Census of England and Wales 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and provide a limited range of statistics in respect of the newly constituted areas.

ENGLISH COUNTIES		MONMOUTH	
BEDFORD	Pt. I, 2s. (2s. 2d.) II, 9d. (10d.)	Pt. I, 3s. (3s. 2d.) II, 1s. (1s. 1d.)

TABLE E. POPULATION, BIRTHS, DEATHS AND INFANT MORTALITY, 1939. } { England and Wales, Regions, Counties, Boroughs, Urban Districts and Rural Districts.

NOTES.

Column 2: The estimates of resident populations at the middle of 1939 have been derived from the 1931 Census Returns in conjunction with the National Register of September 29th, 1939, and these populations are used for the calculation of birth rates in column 8. The composite populations used for the calculation of death rates in column 12, which allow for the exclusion of non-civilians on and after September 3rd and for evacuation movements due to war conditions, will be found in Table 29 Part I. (See note below re changes of boundary).

Columns 3-7: Live births are those registered during the calendar year and are classified according to the area of residence of the mother. The average time lag between occurrence and registration is usually about a month.

Columns 9-11: Deaths are those registered during the calendar year and are classified according to the area of residence of the deceased. Non-civilians are excluded on and after 3rd September, 1939, but included before that date. The time lag between occurrence and registration is usually only a day or two.

Columns 13-14: Mortality comparisons yielded by the crude death rates (col. 12) alone are vitiated by reason of the fact that the areal populations on which they are based may be of widely differing age constitutions. With a view to eliminating this element of variation, a comparability factor is provided in column 13 for each area and this, when multiplied by the crude death rate of the area, produces an adjusted death rate which may be regarded as comparable from a mortality point of view with the corresponding adjusted rate for any other area or with the crude death rate for England and Wales as a whole (where the comparability factor is unity). A guide to the relative incidence of mortality in different areas is provided by column 14 which expresses each local adjusted rate as a ratio of the national rate. For a fuller description of the Comparability Factor, reference should be made to the Text portion of the Statistical Review.

Column 16: Infant Mortality is calculated on numbers of births specially adjusted for the purpose as explained on page vi of Part I.

Columns 17-19: (Shown only for the Regional Summary on page 10); The rates of increase and decrease are in respect of the areas as constituted after all changes of boundaries which occurred during the year.

Regions: The constitution of the Regions is shown on page v.

With a view to maintaining continuity with the Divisions in use prior to 1931, two supplementary sub-divisions of the current South-East region are shown in this Table. The former Midland division corresponds to the aggregate of the current Midland and East and Midland section of the South-East Region: the former South (including London) corresponds to the current South-West and the Southern section of the South-East Region: North and Wales are identical in the two arrangements.

Changes in boundaries. Areas marked { * have been altered } during the year.
 { † „ „ created }
 { § „ „ abolished }

Unless otherwise indicated, statistics of areas created or abolished refer only to the portion of the year of their existence, while statistics of areas whose boundaries have been altered are composite figures combining the "before change" and "after change" position for the respective periods involved. The population of each area as constituted after change will be found in the Appendix to this volume (page 129), the populations shown in column 2 of this Table and of Table 29, Part I, being constructed figures appropriate for use with the partial or mixed records of births and deaths of the current year.

Standardization of Local Death Rates.—The A.C.F. shown for each area in col. 13, the use of which is explained in the above note on cols. 13-14, may be regarded as an index of the relationship of the estimated sex-age distribution of the local population as used for death-rates in 1939 to that of the corresponding total national population (as given in Table 1 Part I).

