Matters of Life and Death

A popular review of the trend of population and of the incidence of sickness as recorded in the records of the General Register Office.

The booklet describes the growth of the population of England and Wales from the estimated $1\frac{1}{2}$ millions of Doomsday Book to the 43 millions today and the volume and rate of births, marriages, deaths and migration that have been the background of that growth. It also sketches the advances in the nation's health which have been both recorded and assisted by medical statistics derived over a hundred years from the analysis of the causes of death and the notification of infectious diseases, and refers to the more modern developments in morbidity statistics.

"... just the right measure of statistical illustration to help, and never impede, a straightforward account of the population history of the last century . . ."

—*Manchester Guardian*.

"... a short simple statement of the main facts about life, death, health and disease . . . stimulating reading . . . and handy for reference."—*Lancet*.

Explanatory Notes

1. New or Recent Changes in Presentation

(a) Arising from War Conditions

Estimates of total population are not available for Regions or Local Government divisions of the country (see Section 2 below).

Tables U and V are omitted owing to the suspension of the revision of Electoral Registers.

Certain regional analyses of the fertility data (Tables FF, LL, NN, TT and UU) have been suspended.

(b) Change of Practice

The births recorded and analysed in the Statistical Review in respect of the year or other period after the 1st January, 1941, are those which *occurred* during the period and not those *registered* as has been the practice hitherto. (See Sections 3 & 4 below.)

Table QQ is extended to show, (a) first maternities of *present* marriage, in addition to (b) first maternities of *all* marriages. Table RR shows first maternities of *present* marriage corresponding to part (a) of Table QQ.

2. Populations

The 1943 estimate of the total population of England and Wales shown in Table A includes members of its Armed Forces and Merchant Marine at home and overseas; it excludes the Armed Forces of Dominions, Colonies and Foreign countries temporarily present in the country. For years prior to 1940 the figures exclude Armed Forces and Merchant Seamen absent from the country approximating to 180 thousands in recent pre-war years. The national total cannot be apportioned amongst areas within the country.

The national and local estimates of civilian resident populations (Table E) are derived from the National Register enumeration of 29th September, 1939, after allowance for subsequent births, civilian deaths, migration and net intakes into the Armed Forces obtained from the National Register and other sources of information.

3. Births

Owing to the considerable time lag between the occurrence and the registration of a birth and its variation under War conditions (from a peace time average of about a month to less than a fortnight at the present time), the births recorded and analysed in the Statistical Review in respect of the year or other periods after 1st January, 1941, are those occurring in the period instead of those registered as has been the practice hitherto. For the occurrences of the period 1st July, 1938 to 31st December, 1940, see tables YY in the Reviews for 1938 and 1939 and Tables EE and YY in the 1940 Review. The numbers registered in 1943 are shown in the footnote to Table B.

For the classification by regions and local areas (Table E), the births have been assigned to the home address or area of permanent residence as in previous years.

4. (a) Birth Rates

The national rates for 1943 shown in Tables C and D are obtained by relating birth occurrences to the *total* population, while the rates in Table E are based on birth occurrences and *civilian* populations (see Sections 2 and 3 above). For the country as a whole the ratio of estimated civilian population to total population is 0.8949 by which the live birth rates of Table E may be multiplied to produce rates approximately comparable with those of years prior to 1940.

(b) Fertility Analyses

The fertility tables AA to SS are based upon birth occurrences while the infertility analyses of Tables VV and WW together with Table XX continue to be based upon death registrations.

5. Marriage Rates

The national marriage rates of Tables C and D are based upon total populations while those of Table F are based upon civilian populations (see Section 2 above). For the country as a whole the ratio of estimated civilian population to total population is 0.8949 and the rates of Table F may be multiplied by this factor to produce rates approximately comparable with those of years prior to 1940.

