusted data. † Three-months moving average, which is a simple average of the seasonally adjusted data.

#### SEPTEMBER 1974 DEPARTMENT OF EMPLOYMENT GAZETTE 803

achieved earlier in 1973. During the second half of 1973. both inflow and outflow began to fall from these peak values; but both resumed an upward trend early in 1974, with inflow slightly exceeding outflow. Details are given in tables 4-6 and figures 3 and 4.

## Fig 4 Excess of inflow trend over outflow trend-Vacancies for Adults, Great Britain

## **Protection against radiation**

The National Radiological Protection Board was set up in 1970, with two main functions: to advance the state of knowledge about protection from radiation hazards, by research and other means, and to provide information and advice to industry, hospitals, government departments, international organisations and others concerned with possible radiation risks. Its first complete review\* of its first three years of work was published in September. Some aspects of this work are described below.

In its first three years, the Board's staff have made over 1,700 visits to places with radiation problems, calibrated over 3,500 instruments, tested over 5,500 radioactive sources for leakage, organised 120 training courses and issued over 1.5 million personal dosemeters for measuring radiation doses, for use by people who could have been exposed to radiation above certain limits.

#### **Consumer protection**

Examination of the use, or occurrence, of radioactive materials in consumer products is one important part of the Board's work. It has, for instance, assessed the implications of traces of radioactive material in North Sea gas, where it found no risk to the consumer. On the other hand, it has advised banks not to go ahead with the marking of bank cards with radioactive materials as a guard against forgery; and it has advised some manufacturers against the use of radioactivity to distinguish their products from those of their competitors.

Much of this type of work is concerned with luminous substances, not only in clocks and watches, but on gunsights, compasses, a certain type of telephone kiosk, control panels in lifts, in cameras, fishing floats, pictures, paperweights and in kits for do-it-yourself devices. Makers of luminous objects have now largely stopped using radium-226 and are increasingly using the intrinsically safe gaseous tritium light sources.

#### Medical uses

The medical uses of radiation and radioactivity produce by far the greatest man-made radiation doses. The feasibility of conducting a survey of the doses, particularly the genetically-significant doses, received by patients, is being studied in conjunction with the Department of Health and Social Services. Particular attention is being paid to techniques that have come into prominence since the last survey was conducted some 15 years ago. A dosemeter, based on the use of the thermoluminescent material lithium borate, has been developed specifically for this work.

The Board issues half a million film badges, for measuring individual radiation doses, each year, but it is developing a

\* The work of the NRPB 1970/73, HMSO, £1.00

thermoluminescent dosemeter (TLD), based on lithium fluoride, to replace the film badge for most uses. The service based on the TLD will be automated and linked to a computerised system of dose record keeping.

#### Plutonium

The Board undertakes research in biology and physics. Because of the growing importance of plutonium in the production of energy, understanding its physiology and pathology and developing methods of removing it from the body are of fundamental importance. The report describes the work on the metabolism of plutonium (and also americium and curium), which includes studies on the distribution of plutonium to body tissues after the deposition of various compounds in the lungs of rats, and studies of the pathological changes produced by plutonium in lung cells of animals. The report also describes work on methods of removing plutonium from the body and studies of the detailed biochemistry of plutonium. Arising from this, a new and cheaper method of plutonium bioassay has been developed.

#### Public health

As part of its service to industry, hospitals, universities, etc, the Board gave advice and assistance to, amongst others, owners and local and other authorities, in connection with derelict or occupied premises contaminated with thorium and radium, at one time used for luminising purposes.

It also persuaded manufacturers of X-ray security systems, used at offices and airports to detect explosive devices and firearms, to introduce modifications to provide adequate standards of protection.

A number of radiation incidents were dealt with, including 40 involving industrial radiography equipment, but also including incidents in universities, a warehouse, and a dental surgery.

The effects on public health of radioactive waste were assessed; the British contribution to a United Nations study on the environmental consequences of radioactive waste disposal was prepared in the form of a report on British practice and the associated doses produced. Subsequently, a member of the Board's staff served as consultant to the United Nations Scientific Committee on the Effects of Atomic Radiations for the preparation of their 1972 report. The Board also carried out a major study of the ocean disposal of solid radioactive wastes; the study has been used as the basis of a report to the International Atomic Energy Agency, as a contribution to the latter's task of defining the radioactive wastes considered as unsuitable for dumping at sea under the terms of the London Convention of 1972 on the prevention of marine pollution by the dumping of wastes and other matter.

## **Tom Hudson**

Tom Hudson, creator of this GAZETTE in its present form, and Editor since 1965, retired in August. Jack McIntosh, formerly Chief Information Officer at the Department, contributes this appreciation of Tom and his work.

Tom Hudson first came to the department as a Senior Information Officer in the Press Office in December 1958 at a time when an increasing emphasis was being put on the employment of professionally trained men and women in the information service.

His many years of practical experience in journalism, first in his native Liverpool and the surrounding area, covering sport and general subjects and latterly as a Parliamentary press gallery reporter for THE TIMES, helped him quickly to become a valued member of the press office team. He soon earned the friendship and respect not only of his colleagues in all sections of the Ministry of Labour, as it then was, but also of the labour, industrial and other correspondents.

#### **Highest tradition**

Within a few months he had acquired a useful working knowledge of the history and current policy of the department and his guidance was always accurate and well informed. This knowledge, together with his keen appreciation of the needs of journalists, which earned him the reputation of being a man who never said "no" to any reasonable request, turned Tom Hudson into a press officer worthy of the highest tradition of Whitehall.

It was in 1965 that his big opportunity came. A decision was taken to transform the Ministry of Labour GAZETTE from a purely official record of departmental statistics and reports, virtually unchanged in appearance since the 1890s, into a much more modern, presentable and professional monthly magazine. Hitherto the GAZETTE had been solely the responsibility of the statistics division of the Ministry; contributors were all civil servant specialists in their particular subjects and the editor had no particular training in journalism.

Tom Hudson was chosen to be the first editor of the new GAZETTE and given as his first task the job of remodelling its design and layout on modern lines.

#### Initiative and flair

It was work after his own heart, in which he was able to give rein to his own initiative and flair. He set to with a will to produce a monthly which at the same time would be worthy of the department and yet contain all the essential facts and figures required by economists, statisticians, businessmen and trade unionists. He received the fullest possible co-operation from the designers and printers at HM Stationery Office who were at that time producing the GAZETTE on their presses at Harrow, and after months of preparatory work the new GAZETTE first appeared in May, 1966. It was widely welcomed in its new form, particularly for its clean and attractive appearance and for the straightforward manner in which all the essential information was conveyed. Much of the credit for this was due to Tom Hudson's practical approach and clear thinking.

In 1973 he had to cope with the further complication caused by a change of printer from the Stationery Office press to The Garden City Press, Letchworth.

At the same time as it was decided to revitalise the Ministry of Labour GAZETTE, a new branch of the Ministry's information division was formed to be responsible for all news publications and a series of background information papers on all aspects of the work of the department. Tom Hudson was promoted to take overall charge of this branch.

The staff magazine founded under the name of "Minlabour" in January 1947 to serve as a focal point for the department's staff, widely scattered all round Great Britain (re-christened TEMPO when the Ministry of Labour became the Department of Employment and Productivity), and the clip sheet INFORMATION SERVICE which has been succeeded by the more sophisticated DE NEWS, which has a free circulation of 75,000 copies around factories, trade union branches and people generally interested in labour matters: with both undertakings he was particularly associated.

But it was not only in his professional work that Tom Hudson made his mark on the department. He was himself a keen member of his own trade union, the National Union of Journalists. For many years he was hon. treasurer of the Whitehall branch and he was also a delegate to the Institution of Professional Civil Servants. He took part in a number of departmental social activities and his cheerful outlook and lively sense of humour will be greatly missed in and around St. James's Square.

Jack McIntosh

Student employees are young foreigners who come for employment in industry and commerce in a supernumerary capacity in order to improve their English and widen their occupational experience.

### DISABLED PEOPLE IN GOVERNMENT EMPLOYMENT

The table shows the numbers and percentages of registered disabled people in Government employment on October 1, 1973 in relation to the total numbers of employees, both non-industrial and industrial. Comparable figures for October 1, 1972 are shown in brackets.

Total number of employees	Total number of registered disabled people	Percentage of registered disabled people in total employed
679,142 (672,237)	16,766 (17,451)	2.47 (2.60)

Permits are issued for overseas workers resident abroad. Permissions are given to those already in this country.
 Long term permits or permissions are those issued for the maximum period of 12 months. Short term permits or permissions are those issued for shorter periods and include, for instance, entertainers who come for engagements of short duration.
 Permits and permissions for Commonwealth workers include a small number of UK passport holders who qualify for work permits because of their skill or experience.
 Permits issued are not all taken up by overseas workers. The totals will differ from the Home Office figures also because some work permit holders will arrive in a subsequent operator.