While the use of the A.C.F. alone suffices to standardize, for the purpose of valid comparison, the mortalities of different areas in the same period of time it does not suffice for the comparison of mortalities at different periods of time, either of the same or of different areas. For the latter purpose, an analogous time comparability factor (T.C.F.) must be introduced, so constructed as to eliminate the effect of sex-age changes in population taking place from time to time. For the country as a whole, such T.C.F.s are available from the ratios of standardized to crude death rates set out in Tables 3, Part I, and for recent years are as follows:—1929, .853; 1930, .838; 1931, .820; 1932, .808; 1933, .796; 1934, .790; 1935, .768; 1936, .759; 1937, .746; 1938, .736; 1939, .702. Upon the assumption of a similarity of temporal age trends in national and local populations, the national T.C.F.s for successive years can be used in conjunction with the A.C.F.s of local areas, the product of an A.C.F. and a T.C.F. yielding a combined comparability factor (C.C.F.) which, when multiplied by the crude death rate to which it applies, may be regarded as producing a standardized death rate comparable with the correspondingly treated crude death rate of any other place and time or with the national standardized rates shown in Table 3 of Part I. *Statistical Review.*

It is to be observed that the A.C.F.s and T.C.F.s now provided apply only to total mortalities from all causes. They are not appropriate for use with selected diseases or causes.

For a fuller description of the standardizing processes, reference should be made to the Text portion of the Statistical Review for 1934.

Rates based upon less than 20 births or deaths are distinguished by *italic* type as a warning to the user that the smallness of the experience may affect its significance.

TABLE E.

a A considerable proportion of the population of this area was enumerated in Mental Hospitals, the deaths in which are allocated to the areas in which the deceased patients had resided before admission.
† Populations appropriate for calculation of death rates are shown in Table 29, Part I.

TABLE E.I. STILLBIRTHS (LEGITIMATE AND ILLEGITIMATE) (WITH RATIO PER 1,000 TOTAL BIRTHS), 1939.

England and Wales, Geographical Regions* London and Metropolitan Boroughs, and County Boroughs. Aggregates of Urban and of Rural Districts in each Administrative County.

Note.—Stillbirths occurring away from home have been transferred to the area of usual residence of the mother.

Rates based upon less than 20 stillbirths are distinguished by *italic type* (see note to Table E page 9).

Area.	Legitimate.		Illegitimate.		Total.	Stillbirths per 1000 Total Births.

TABLE F.—MARRIAGES, 1939.

Note.—Registration divisions, which form the areal unit of classification for marriage records are in process of modification under the Local Government Act, 1929. Statistics are shown for entire Counties inclusive of their associated County Boroughs. The Registration County is co-extensive with the Administrative County (inclusive of associated County Boroughs) in all cases other than those marked*. Figures for individual County Boroughs are shown in *italics* where available. For constitution of Geographical Regions see page v.

1930	37,623	23,540	8,684	45,134	16,195
1931	42,711	35,249	5,693	42,299	90,703
1932	54,625	48,906	7,919	14,185	76,729
1933	26,682	28,839	7,207	14,070	47,959
1934	8,882	12,573	12,362	33,265	54,509
1935	7,421	11,101	17,029	29,713	54,163
1936	3,427	9,786	28,966	37,610	70,003
1937	8,831	4,033	31,184	33,745	56,098
1938	19,934	2,734	18,432	31,349	29,847
1939	37,598	10,728	15,825	111,234	57,811

* These figures relate to passengers to and from ports in Eire and ports in the United Kingdom. The movement over the land frontier between Eire and Northern Ireland cannot be furnished.

(c) Balance of Permanent Migration: British subjects only (from Board of Trade Returns).
Outward balances are shown in Roman type, inward balances in Italics.
The United Kingdom excludes Eire as from the 1st April, 1923.
The criterion of Permanent Migration is a declared intention to reside for at least a year in the country of destination. The permanent migration of part (c) is included in the passenger movement of part (b).

Period.	Between England and Wales and Non-European Countries.			Between the United Kingdom and Non-European Countries.		
	Persons.	Males.	Females.	Persons.	Males.	Females.

 (h) Decrease from Census of 1931.

TABLE AA.—Maternities and Births of all Types, distinguishing legitimacy and, in the case of births, sex and whether live or still-born.