6. Deaths

The deaths recorded (Tables E and VV to XX) are those registered in the period, the time lag between occurrence and registration being usually only a day or two. The said deaths are those of civilians only and are classified according to the area of residence of the deceased, the following conventions being adopted in the special circumstances (evacuation, industry transfers, etc.) of the war period, viz. (a) where a temporary address was recorded as well as a former permanent address the death was assigned to the area of the temporary address and (b) where the death occurred in a non-evacuation area (otherwise than in an institution) and only one address was recorded which was in an evacuation area the death was assigned to the non-evacuation area.

Civilian War Deaths identified in Table E (col. 13) are mainly those registered under the special emergency procedure applicable to deaths due to war operations.

7. Death Rates

The general death rates of Table E are civilian rates based upon civilian deaths and civilian populations. The Infant Mortality rates of Table E have hitherto been based upon the births registered in the period to which the deaths relate. Rates measured in this way, however, are imperfect in that no allowance is made for the circumstances (a) that births *registered* may be different from the numbers *occurring* in any period or (b) that infant deaths relate partly to births which occurred prior to the death registration period. The National Infant Mortality rate for 1943 has been calculated on the basis of the properly related births and the rates for local areas incorporate an allowance derived from the national experience, for the difference between registered and related births.

8. Changes in Boundaries

There were no changes in boundaries in 1943.

9. Significance Indication

Rates based upon less than 20 births or deaths are distinguished by italic type as a warning to the user that the smallness of the experience may affect its significance.

10. Regions

The constitution of the Regional Divisions of England and Wales used throughout the volume is as follows :—

| <i>Greater London</i> The area coincident with the City of London and Metropolitan Police Districts — approximately 15 miles' radius from Charing Cross. | <i>North I.</i> Durham. * These figures relate to passengers to and from ports in Eire and ports in the United Kingdom. The movement over the land frontier between Eire and Northern Ireland cannot be furnished.

+ The figures which appeared in this table in the Statistical Review, Pt. II, for the years 1939, 1940 and 1941 are not reproduced here because they may be liable to considerable error by reason of missing returns and other war-time difficulties.

(c) Balance of Permanent Migration : British subjects only (from Board of Trade Returns).

Outward balances are shown in Roman type, inward balances in Italics.

The United Kingdom excludes Eire as from the 1st April, 1923.

The criterion of Permanent Migration is a declared intention to reside for at least a year in the country of destination. The permanent migration of part (c) is included in the passenger movement of part (b).

TABLE AA. Maternities and Births of all Types, distinguishing legitimacy and, in the case of births, sex and whether live or still-born.

England and Wales
1943 Occurrences.

NOTE: The term "Maternity" is used to denote a pregnancy which has terminated in the birth of one or more live or still-born child(ren), the criterion of still-birth being that defined in the Births and Deaths Registration Act, 1926. The Maternity record differs from the Birth record in that multiple births from a single pregnancy are counted as one maternity while for the birth record each child born is reckoned as a separate unit.

TABLE EE. Annual Maternity and Birth Rates,
distinguishing Legitimacy and Type and in the
case of births, Sex and whether Live or Stillborn

England and Wales
1943 Occurrences.

Note.—In this table

- (a) Maternities and Births of Not Stated Mother's age have been rateably distributed over identified age groups.
- (b) Maternities and Births in respect of Mothers aged under 15 and 50 and over have been included in the age groups 15-19 and 45-49 respectively, and in the aggregate group 15-49.
- (c) The Rates based upon less than 20 Maternities or Births are distinguished by *Italic* type as a warning to the user that the smallness of the experience may affect its significance.

TABLES TT and UU.—Suspended. See Explanatory notes 1(a) on page iv.

**Table VV. Infertility of Deceased
Married Women distinguishing certain Causes**

**England and Wales
1943 Registrations.**

Note:—The columns distinguish deaths according to whether the deceased was reported

(a) as having had no children by any husband, i.e. Infertile.

(b) as having had children by a husband, i.e. Fertile.

Deaths in which the record of fertility was not reported are excluded from the table.

In view of the unreliability of inferences based upon small numbers, proportions based on less than 50 cases (Infertile plus Fertile) have been omitted, and proportions based on between 50 and 250 cases are shown in italics.