The provisions of the Disabled Persons (Employment) Act 1944 are not binding on the Crown, but the Government has agreed that departments should accept the same responsibilities as other employers.

The figure for government departments compares favourably with the average percentage of registered disabled people employed by all other undertakings having 20 or more employees, which was 2.05 at last year's review.

In addition, and not included in the above totals, 185 of the 205 people employed in designated employment, were registered as disabled. Employment as a car park attendant or as a passenger electric lift attendant is designated employment reserved for registered disabled people under the Act.

## ACCIDENTS AT WORK—SECOND QUARTER 1974

Between April 1 and June 30 this year 65,511 accidents at work, of which 142 were fatal, were notified to HM Factory Inspectorate. These included 55,945 (93 fatal) involving persons engaged in factory processes, 8,281 (44 fatal) to persons engaged on building operations and works of engineering construction, 1,015 (4 fatal) in work at docks, wharves and quays other than shipbuilding, and 270 (1 fatal) in inland warehouses.

Table 1 analyses all fatal and non-fatal accidents according to the division in which they were notified, and table 2 is an analysis of the accidents by process.

An accident occurring in a place subject to the Factories Act is notified to H.M. Factory Inspectorate if it causes either loss of life or disables an employed person for more than three days from earning full wages from the work on which he was employed. For statistical purposes each injury or fatality is recorded as one accident.

Recent annual reports of HM Chief Inspector of Factories have drawn attention to the various limitations of accident statistics based on a given length of absence from work. These views are supported in the report of the Committee on Safety and Health at Work (see this GAZETTE, July 1972, page 611). A relevant discussion is contained in an explanatory note on accidents notified under the Factories Act obtainable from the Department of Employment, Factory Inspectorate Division FIC 4, Baynards House, Chepstow Place, London W2.

#### EMPLOYMENT OF WOMEN AND YOUNG PERSONS: SPECIAL EXEMPTION ORDERS

The Factories Act 1961 and related legislation place restrictions on the employment of women and young persons under 18 years of age in factories and other workplaces. Section 117 of the Factories Act 1961 enables the Secretary of State for Employment, subject to certain conditions, to grant exemptions from these restrictions for women and young persons aged 16 and over, by making special exemption orders for employment in particular factories. The number of women and young persons covered by special exemption orders current on July 31, 1974, according to the type of employment permitted\* were:

•The numbers shown are those stated by employers in their applications. The actual numbers of workers employed on conditions permitted by the orders may, however, vary from time to time. +"Extended hours" are those worked in excess of the limitations imposed by the Factories Act for daily hours or overtime. + "Includes 20,662 persons employed on shift systems involving work on Sundays, or on Saturday afternoons, but not included under those headings. §Part-time work outside the hours of employment allowed by the Factories Act.

#### FEMALES IN PART-TIME EMPLOYMENT IN MANUFACTURING INDUSTRIES

The monthly estimates of the numbers employed include not only persons normally in full-time employment, but also persons who normally take only part-time work. For manufacturing industries, separate information about the number of females in part-time employment is obtained each quarter on returns rendered by employers. The estimates for June 1974, which are based on the returns from a new sample of employers (see note on page 736 of the August issue of this GAZETTE) are given in the table below.

Estimates for previous months, which were based on the discontinued sample of employers, give slightly lower results than those obtained from the new sample. However, the new figures are consistent with the trend observed from the 1972 and 1973 censuses of employment.

Part-time employment is defined as ordinarily involving not more than 30 hours a week.

Estimated number of females in part-time employment in manufacturing industries in Great Britain at mid-June 1974

Industry (Standard Industrial Classification 1968)	Estimated number (000's)	Percentage of total number of females employed in the industry	Industry (Standard Industrial Classification 1968)	Estimated number (000's)	Percentage of total number of females employed in the industry

\* In the absence of earnings data for February 1972 due to the effects of the coal mining dispute no index of wages and salaries per unit of output has been calculated for that month. he indices calculated for January and March 1972 are less reliable than usual.

## **News and notes**

#### DEPARTMENT OF EMPLOYMENT RESEARCH

This note describes further developments in the Department of Employment's research programme. It is the third to be issued by the department, the first two having been published in the March and June issues of this GAZETTE, and is a part of a series designed to provide a more detailed up-to-date account of the department's research activities than is possible in its annual reports.

#### Graduates and their jobs

The department has commissioned Dr K Hall, head of the manpower studies research unit, Heriot-Watt University to carry out a survey among University and CNAA graduates and HND and equivalent diplomates qualified in arts, social administration, business studies, science, engineering and technology. The main purpose of the survey is to gain an insight into employment patterns, job histories, earning power and unemployment of people who qualified ten years ago. Their experience will be compared with that of a group qualifying five years ago. The research will assess differing job search techniques including the role of the department and its agencies.

The survey will also investigate the quantity and quality of post-graduate and post-experience training especially that provided in the work situation and sponsored by employers.

In addition the work will be concerned with the job and status of holders of different qualifications and the jobs of qualified scientists and engineers will be analysed to see if there is any discernible movement down the job scale towards technician and supervisory functions. The project started in July 1974 and will take two and a half years to complete; the cost is about £38,000.

#### Chest X-rays

1970 = 100

Part of the function of the Employment Medical Advisory Service (EMAS) is to conduct examinations of employees who may be exposed to dust, in the asbestos industry, for instance. This includes taking chest radiographs.

In several of its studies EMAS is reaching the borders of epidemiological and statistical methodology and would consequently problems.

The department has agreed to finance a Ph.D. student at Imperial College, London University, under the supervision of Professor D. R. Cox of the statistics department, to evaluate for the EMAS the various methods of extracting information of value in epidemiological studies from the ILO U/C classification of chest radiographs. He will advise on the methods of classification to adopt in the context of studies undertaken by EMAS to ensure that, where it is possible and meaningful, there is compatibility with studies conducted at different points in time and in different industries. The methods will need to account for interand intra-observer variation and also where possible for the effects of other important factors such as film quality.

#### Labour market flows

university department, which could provide professional advice on these and other

In recent years considerable research has been undertaken which analyses changes in the *stock* of employees in employment. the self employed, and the unemployed. In contrast, the study of labour market flows is only in its infancy. This research, undertaken by Dr D. Metcalf, London School of Economics, and Mr R. Tarling, Cambridge (who is a part-time economic adviser in the Department), examines the gross flows into and out of the labour market for 13 selected years between 1955 and 1973. The flows are broken down into the "inflow to" and "outflow from" the following categories: employee jobs, armed forces, self employed, full time education, unemployment, sickness, prison and other institutions, retirements, other inactive, migration. death, double jobbing, and vacation jobs. The research explores, first how labour turnover, retirements, migration, etc., vary over the economic cycle; secondly the extent to which job changes occur with or without a bout of unemployment in between; thirdly the very large flows into and out of unemployment in relation to the stock of unemployment; and fourthly the large flows of women and girls into and out of the work force. The research may be viewed as a very modest start to a fuller model of the dynamics of the labour market. A draft for discussion has been prepared, and a final version will be produced after comments have been received.

#### benefit from closer relationships with a **EXEMPTION FROM TRAINING** LEVIES-REFERENCE BODY SET UP

From September 2, employers dissatisfied with an industrial training board's decision to refuse exemption from levy, can appeal to a body of referees.

This is the effect of an order\* laid before Parliament by the Secretary of State for Employment.

By amendment of the 1964 Act, the Employment and Training Act, 1973 introduced an exemption procedure by which employers who carry out adequate training do not have to pay an industrial training board levy, for a period of no more than three years.

Training boards' decisions on the issue of exemption certificates are based on criteria published after approval by the Manpower Services Commission and the Secretary of State. Any employer dissatisfied with a board's decision to refuse or revoke a certificate of levy exemption, with the date on which it comes into force, or with any condition attached to it, may apply to the board to reconsider it. The board must then do so. If the employer remains unsatisfied he may then refer the matter to the body of referees.

\* The Industrial Training (Levy Exemption References) egulations 1974, SI 1974, No. 1335.

#### INDUSTRIAL FATALITIES AND DISEASES

In July, 47 fatalities were reported under the Factories Act, compared with 58 in June. This total included 32 arising from factory processes, 11 from building operations and works of engineering construction, and four in docks and warehouses.

Fatalities in industries outside the scope of the Factories Act included three in mines and quarries reported in the four weeks ended July 27, compared with seven in the four weeks ended June 29. These three included two underground coal mine workers and none in quarries, compared with four and two a month earlier.

In the railway service there was one fatal accident in July and two in the previous month.

In July, no seamen employed in ships registered in the United Kingdom were fatally injured, compared with eight in June.

In July, 12 cases of industrial diseases were reported under the Factories Act. These comprised five of chrome ulceration, four of lead poisoning, one of aniline poisoning, one of anthrax and one of epitheliomatous ulceration.