NOTE: The term "Maternity" is used to denote a pregnancy which has terminated in the birth of one or more live or still-born child(ren), the criterion of still birth being that defined in the Births and Deaths Registration Act, 1926. The maternity record differs from the Birth record in that multiple births from a single pregnancy are counted as one maternity while for the birth record each child born is reckoned as a separate unit.

Age of Mother at Maternity.	MATERNITIES			BIRTHS (Legitimate and Illegitimate combined)			
	Total	Legitimate	Illegitimate	Live		Still.

Table OO. Legitimate Maternities distinguishing the Interval since Marriage.*

England and Wales
1939 Registrations.

*Note:—Interval since marriage. As the month only and not the day of the mother's marriage is obtained at a birth registration, the interval between marriage and birth of child has been calculated on the assumption that both events take place at the middle of month; and the true interval may accordingly be a month greater or less than the calculated interval. A group of intervals expressed in the table as "x—" consists of calculated intervals from x to one month less than the next expressed interval inclusive and the possible range of the true intervals included therein is greater than this range by one month at each end (e.g., the group 1—has a possible range from 11 months to 1 day less than 2 years and so on). The groups thus overlap to this extent though the records are not duplicated thereby.

Age of Mother at Maternity	Legitimate Maternities; the Interval since Marriage (in years) being															All stated intervals

TABLE SS. Legitimate Maternities distinguishing Interval since Marriage and Total previous children (surviving, dead or stillborn) by Present Husband.

Note: Statements of numbers of children which were incompatible with the interval since marriage were not questioned and are recorded without modification. Such children, if incorrectly stated, were presumably illegitimate or offspring of a previous marriage. See also note to Table OO.

Interval since Marriage	Legitimate Maternities; the number of previous children (surviving, dead or stillborn) by present husband being													Previous children (excluding not stated cases)

Table TT. Infertility of Deceased Married Women. } England and Wales and Regions. 1939 Registrations.

Note:—The columns distinguish the deaths according to whether the deceased was reported (a) as having had no children by any husband. i.e., Infertile. (b) as having had children by a husband. i.e., Fertile. (c) without statement as to children. i.e., Not stated. In view of the unreliability of inferences based upon small numbers, proportions based on less than 50 cases (Infertile plus Fertile) have been omitted and proportions based on between 50 and 250 cases are shown in italics.

Age of Woman at death	Deceased Married Women			Infertile per 1,000 stated	Age of Woman at death	Deceased Married Women			Infertile per 1,000 stated	Age of Woman at death	Deceased Married Women			Infertile per 1,000 stated
	Infertile	Fertile	Not stated			Infertile	Fertile	Not stated			Infertile	Fertile	Not stated

APPENDIX.—Changes in Boundaries, Names, etc., of Counties, Boroughs, Urban Districts and Rural Districts.

(i) Authorities for changes (the date of operation, except where indicated, was 1st April, 1939).

(M. of H. means Ministry of Health).

REFERENCE.	DESCRIPTION OF AUTHORITY.
(a)	M. of H. Provisional Order Confirmation (Luton Extension) Act, 1939.
(b)	M. of H. Order No. 100212. The County of Chester (Hazel Grove and Bramhall Urban District Extension) Confirmation Order, 1939.
(c)	The Plymouth Extension Act, 1938.
(d)	M. of H. Order No. 98241. The County of Leicester and the City and County Borough of Leicester (alteration of Boundaries) Order, 1938.
(e)	M. of H. Order No. 100378. The County of Northampton (Corby Urban District) Confirmation Order, 1939.
(f)	M. of H. Order No. 100248. The County of York, West Riding Review Order, 1939.

(ii) Particulars of Changes.

The names of Areas appearing more than once in columns 2 and 3 are marked †.

Reference to Authority.	Boroughs, U.D.'s or R.D.'s affected by change.		Particulars of area transferred.			
	Area diminished (or extinguished*).	Area enlarged (or created†).	Name and description (in use prior to change).	Acreage (Land and Inland Water).	Census Population.