#### CHAIRMAN FOR THE HEALTH AND INCREASE IN EMPLOYMENT SAFETY COMMISSION

Mr Bill Simpson has been appointed chairman of the Health and Safety Commission, which is expected to be set up on October 1, 1974.

Mr Simpson, who became a member of the National Executive Committee of the Amalgamated Union of Foundry Workers in 1955, is at present the general secretary of the Amalgamated Union of Engineering Workers (foundry section).

Under the Health and Safety at Work, etc Act 1974, the commission will be responsible for making arrangements to secure the health, safety and welfare of people at work, and to protect the public against risks to health and safety arising from the activities of people at work.

Details of the main provisions of the Act were outlined in an article on page 314 of the April issue of this GAZETTE.

#### DISABLED PERSONS REGISTER

At April 15, 1974, the number of persons registered under the Disabled Persons (Employment) Acts, 1944 and 1958, was 574,640, compared with 597,305 at April 16, 1973.

At July 8, 1974, there were 59,559 disabled persons on the register who were registered as unemployed of whom 53,027 were males and 6,532 females. Those suitable for ordinary employment were 44,148 males and 5,152 females, while there were 10,259 severely disabled persons classified as unlikely to obtain employment other than under special conditions. These severely disabled persons are excluded from the monthly unemployment figures given elsewhere in the GAZETTE.

In the four weeks ended July 3, 1974 4,740 registered disabled persons were placed in ordinary employment. They included 4,039 males, and 701 females. In addition 215 placings were made of registered disabled persons in sheltered employment.

#### TRAINING OPPORTUNITIES SCHEME

In the 13 weeks ended March 31, 1974, 17,259 persons were admitted to training under the Training Opportunities Scheme. Of the total, 15,969 were able-bodied and 1.290 disabled.

the period was 25,422 (23,261 able-bodied and 2,161 disabled), of whom 10,666 (9,971 able-bodied and 695 disabled) were at government training centres, 13,100 (12,326 able-bodied and 774 disabled) at colleges of further education, 1,104 (964 able-bodied and 140 disabled) at employers' establishments and 552 at residential (disabled) centres.

In the 13 weeks under review, training was completed by 9,378 persons (8,507 able-bodied and 871 disabled), and 7,892 (7,158 able-bodied and 734 disabled) were placed in employment.

### TRANSFER RATES

T

Unemployed workers who move away from home to take a job will receive increases in allowances and grants from August 14, under the Employment Transfer Scheme.

une.	
he new rates are:	
settling in grant	£7·84
lodging allowances	£7.84
continuing liability	£7.84 (maximum
allowances	p.w.
disturbance allow-	
ance	£2.50 p.w.
grant towards legal	maximum gran
expenses on	£170 for pur
house sale	chase; £250 fo
and/or purchase	sale.
rehousing grant	£135 standard rate (the
	enhanced rate
	of £400 and
	£600 remain
	unchanged).
he colory limit of job	

The salary limit of jobs for which workers may be offered assistance has been increased from £3,100 to £3,300. The new rates will apply to key workers and nucleus labour force schemes where appropriate.

#### SYSTEMATIC APPROACH TO INDUS-TRIAL RELATIONS IN THE SMALLER FIRM

In a recently published booklet,\* arising from the CIR's report<sup>+</sup> on Small Firms and the Code of Industrial Relations Practice, smaller firms are recommended to take a systematic approach to employee/ management relations. The booklet is designed as a practical guide for the smallfirm employer because he is in a position to have the greatest influence on the course of industrial relations in his firm.

It covers the main aspects of employee/ management relations in four separate sections, concerned with communications and consultation, grievance and disciplinary procedures, collective bargaining and employment policies for recruitment, training and employee records.

#### LOOKING FORWARD TO WORK

The total number in training at the end of Home background is a determining factor in the age at which a boy leaves school. Father's occupation, size of family, family income, accommodation, parent's education and parental attitudes also influence a boy's attitudes and behaviour in choosing and seeking a job. Those who are seen by teachers as immature, dull and uncooperative at school show the least satisfactory attitudes towards work.

Evidence of this comes from a recently published report\* of the first stage of a follow-up survey of 15 and 16 year-oldmale school leavers, commissioned from the Office of Population Censuses and

Surveys by the Central Youth Employment Executive.

Another of the findings is that less able boys, mainly early leavers, bear the brunt of local job scarcities, their demand for apprenticeships, in particular, far outrunning supply. This contrasts with the abler boys, aiming at higher status jobs, in the same employment area, who are less seriously affected by job scarcity.

The survey is based on interviews with 1,733 boy school-leavers, their parents. their teachers and careers officers in 10 representative areas of England and Wales, conducted between the summer term 1968 and Easter holiday 1969.

Carried out before the raising of the school-leaving age, its aim was to obtain detailed information about what happens during the period of transition from school to employment, and to examine the effectiveness of careers education and the Youth Employment Service in providing schoolleavers with information, guidance and practical help.

Information gathered by the survey was used to examine four main factors likely to influence a boy's attitudes and adjustment to work. These were personal characteristics, family background, school environment and the employment situation in the 10 areas of the survey.

A further report will consider the influence of these factors after the boys started work.

\* Looking forward to work, HMSO Price £4.60p.

#### HELPING PEOPLE BACK TO WORK

A new industrial rehabilitation unit at Birmingham, sited in the Queen Elizabeth Hospital centre, is to be directly linked with the hospital's own services to provide a comprehensive and continuous rehabilitation service for hospital patients. This scheme, believed to be the first of its kind in Europe, is reported in the latest issue of the Department of Employment's newspaper, DE News.

The unit will have a total of 150 places of which 30 will be for patients from Queen Elizabeth and other hospitals who attend for part time courses whilst continuing their medical treatment. The courses are designed to help disabled people to become accustomed to industrial discipline and build up the confidence necessary to resettle them in employment. Close liaison between the medical and rehabilitation services is essential to ensure a smooth transition from hospital bed to active rehabilitation.

Over the last 31 years the Department of Employment's industrial rehabilitation units (IRU's) have helped nearly 300,000 men and women back to work after lengthy absences through sickness, injury or unemployment. Each year about 14,000 people pass through the 26 IRU's which are based in the main industrial centres of Great Britain. Over half of those who complete their course obtain a job after leaving the unit or are sent for skill training within three months of leaving the unit.

## **Monthly Statistics**

SUMMARY

#### **Employment in Production Industries**

The estimated total number of employees in employment in to claim benefits in Great Britain on August 12, 1974 was 15,577, industries covered by the index of industrial production in Great a rise of 5,306 since July 8, 1974. Britain at mid-July 1974 was 9,634,500 (7,126,100 males and 2.508.400 females). The total included 7.650.900 (5.312.700 males and 2,338,200 females) in manufacturing industries, and Overtime and short-time 1,306,700 (1,212,900 males and 93,900 females) in construction. The total in these production industries was 46,600 higher In the week ended July 13, 1974 the estimated number of operathan that for June 1974 and 104,700 lower than in July 1973. tives working overtime in manufacturing industries, was 1,971,600 The total in manufacturing industries was 41,400 higher than in June 1974 and 47,000 lower than in July 1973. The number in or about 35.2 per cent of all operatives. Each operative worked construction was 6,600 higher than in June 1974 and 41,500 an average of 9 hours overtime during the week. The total lower than in July 1973. The seasonally adjusted index for the number of hours of overtime worked, seasonally adjusted, was 17.41 millions (17.17 millions in June). production industries (av. 1970 = 100) was 94.5 (94.4 at mid-In the same week the estimated number on short-time in these June) and for manufacturing industries 94.3 (94.2 at mid-June).

#### Unemployment

The number of unemployed, excluding school-leavers and adult students seeking vacation jobs, in Great Britain on August 12, At August 31, 1974, the indices of weekly rates of wages and of 1974 was 572,687. After adjustment for normal seasonal variahourly rates of wages of all workers (July 31, 1972 = 100) were tions, the number was 605,900, representing 2.7 per cent of all 142.8 and 143.5, compared with 137.2 and 138.0 at July 31. employees, compared with 581,600 in July 1974. In addition, there were 55,976 unemployed school-leavers and 27,634 unemployed adult students, so that the total number unemployed was Index of retail prices 656,297, a rise of 89,456 since July. This total represents 2.9 per cent of all employees.

At August 20, the official retail prices index was 109.8 (prices at Of the number unemployed in August, 315, 364 (47.3 per cent) January 15, 1974 = 100), compared with 109.7 at July 16. The had been on the register for up to 8 weeks, 212,998 (32.0 per cent) index for food was 106.1, compared with 105.5 at July 16. for up to 4 weeks, and 112,085 (16.8 per cent) for up to 2 weeks.

#### Vacancies

The number of stoppages of work due to industrial disputes in The number of vacancies notified to employment offices and the United Kingdom beginning in August which came to the remaining unfilled in Great Britain on August 7, 1974 was notice of the Department of Employment was 180, involving 302,733; 27,465 lower than on July 3, 1974. After adjustment approximately 64,500 workers. During the month approximately for normal seasonal variations, the number was 298,200, com-82,800 workers were involved in stoppages, including some pared with 317,100 in July. The number of vacancies notified to which had continued from the previous month, and 502,000 careers offices and remaining unfilled in Great Britain on working days were lost, including 122,000 lost through stoppages. August 7, 1974 was 103,881; 17,932 lower than on July 3, 1974. which had continued from the previous month.

> TIME RATES OF WAGES AND HOURS OF WORK The price of the 1974 issue of this annual volume, published by HMSO, is £2.60 net and £2.82 by post, (not £2.77, as stated in the August GAZETTE).

#### **Temporarily stopped**

The number of temporarily stopped workers registered in order

industries was 26,500 or about 0.5 per cent of all operatives, each losing 14 hours on average.

#### Basic rates of wages and hours of work

#### Stoppages of work

### INDUSTRIAL ANALYSIS OF EMPLOYEES IN EMPLOYMENT

The table below provides an industrial analysis of employees in employment in Great Britain for industries covered by the Index of Production at mid-July 1974, for the two preceding months and for July 1973.

The term employees in employment includes persons temporarily laid off but still on employers' payrolls and persons unable to work because of short-term sickness. Part-time workers are included and counted as full units.

For manufacturing industries, the returns rendered monthly by employers under the Statistics of Trade Act, 1947 have been used to provide a ratio of change since the preceding June. For the remaining industries in the table, estimates of monthly changes have been provided by the nationalised industries and government departments concerned.

The estimates for manufacturing industries from June 1974 onwards are based on a new sample of employers (see note on page 736 of the August issue of this GAZETTE).

#### OVERTIME AND SHORT-TIME IN MANUFACTURING INDUSTRIES

In the week ended July 13, 1974, it is estimated that the total number of operatives working overtime in manufacturing industries was 1,971,600 or about 35.2 per cent of all operatives, each working about 9 hours on average.

In the same week, the estimated number on short-time was 26,500 or 0.5 per cent of all operatives, each losing about 14 hours on average.

Estimates by industry are shown in table 1 below. Table 2 gives the corresponding estimates for week ending June 15, 1974. Both tables are based on returns from a new sample of employers which is now being used for the Department's monthly employment estimates (see note on page 736 of the August 1974 issue of the GAZETTE). The estimates incorporate a number of changes

compared with those for months prior to June 1974. Firstly, shipbuilding and ship repairing are now included. Secondly, overtime worked by maintenance workers is now included. Thirdly, and the largest change, the estimates now relate to all firms, not to those with 11 or more employees as before.

All figures relate to operatives, ie they exclude administrative, technical and clerical workers. Hours of overtime refer to hours of overtime actually worked in excess of normal hours. The information about short-time relates to that arranged by the employer and does not include that lost because of sickness, holidays or absenteeism. Operatives stood off by an employer for a whole week are assumed to have been on short-time for 40 hours each.

#### **UNEMPLOYMENT ON AUGUST 12, 1974**

students, in Great Britain on August 12, 1974, was 572,687 44,615 more than on July 8, 1974. The seasonally adjusted figur was 605,900 (2.7 per cent of employees). This figure rose b 24,300 between the July and August counts, and by an average of 19,200 per month between May and August, 1974.

Between July and August the number unemployed rose 89,456. This change included a rise of 41,565 school-leavers, an a rise of 3,276 adult students seeking vacational jobs.

The proportions of the number unemployed who on August 12 1974 had been registered for up to 2, 4 and 8 weeks were 16.8 per cent, 32.0 per cent, and 47.3 per cent respectively. The corresponding proportions in July were 21.4 per cent, 31.9 per cent, and 43.8 per cent respectively.

#### Table 1 Regional analysis of unemployment: August 12, 1974.

Note: The denominators used in calculating the percentage rates of unemployment are the mid-1973 estimates of employees (employed and unemployed) which are available on request from the Director of Statistics, Department of Employment, Statistics Branch C.I., Orphanage Road, Watford WD1 1PJ. \* The composition of development and intermediate areas is given in BRITISH LABOUR STATISTICS: YEARBOOK 1971, APPENDIX F. (HMSO): The figures do not include the new development areas and intermediate areas designated from August 14, 1974. The percentage rate for North Wales relates to the intermediate area plus part of the Llandudno travel-to-work area outside the designated area. The percentage rate for South East Wales relates to the intermediate area plus parts of the Pontypool, Cardiff and Newport travel-to-work areas outside the designated area. The percentage rate shown for the Scottish intermediate area is that for the Edinburgh travel-to-work area of which the Scottish intermediate area forms a substantial part.  $\dagger$  Figures relate to a group of local employment office areas details of which are given in Appendix F., op cit.

#### Unemployment in development areas, intermediate areas and certain local areas at August 12, 1974 (continued)

### TEMPORARILY STOPPED

The number of temporarily stopped workers registered to claim benefits in Great Britain on August 12, 1974 was 15,577. This figure was 5,306 higher than in July.

These workers were suspended by their employers on the understanding that they would shortly resume work. They are regarded as still having jobs, and are not included in the unemployment statistics.

#### VACANCIES

The number of vacancies notified to employment offices and remaining unfilled in Great Britain on August 7, 1974, was 302,733; 27,465 lower than on July 3, 1974.

The seasonally adjusted figure of notified vacancies at employment offices on August 7, 1974 was 298,200; 18,900 lower than that for July 3, 1974 and 15,600 lower than on May 8, 1974.

The number of vacancies notified to careers offices and remaining unfilled on August 7, 1974 was 103,881; 17,932 lower than on July 3, 1974.

Tables 1 and 2 give figures of unfilled vacancies analysed by region and by industry respectively. The figures represent only the number of vacancies notified to local employment offices and youth employment service careers offices by employers and remaining unfilled on August 7, 1974. The figures do not purport to represent the total outstanding requirements of all employers. Nevertheless, comparison of the figures for various dates provides some indication of the change in the demand for labour.

#### STOPPAGES OF WORK

The official series of statistics of stoppages of work due to industrial disputes in the United Kingdom relates to disputes connected with terms and conditions of employment. Stoppages involving fewer than 10 workers or lasting less than one day are excluded except where the aggregate of working days lost exceeded 100. Workers involved are those directly involved and indirectly involved (thrown out of work although not parties to the disputes) at the establishments where the disputes occurred. The number of working days lost is the aggregate of days lost by workers both directly and indirectly involved (as defined). It follows that the statistics do not reflect repercussions elsewhere, that is, at establishments other than those at which the disputes occurred. For example, the statistics exclude people laid off and working days lost at such establishments through shortages of material caused by the stoppages included in the statistics. More information about definitions and qualifications is given in a report on the statistics for the year 1973 on pages 505 to 517 of the June 1974 issue of this GAZETTE.

The number of stoppages beginning in August\* which came to the notice of the department, was 180. In addition, 63 stoppages which began before August were still in progress at the beginning of the month.

The approximate number of workers involved at the establishments where these stoppages occurred is estimated at 82,800 consisting of 64,500 involved in stoppages which began in August and 18,300 involved in stoppages which had continued from the previous month. The latter figure includes 1,900 workers involved for the first time in August in stoppages which began in earlier months. Of the 64,500 workers involved in stoppages which began in August, 37,600 were directly involved and 26,900 indirectly involved.

The aggregate of 502,000 working days lost in August includes 122,000 days lost through stoppages which had continued from the previous month.

#### PROMINENT STOPPAGES OF WORK DURING AUGUST

At a man-made fibre factory in North Wales 1,100 shift process workers stopped work on July 30 because of a dispute relating to manning arrangements. A further 300 employees joined the stoppage on July 31. Informal meetings took place in August between the management and shop stewards but no progress was made. The stoppage was still in progress at the end of the month

Negotiations on the annual review of salary between management and clerical staff unions at a Scottish car assembly plant broke down on August 5 and 450 clerical staff stopped work from August 6. As a result over 4,000 production workers were laid off from the same date. Joint meetings between the company and the union representatives were held without breaking the deadlock. A meeting of staff directly involved in the dispute elected by a large majority to continue the stoppage, which was still in progress at the end of August.

Total	174	35,600	392,000

\* The figures for the month under review are provisional and subject to revision, normally upwards, to take account of additional or revised information received after going to press; continuous revision is reflected in figures for earlier months in the current year included in the cumulative totals on this page and in table 133 on page 874 of this GAZETTE. The figures have been rounded to the nearest 100 workers and 1,000 working days; in the tables the sums of the constituent items may not, therefore, agree th the totals shown. t Less than 500 working days.

#### BASIC WEEKLY RATES OF WAGES, NORMAL WEEKLY HOURS AND BASIC HOURLY RATES OF WAGES

The statistical tables in this article relate to changes in basic rates of wages or minimum entitlements and reductions in normal weekly hours, where these are the outcome of centrally determined arrangements, usually national collective agreements or statutory wages regulation orders. In general, no account is taken of changes determined by local negotiations at district, establishment or shop floor level. The figures do not, therefore. necessarily imply a corresponding change in the local rates or actual earnings of those who are being paid at rates above the basic or minimum rates. The figures are provisional and relate to manual workers only.

#### Indices

At August 31, 1974 the indices of changes in weekly rates of wages, of normal weekly hours and of hourly rates of wages for all workers, compared with the previous five months, were:

#### ALL INDUSTRIES AND SERVICES

Normal weekly	Basic hourly	Basic	Basic
hours	rates	weekly rates	hourly rates
99·5 99·5 99·5 99·5	126·4 127·1 130·9 135·5	15·1 12·9 15·4 17·0 18·7	15·4 13·1 15·5 17·2 18·9

Notes: 1. The full index numbers and explanatory notes are given in table 130. 2. The April, May, June and July figures have been revised to include changes having retrospective effect.

#### Principal changes reported in August

Brief details of the principal changes, with operative dates, are set out below:

Engineering—UK: Increases in national minimum rates of £3:50 a week for skilled men, £2:75 for unskilled men and for women and proportional amounts for young workers, were agreed in April. In accordance with the terms of that agree-ment the new rates have been incorporated on the anniversary of the previous national change (first full pay week following August 25). Post Office—UK: (Manipulative grades) Increases of varying amounts following servicing for yoursel. (Muk 26) Post Office—UK: (Manipulative grades) Increases of varying amounts following revision of pay scale (July 26).
 Post Office—UK: (Engineering, motor transport supplies and factory rank and file grades) Increases of amounts ranging from £2.57 to £5.01 a week, according to occupation for adult workers (July 1). Increases of amounts ranging from £3.05 to £5.38 a week, according to occupation for adult workers (July 26).
 Retail furnishing and allied trades (Wages Council)—GB: Increases in statutory minimum remuneration of £2.25 for all workers (augus 26).
 Vehicle building—England, Wales and Northern Ireland: Increase in minimum wage rates of 875p an hour for adult workers, with proportional amounts for young workers (April 1).
 Threshold payments: Special supplementary payments under threshold arrangements account for much of the change between July and August.

Full details of changes reported during the month are given in the separate publication CHANGES IN RATES OF WAGES AND HOURS OF WORK.

The changes in monetary amounts represent the increases in basic full-time weekly rates of wages or minimum entitlement only, based on the normal working week, that is excluding short time or overtime.

Estimates of the changes reported in August indicate that the basic weekly rates or minimum entitlements of some 8,795,00 workers were increased by a total of £12,805,000 but, as state earlier, this does not necessarily imply a corresponding chang in "market" rates or actual earnings. For these purposes therefore, any general increases are regarded as increases in bas or minimum rates.

The total estimates, referred to above, include figures relatin to those changes which were reported in August with operativ effect from earlier months (310,000 workers, £2,785,000 weekly rates of wages). Of the total increase of £12,805,000 about £7,910,000 resulted from direct negotiations between employer associations and trade unions, £3,725,000 from threshold agreements linked to movements of the Retail Prices Index, £640,000

#### SEPTEMBER 1974 DEPARTMENT OF EMPLOYMENT GAZETTE 833

from statutory wages regulation orders and £530,000 from arrangements made by joint industrial councils or similar bodies established by voluntary agreement.

#### Analysis of aggregate changes

The following tables show (a) the cumulative effect of the changes, by industry group and in total, during the period January to August 1974, with the total figures for the corresponding period in the previous year entered below, and (b) the month by month effect of the changes of the most recent period of thirteen months. In the columns showing the numbers of workers affected,

those concerned in two or more changes in any period are counted only once.

#### **RETAIL PRICES, AUGUST 20, 1974**

As stated on page 168 of the February issue of this GAZETTE, the reference base of the Index of Retail Prices has been changed to January 15, 1974 = 100. Indices on both references are given below. This practice will continue up to and including publication of the index for December 10, 1974.

At August 20, 1974 the general\* retail prices index was 109.8 (prices at January 15, 1974 = 100). On the base January 16, 1962 = 100, the figure was 210.6, compared with 210.4 at July 16 and with 180.2 at August 21, 1973.

The principal changes during the month were falls in the average levels of rates charges as a result of the introduction of additional rates relief, of prices of some commodities following the reduction in the rate of value added tax, and of prices of fresh vegetables. There were rises in the average levels of prices of electricity and many other goods and services.

The index for items of food whose prices show significant seasonal variations, namely home-killed lamb, fresh and smoked fish, eggs, fresh vegetables and fresh fruit, was 99.1, and that for all other items of food was 107.8. The index for all items except items of food the prices of which show significant seasonal variations was 110.3.

The principal changes in the groups in the month were:

Food: Rises in the average levels of prices of sweets and chocolates, eggs, biscuits, sugar, bacon, dessert apples, oranges and canned fruit were partly offset by falls in average price levels of prices of tomatoes, potatoes, other fresh vegetables and lamb. The index for the food group as a whole rose by about one-half of one per cent to 106-11 compared with 105-5 in July. The index for foods whose prices show significant seasonal variations fell by nearly 4 per cent to 99-1, compared with 103-11 in July. **Alcoholic drink**: Falls in the average levels of prices of beer, whisky and gin, following the reduction in the rate of value added tax on July 29 were partly offset by a rise in the average level of prices of sherry. The index for the alcoholic drink group as a whole fell by nearly one per cent to 110-7, compared with 111-7 in July. **Tobacco**: There was a fall of about one per cent in the average level of prices of cigarettes and tobacco following the reduction in the rate of value added tax on July 29. The group index was 120-3, compared with 121-6 in July. **Housing**: The additional rates relief introduced at the end of July was partly offset by higher prices for materials used in home decorations but the index for the housing group as a whole fell by nearly a per cent to 105-1, compared with 108-2 in July.

July. Fuel and light: Mainly as a result of a rise in the average level of charges for electricity, the group index rose by rather less than two per cent to 115-7, compared with 113-6 in July.

Transport and vehicles: Rises in the average levels of prices of second-hand cars Iransport and vehicles: Kises in the average levels of prices of second-nand cars and of charges for the maintenance of motor vehicles and in bus fares in some areas were partly offset by falls in the prices of petrol following a reduction in the rate of value added tax. The group index rose by nearly one-half of one per cent to 112-7, compared with 112-2 in July. Clothing and footwear: There were rises in the average levels of prices of most items of clothing and the group index rose by about one per cent to 110-9, compared with 109-7 in July.

with 109.7 in July. **Miscellaneous goods:** Rises in the prices of some paper products and some other items caused the group index to rise by rather less than one per cent to 113.3, compared with 112.4 in July. **Services:** Higher charges for telephone and some other services caused the group index to rise by rather more than one per cent to 109.3, compared with 108.0 in July. **Meals bought and consumed outside the home:** There was a rise of rather more than one per cent in the average level of prices in this group and the group index was 110.4, compared with 109.1 in July.

Detailed figures for various groups and sub-groups are: Group and sub-group Index figure

two indices for pensioner households. These "pensioner" indices are given in tables 132(a) and 132(b) in this GAZETTE.

#### AVERAGE RETAIL PRICES OF ITEMS OF FOOD

Average retail prices on August 20, 1974 for a number of important items of food, derived from prices collected for the purposes of the General Index of Retail Prices in 200 areas in the United Kingdom, are given below.

Many of the items vary in quality from retailer to retailer, and partly because of these differences there are considerable variations in prices charged for many items. An indication of

## **Statistical series**

Tables 101-134 in this section of the GAZETTE give the principal statistics compiled regularly by the department in the form of time series, including the latest available figures together with comparable figures for preceding dates and years.

They are arranged in subject groups, covering the working population, employment, unemployment, unfilled vacancies, hours worked, earnings, wage rates and hours of work, retail prices and stoppages of work resulting from industrial disputes. Some of the main series are shown as charts. Brief definitions of the terms used are at the end of this section.

The national statistics relate either to Great Britain or the United Kingdom, and regional statistics to the Standard Regions for Statistical Purposes (see this GAZETTE, January 1966, page 20) which conform generally to the Economic Planning Regions.

Working population. The changing size and composition of the working population of Great Britain at quarterly dates is in table 101, and more detailed analyses of the employment and unemployment figures are in subsequent tables.

Employment. As it is not practicable to estimate short-term changes in the numbers of self-employed persons, the group of employment tables relates only to employees. Monthly estimates are given for broad groups of industries covered by the Index of Industrial Production, and annual mid-year estimates for other groups (table 103). The totals in employment in all industries and services at June each year are analysed by region in table 102

Unemployment. Tables 104-116 show the numbers of unemployed in Great Britain, and in each region, at the monthly counts. For Great Britain separate figures are given for males and females. People are included in the counts if they are registered for employment at a local employment office or youth employment service careers office, have no job, and are both capable of and available for work on the count date. The counts include both claimants to unemployment benefit and people not claiming benefit, but they exclude non-claimants who are registered only for part-time work. Severely disabled people who are considered unlikely to obtain work other than under special conditions are also excluded.

The number unemployed is expressed as a percentage of total employees (employed and unemployed) to indicate the incidence rate of unemployment. Separate figures are given in the tables for young people seeking their first employment who are described as school-leavers and for adult students seeking temporary employment during vacation periods. The numbers unemployed excluding school-leavers and adult students are adjusted for seasonal variations.

An industrial analysis of national statistics for the unemployed excluding school-leavers and adult students, is presented in table 117. The unemployed are analysed according to the duration of their current spell of registration in table 118.

Temporarily stopped workers who register to claim benefit, but have jobs to which they expect to return, are not included in the unemployment statistics, but are counted separately.

Unfilled vacancies. The vacancy statistics in table 119 relate to the vacancies notified by employers to local employment offices and youth employment service careers offices, and which, at the date of count, remain unfilled. They do not measure the total volume of unsatisfied immediate manpower requirements of employers.

Hours worked. This group of tables provides additional information about the level of industrial activity. Table 120 gives estimates of overtime and short-time working by *operatives* in manufacturing industries; table 121 the total hours worked and the average hours worked per operative per week in broad

industry groups in index form. Average weekly hours of employees are included in tables in the following groups.

Earnings and wage rates. Average weekly and hourly earnings and hours of manual workers in the United Kingdom in industry groups covered by the regular (October) enquiries are given in tables 122 and 123; averages for full-time men and women are given by industry group in table 122. Average earnings of all non-manual workers in Great Britain in all industries, and in all manufacturing industries, are shown in table 124 in index form. Table 125 is a comparative table of annual percentage changes in hourly earnings and hourly wage rates of full-time manual workers. New Earnings Survey (April) estimates of average weekly and hourly earnings and weekly hours of various categories of employees in Great Britain are given in table 126. Table 127 shows, by industry group and in index form, average earnings of all employees in Great Britain, derived from a monthly survey: the indices for all manufacturing and all industries are also given adjusted for seasonal variations. Average earnings of full-time manual men in the engineering, shipbuilding and chemical industries are given by occupation in table 128, in index form. Indices of basic weekly and hourly wage rates and normal hours are given by industry group in table 131 and for all manufacturing and all industries in table 130. (Table 129 has been discontinued.)

Retail prices. Table 132 gives the all-items and broad item group figures for the official General Index of Retail Prices. Quarterly all-items (excluding housing) indices for pensioner households are given in tables 132(a) and 132(b).

Industrial stoppages. Details of the number of stoppages of work due to industrial disputes, the number of workers involved and days lost are in table 133.

Output per head and labour costs. Table 134 provides annual and quarterly indices of output, employment and output per person employed for the whole economy, the Index of Production and manufacturing sectors, and for selected industries where output and employment can be reasonably matched. Annual and quarterly indices of total domestic incomes per unit of output are given for the whole economy, with separate indices for the largest component-wages and salaries. Annual indices of labour costs per unit of output (including all items for which regular data is available) are shown for the whole economy and for selected industries. A full description is given in this GAZETTE, October 1968, pages 801-803.

Conventions. The following standard symbols are used: not available

- nil or negligible (less than half the final digit shown)
- n.e.s. not elsewhere specified
- UK Standard Industrial Classification (1958 or SIC 1968 edition as indicated)

A line across a column between two consecutive figures indicates that the figures above and below the line have been compiled on a different basis, and are not wholly comparable, or that they relate to different groups for which totals are given in the table.

Where figures have been rounded to the final digit, there may be an apparent slight discrepancy between the sum of the constituent items and the total as shown.

Although figures may be given in unrounded form to facilitate the calculation of percentage changes, rates of change, etc., by users, this does not imply that the figures can be estimated to this degree of precision, and it must be recognised that they may be the subject of sampling and other errors.

Notes: 1. Until 1971 the annual employment statistics were derived mainly from counts of national insurance cards. In 1971 a new system was introduced because of proposals to abolish the use of national insurance cards for employees within the next wears.
The new system relies on returns from employers. To provide a link between the old system and the new system, both a card count and a census under the new system vere taken in 1971.
The old count of national insurance cards included many employees who work for part of the year only, and who would not have been in employment in the particular yue in 1971 is considerably lower than the card count. Another difference is that a person who had two regular jobs with different employers in the week of the census was counted twice in the cards out in some industries and services where secondary employment is common.

4. The provisional seasonally adjusted indices for Index of Production industries and manufacturing from July 1973 to May 1974 include a correction for downward bias which has been indentified in past provisional estimates. No further correction for bias has been made after May 1974 because estimates from June 1974 are based on a new sample of employers (see page 736 of the August issue of this GAZETTE). No such corrections are made to the total employment figures for these series.
\* The industries included in the Index of Production are Orders II-XXI of the SIC (1968).
† Excluding members of HM Forces.
‡ Returns from employers are used for the compilation of this table. Owing to the interruption of postal services, the January 1971 figures have been calculated from a smaller number of returns than usual, and no estimates are available for February 1971.

*Note:* The denominator used in calculating the percentage rate is the appropriate mid-year estimate of total employees (employed and unemployed). The estimate for mid-1973 is 13,940,000, and this has been used to calculate the rate for each month since January 1973.

*Note:* The denominator used in calculating the percentage rate is the appropriate mid-year estimate of total employees (employed and unemployed). The estimate for mid-1973 is 22,728,000, and this has been used to calculate the rate for each month since January 1973. \* Figures prior to July 1971 are estimated. TABLE 105

### UNEMPLOYMENT males: Great Britain

\* Figures prior to July 1971 are estimated.

#### **Great Britain: females**

*Note:* The denominator used in calculating the percentage rate is the appropriate mid-year estimate of total employees (employed and unemployed). The estimate for mid-1973 is 8,789,000, and this has been used to calculate the rate for each month since January 1973. \* Figures prior to July 1971 are estimated.

Notes: 1. The denominator used in calculating the percentage rate is the appropriate mid-year estimate of total employees (employed and unemployed); for months from January 1973 onwards the estimates for mid-1973 have been used. 2. The boundaries of South East Standard Region were revised in April 1974 (see page 533 of the June issue of this GAZETTE). Figures for April 1974 are shown on both the old and the revised basis. The mid-1973 estimates used to calculate the percentage rates are from January 1973 to April 1974 on the old basis, 7,565,000 and, from April 1974 on the revised basis, 7,450,000.

\* Figures prior to July 1971 are estimated.

*Note:* The denominator used in calculating the percentage rate is the appropriate mid-year estimate of total employees (employed and unemployed). The estimate for mid-1973 is 663,000, and this has been used to calculate the rate for each month since January 1973.

Notes: 1. The denominator used in calculating the percentage rate is the appropriate mid-year estimate of total employees (employed and unemployed); for months from January 1973 onwards the estimates for mid-1973 have been used. 2. The boundaries of South West Standard Region were revised in April 1974 (see page 533 of the June issue of this GAZETTE). Figures for April 1974 are shown on both the old and the revised basis. The mid-1973 estimates used to calculate the percentage rates are, from January 1973 to April 1974 on the old basis, 1,428,000 and, from April 1974 on the revised basis, 1,544,000.

Note: The denominator used in calculating the percentage rate is the appropriate	
mid-year estimate of total employees (employed and unemployed). The estimate	
for mid-1973 is 2,288,000, and this has been used to calculate the rate for each month	
since January 1973.

The denominator used in calculating the percentage rate is the appropriate mid-year estimate of total employees (employed and unemployed); for months from January 1973 onwards the estimates for mid-1973 have been used.
 The boundaries of East Midlands Standard Region were revised in April 1974 (see page 533 of the June issue of this GAZETTE). Figures for April 1974 are shown on both the old and the revised basis. The mid-1973 estimates used to calculate the percentage rates are, from January 1973 to April 1974 on the old basis, 1,437,000 and, from April 1974 on the revised basis, 1,503,000.

Notes:
--------

Notes: 1. The denominator used in calculating the percentage rate is the appropriate mid-year estimate of total employees (employed and unemployed); for months from January 1973 onwards the estimates for mid-1973 have been used. 2. The boundaries of Yorkshire and Humberside Standard Region were revised in April 1974 (see page 533 of the June issue of this GAZETTE). Figures for April 1974 are shown on both the old and the revised basis. The mid-1973 estimates used to calculate the percentage rates are, from January 1973 to April 1974 on the old basis, 1,994,000 and from April 1974 on the revised basis, 2,018,000.

\* Figures prior to July 1971 are estimated.

*Note:* The denominator used in calculating the percentage rate is the appropriate mid-year estimate of total employees (employed and unemployed). The estimate for mid-1973 is 1,032,000, and this has been used to calculate the rate for each month since January 1973.

Notes: 1. The denominator used in calculating the percentage rate is the appropriate mid-year estimate of total employees (employed and unemployed); for months from January 1973 onwards the estimates for mid-1973 have been used. 2. The boundaries of North Standard Region were revised in April 1974 (see page 533 of the June issue of this GAZETTE). Figures for April 1974 are shown on both the old and the revised basis. The mid-1973 setimates used to calculate the percentage rates are, from January 1973 to April 1974 on the old basis, 1,331,000 and, from April 1974 on the revised basis, 1,304,000.

\* Figures prior to July 1971 are estimated.

Note: The denominator used in calculating the percentage rate is the appropriate mid-year estimate of total employees (employed and unemployed). The estimate for mid-1973 is 2,142,000, and this has been used to calculate the rate for each month since January 1973.

\* Figures prior to July 1971 are estimated.

\*Excluding MLH 884-888 (Catering, hotels, etc.) in Order XXVI. Including persons aged 18 years and over not classified by industry. † The figures from June 1969 onwards have been compiled using the 1968 edition of the Standard Industrial Classification. The figures between 1959 and May 1969 were compiled using the 1958 edition of the SIC. This change slightly affected the numbers unemployed in some industries so that figures since June 1969 may not be strictly comparable with those for earlier periods. <sup>‡</sup> The all industries figure is adjusted to take into account amendments notified on the four days following the date of the count. All other figures from May 1972 are not so adjusted.

\* From May 1972, only the total unemployed (column 1) is adjusted to take into account amendments for the statistical date notified on the four days following the date of the count. The analysis by duration in columns 2 to 20 is not adjusted. See also reference to "Casuals" on page 548 of the June 1972 issue of this GAZETTE. † Because of the energy crisis, the detailed information about duration of unemployment (columns 2 to 20), was not collected in these months.

Note: See footnotes 1-3 to table 103. • In June 1974 a new sampling system was introduced for the monthly employment returns (see page 736 of the August issue of this GAZETTE). At the same time revisions have been made in the method of calculating overtime and short-time. Figures for June 1974 are still provisional but have been calculated on both the old and new basis. Thus, up to and including June 1974 (a) the figures had related to operatives at establishments with over 10 employees in all manufacturing industries except shipbuilding and ship-repairing but have excluded overtime worked by maintenance workers. The new series from June 1974 (b) relates to all operatives in manufacturing industries including shipbuilding and ship-repairing but have for the whole week are assumed to have been on short-time to the extent of 40 hours each. See footnote ‡ to table 103. The Foruary 1972 and again in January, February and March 1974, the volume of overtime and short-time was affected by an energy crisis. Figures after June 1973 are provisional and are subject to revision when the results of the 1974 Census of Employment are available.

The index of total weekly hours worked from July 1973 is subject to revision when the results of the 1974 Census of Employment become available. Both the index of total weekly hours worked and the index of average hours worked from November 1973 may be revised when the results of the October 1974 enquiry into the hours of work of manual workers are available.
 T Returns from employers are used for the compilation of this table. Because of the interruption of postal services, the January 1971 figures have been calculated from a smaller number of returns than usual, and no estimates are available for February 1971.
 The February 1972, the volume of overtime and short-time was affected by the power crisis and in January and February 1974 by the coal mining dispute.

### HOURS OF WORK

|| The factors used in calculating the index for June 1974 include the monthly employment figures derived from the new sample and the overtime and short-time figures shown at June 1974 (a) in table 120. See footnote \* to table 120 and box on page 736 of the August issue of this GAZETTE The figures for July 1974 will appear in a later issue. *Note:* A full account of the method of calculation was published on pages 305 to 307 of the August 1962 issue, and on page 404 of the October 1963 issue, respectively, of this GAZETTE.

973	October	+15.7	+15.0	+14.6	+18.1	- 3.5‡
	October	+15.1	+14.1	+13.6	+12.1	+ 1.5

Note: The table covers full-time workers in the industries included in the department's regular enquiries into the earnings and hours of manual workers (table 122).
\* The figures in column (3) are calculated by:

Assuming that the amount of overtime is equal to the difference between the actual hours worked and the average of normal weekly hours;
Multiplying this difference by 11 (the assumed rate of overtime pay);
Adding the resulting figure to the average of normal weekly hours to produce a "standard hours equivalent" of actual hours worked; and

### EARNINGS AND HOURS

<sup>†</sup> The industries covered are manufacturing, mining and quarrying (except coal mining); construction; gas, electricity and water; transport and communication (except railways and London Transport); certain miscellaneous services and public admini-

### Index of average salaries: non-manual employees: Great Britain

4. Dividing the average weekly earnings by the "standard hours equivalent" which gives a reasonably satisfactory estimate of average hourly earnings exclusive of overtime.
† The figures in this column are based on the hourly wage rates index.
‡ The engineering and construction industries had large wage rate increases in August 1972 and September 1972, respectively, increases which were not fully reflected in actual earnings by the date of the October 1972 earnings enquiry.

Earnings, wage rates, retail prices, wages and salaries per unit of output

Log Scale

\* These estimates relate only to employees whose earnings were not affected by absence.

*Note:* The April 1970 figures differ slightly from those given when the results of the 1970 survey were first published. They are estimates obtained from the 1970 survey data using methods of measuring earnings and hours similar, so far as possible, to those used in the 1971 survey—see page 986 of the November 1971 issue of this GAZETTE.

AVERAGE 1970 = 100

#### EARNINGS

#### Great Britain: index of average earnings: all employees (monthly enquiry)

\* England and Wales only.
\* Except sea transport and postal services.
‡ Consisting of laundries and dry cleaning, motor repairers and garages and repair of boots and shoes.
\* Because of disputes in coalmining a reliable index for "mining and quarrying" cannot be calculated for these months. In each case the figures for coalmining for a month earlier have been used in the compilation of the index "all industries and services covered".
# As industrial activity was severely disrupted by restricted electricity supplies, the

monthly survey was not carried out in February and so figures cannot be calculated for this month. ¶ Provisional. \*\* Insufficient information is available to enable a reliable index for "agriculture" to be calculated for the current month, but the best possible estimate has been used in the compilation of the index "all industries and services covered". †† The figures reflect temporary reductions in earnings while three-day working and other restrictions were in operation.

Note (1): This series is explained in articles on page 214 of the March 1967 issue of this GAZETTE and on pages 613-615 of the July 1971 issue. The information collected is the gross remuneration including overtime payments, bonuses, commission, etc. Monthly earnings have been converted into weekly earnings by using the formula:—monthly earnings multiplied by 12 and divided by 52. In arriving at the indices of

Index of average earnings: all employees (monthly enquiry): Great Britain

average earnings the total remuneration is divided by the total number of employees without distinguishing between males and females, adults and juveniles, manual and non-manual employees or between full-time and part-time employees. *Note* (2): The seasonally adjusted figures are based on the data for 1963 to 1972.

-

The industries covered comprise the following Minimum List Headings of the Standard Industrial Classification 1968: \* 370-1. 271-273; 276-278. ‡ 331-349; 361; 363-369; 370-2; 380-385; 390-391; 393; 399.

Note: The specified pay-week for the January 1974 enquiry occurred in the period when electricity supplies to industry were restricted as part of the measures taken at the time of the coal mining dispute. This may have affected the figures although it is uncertain by how much, and other factors could also have exerted an influence.

Notes: (1) These indices are based on minimum entitlements (namely basic rates of wages, (1) These indices are based on minimum entitlements (namely basic rates of wages, standard rates, minimum guarantees or minimum earnings levels as the case may be) and normal weekly hours of work which are generally the outcome of centrally determined arrangements, usually national collective agreements or statutory wages regulation orders. Where an agreement or order provides for both a basic rate and a minimum earnings guarantee for a normal week, the higher of the two amounts is taken as the minimum entilement. Details of the representative industries and services for which changes are taken into account, and the method of calculation are given in the issues of this GAZETTE for February 1957, September 1957, April 1958, February 1959, January 1960 and September 1972.

#### WAGE RATES AND HOURS

Indices of basic weekly and hourly rates of wages and normal weekly hours: manual workers: United Kingdom

(2) The statistics do not take account of changes determined by local negotiations at establishment or shop floor level. They do not reflect changes in *earnings* or in *actual* hours worked due to such factors as overtime, short-time, variations in output, etc.
 (3) The figures relate to the end of the month.
 (4) Publication of the index figures to one decimal place must not be taken to mean that the figures are thought to be significant to more than the nearest whole number.
 (5) Where necessary, figures published in previous issues of this GAZETTE have been revised to include changes having retrospective effect or reported belatedly.
 \* Actual averages of normal weekly hours at the base date (July 31, 1972) are shown in brackets

in brackets. † In general males under 21 years of age and females under 18 years of age

Notes: (1) If comparisons are made between the indices for different industry groups, it should be remembered that the indices for a particular group may have been affected by the incidence of changes in rates of wages or hours of work in the months immediately before the base date (July 31, 1972). In addition, there is a considerable

### WAGE RATES AND HOURS Indices of basic weekly and hourly rates of wages and normal weekly hours: industrial analysis: all manual workers: United Kingdom

variation in the provisions of collective agreements, and there is, therefore, no common pattern for the calculation of the indices for the different industry groups. The industry groups are analysed according to the Standard Industrial Classification 1968.
(2) Where necessary, figures published in previous issues of this GAZETTE have been revised to include changes having retrospective effect, or reported belatedly.

### **RETAIL PRICES**

### United Kingdom: general\* index of retail prices

TABLE 132

		ALL	FOOD†								Second State	All items except
		11 2113	All	Items the prices of	All items other than	Items main the United	ly manufact Kingdom	ured in	Items mainly	Items mainly	All items except	items of food the
				which show significant seasonal variations	those the prices of which show significant seasonal variations	Primarily from home- produced raw materials	Primarily from imported raw materials	All	home- produced for direct consump- tion	imported for direct consump- tion	food	prices of which show significant seasonal variations

Advisory Committee) recommended in 1962 that until a satisfactory index series based on actual prices became available half the expenditure on meals out should continue to be allocated to the food group and the other half spread proportionately over all groups, including the food group. The index for meals out for January 16, 1968 implicit in this has been available and indices in this series have been linked with the implicit index for meals out for January 16, 1968 to obtain indices for meals out with January 16, 1962 taken as 100.

\* See footnote on page 834. † The items included in the various sub-divisions are given on page 644 of the August 1968 issue of this GAZETTE.

The statistics relate to stoppages of work due to disputes connected with terms and conditions of employment. They exclude stoppages involving fewer than ten workers and those which lasted less than one day, except any in which the aggregate number of working days lost exceeded 100. The figures for 1974 are provisional and subject to revision.
 † Figures of stoppages known to have been official are compiled in arrear and this table does not include those for the last three months.
 ‡ Workers directly and indirectly involved at the establishments where the stoppages occurred are excluded. Workers involved in stoppages beginning in one month and continuing into later months are counted, in cols. (5) and (6), in the month

in which they first participated (including workers involved for the first time in stoppages which began in an earlier month), and in col. (7), in each month in which they were involved. § Loss of time, for example through shortages of material, which may be caused at other establishments is excluded. The analysis by industry prior to 1970 is based on the Standard Industrial Classification 1958 and from 1970 on the Standard Industrial Classification 1968. || Figures exclude workers becoming involved after the end of the year in which the stoppage began. ¶ Figures for stoppages in coal mining, other than for the national stoppage of 10 February - 8 March 1974, are not available for the period December 1973-March 1974.

SEPTEMBER 1974 DEPARTMENT OF EMPLOYMENT GAZETTE 877

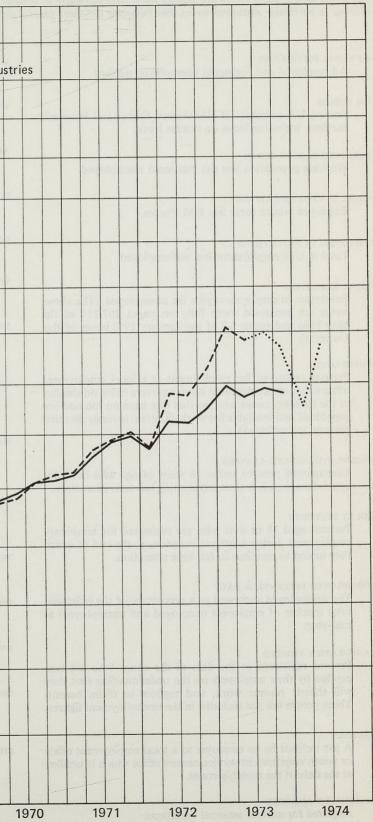

OUTPUT PER HEAD AND LABOUR COSTS Indices of output, employment and output per person employed and of costs per unit of output: quarterly (seasonally adjusted)

*Note:* This series was introduced in an article on pages 801-806 of the October 1968 issue of this GAZETTE and revised in September 1973 using 1970 as the base year.

## Output per person employed (1970=100): Seasonally adjusted.

#### DEFINITIONS

The terms used in these tables are defined more fully elsewhere in articles in this GAZETTE relating to particular statistical series. The following are short general definitions.

WORKING POPULATION

EMPLOYED LABOUR FORCE

All employed and registered unemployed persons.

MEN Males aged 18 years and over, except where otherwise stated.

HM FORCES

Serving UK members of HM Armed Forces and Women's Services, including those on release leave.

Working population less the registered unemployed.

ADULTS

WOMEN

Men and women.

TOTAL IN CIVIL EMPLOYMENT Employed labour force less HM Forces.

EMPLOYEES IN EMPLOYMENT Total in civil employment less self-employed.

TOTAL EMPLOYEES

Employees in employment plus the unemployed. (The above terms are explained more fully on pages 207-214 of the May 1966 and pages 5-7 of the January 1973 issues of this GAZETTE).

UNEMPLOYED

Persons registered for employment at a local employment office or youth employment service careers office on the day of the monthly count who on that day have no job and are capable of and available for work. (Certain severely disabled persons are excluded).

#### UNEMPLOYED SCHOOL-LEAVERS

Unemployed persons under 18 years of age who have not entered employment since terminating full-time education.

ADULT STUDENTS

Persons aged 18 or over who are registered for temporary employment during a current vacation, at the end of which they intend to continue in full-time education.

UNEMPLOYED PERCENTAGE RATE

The unemployed expressed as a percentage of the estimated total number of employees (employed and unemployed) at mid-year.

#### TEMPORARILY STOPPED

Persons registered at the date of the count who are suspended by their employers on the understanding that they will shortly resume work, and register to claim benefit. These people are not included in the unemployment figures.

VACANCY

A job notified by an employer to a local employment office or youth employment service careers office which is unfilled at the date of the monthly count.

SEASONALLY ADJUSTED

Adjusted for normal seasonal variations.

Printed in England for Her Majesty's Stationery Office by The Garden City Press Limited, Letchworth, Hertfordshire SG6 1JS

Dd 504690 K88 9/74

BOYS Males under 18 years of age, except where otherwise stated.

GIRLS

Females under 18 years of age.

Females aged 18 years and over.

YOUNG PERSONS Boys and girls.

#### YOUTHS

Males aged 18–20 years (used where men means males aged 21 and over).

OPERATIVES

Employees, other than administrative, technical and clerical employees in manufacturing industries.

MANUAL WORKERS

Employees, other than administrative and clerical employees, in industries covered by earnings enquiries.

PART-TIME WORKERS

Persons normally working for not more than 30 hours a week except where otherwise stated.

NORMAL WEEKLY HOURS

Recognised weekly hours fixed in collective agreements, etc.

WEEKLY HOURS WORKED Actual hours worked during the week.

OVERTIME

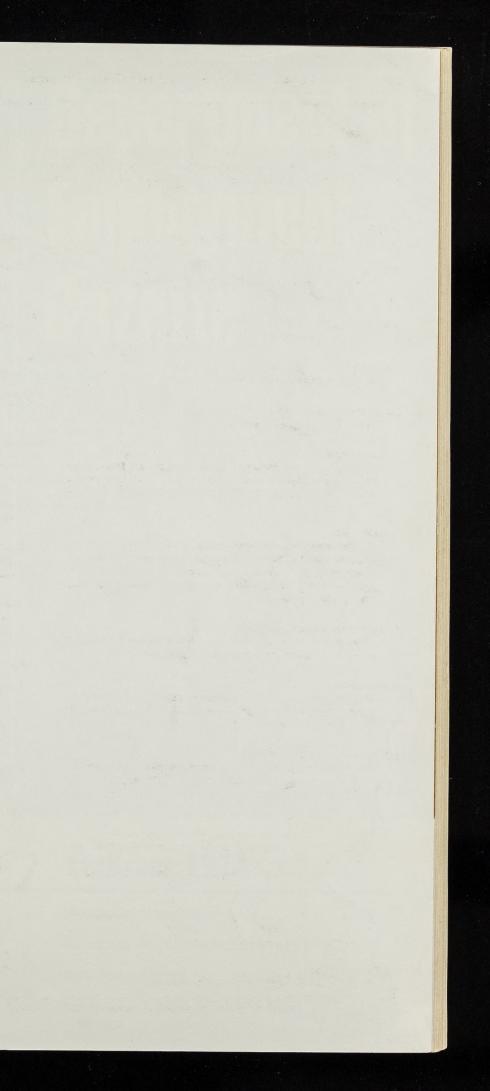

Work outside normal hours.

SHORT-TIME WORKING

Arrangements made by an employer for working less than normal hours.

STOPPAGES OF WORK—INDUSTRIAL DISPUTES

Stoppages of work due to disputes connected with terms and conditions of labour, excluding those involving fewer than 10 workers and those which last for less than one day, except any in which the aggregate number of man-days lost exceeded 100.
