EXPLANATORY NOTES

1. Changes in presentation

Table BB. Omitted.

Table GG. Revised to include details previously shown in Table BB.

2. Additional tables and data

The following unpublished items are available for reference at the Office of Population Censuses and Surveys, or copies can be supplied on payment:-

(i) Live births and stillbirths separately by sex, legitimacy and month of occurrence for each region, conurbation and local authority area in England and Wales.

(ii) Live births and stillbirths separately by place of confinement, age and parity of mother for each county borough and administrative county in England and Wales.

3. Populations

The estimates of population appearing in this volume and described as 'home', 'total' or 'civilian' have the following content:

Home population - the population, of all types, actually in England and Wales, distributed by area according to residence.

Total population - the home population plus members of H.M. Forces belonging to England and Wales and serving overseas but minus the Forces of other countries temporarily in England and Wales.

Civilian population - the total population minus members of H.M. Forces belonging to England and Wales at home or overseas.

In order not to count either deployment of H.M. Forces between home and overseas stations, or their recruitment or demobilisation, as migration, each intercensal national population estimate starts with the *total* population at the date of the previous estimate. To this is added natural increase and the net result of migration into and out of the civilian population (which may differ slightly from the balance of intending migrants derived from the International Passenger Survey, etc.). This gives the new *total* population. The subtraction from this of all of H.M. Forces regarded as emanating from England and Wales, wherever stationed, gives the new *civilian* population estimate. The addition of non-civilians (whether H.M. Forces or Allied Forces) actually stationed in England and Wales gives the new *home* population estimate. A minor difficulty in equating the difference between two *total* population estimates minus the net result of subtracting births from deaths with the precise figure for net migration during the period arises from the fact that provisional figures for births are used at the time population estimates are necessarily made, whereas published figures are usually of actual occurrences. Discrepancies between provisional birth figures and final occurrences are generally allowed for in the estimates for the following year.

4. Births and birth rates

The births recorded and analysed for England and Wales for periods from 1939 onwards are those which occurred during the period.

For classification by area (Tables E, GG, etc.), births and maternities are assigned to the area of the mother's usual residence if this is within England and Wales; if not, to the area of occurrence.

National crude birth rates shown in Tables D1, D2 are calculated by relating birth occurrences (registrations before 1939) to the population of persons, all ages. Home population has been used in all years except 1915 to 1920 and 1940 to 1950 when total population was used. National birth rates per 1,000 women of childbearing ages (from 15

to 44 years of age) are based on total population throughout. The rates in Table E are calculated from birth occurrences and home populations (see note 3 above).

5. Deaths and death rates

The deaths recorded (Tables E and SS) are the total registered (including non-civilians) in the calendar period, the time lag between the date of occurrence and the date of registration being usually only a day or two. In general, deaths have been assigned to the area of usual residence of the deceased; if this is not within England or Wales they are assigned to the area of occurrence. Accommodation provided under Parts III or IV of the National Assistance Act, 1948, is regarded as the place of residence of persons dying there. Before 1 January 1958 chronic sick and psychiatric hospitals were similarly treated for this purpose but from that date the method of classification was modified, the main change being that a death in such a hospital is now assigned to the area of occurrence only if the deceased had been there six months or more. If the deceased had been there less than six months the death is transferred to the area of previous usual residence.

In some small areas the numbers of deaths may also have been appreciably affected by the opening, closing or change of use of certain institutions, so that figures may not be comparable with those of earlier years.

In Table E the crude death rates are calculated from total deaths and home populations. The infant mortality rates are based on the live births occurring in the year, and the perinatal mortality rates are calculated from the numbers of infant deaths under one week, plus the numbers of stillbirths, per thousand total live and stillbirths.

6. Area Comparability factors

(a) Births

The crude birth rates for local areas in Table E (col. 8) may not be comparable one with another because the populations on which they are based may contain different proportions of women of child-bearing ages. In order to eliminate differences between local birth rates due to this cause a standardising factor, termed an Area Comparability Factor, is calculated (as described on page 144 of the 1965 *Statistical Review, Part III, Commentary*).

The product of the crude birth rate and this Area Comparability Factor (col. 9 of Table E) is a rate which makes allowance for this influence. The ratio of this adjusted rate to the rate for England and Wales as a whole is shown in col. 10 of Table E.

(b) Deaths

The crude death rates for local areas in Table E (col. 14) may not be comparable one with another. In the first place, the population on which they are based may have widely differing structures by sex and age. In order to eliminate differences between local death rates due to this cause a standardising factor, termed an Area Comparability Factor, is calculated (as described on page 144 of the 1965 *Statistical Review, Part III, Commentary*). In the second place the populations on which the crude death rates are based may include a disproportionate number of invalids if there are certain types of hospitals in the area. In order to eliminate this difference the Area Comparability Factors are adjusted so that they have the effect of apportioning the deaths and the populations in chronic sick and psychiatric hospitals over all areas of the country according to their non-institutional populations. The product of the crude death rate and this Area Comparability Factor (col. 15 in Table E) is a rate which makes allowance for these two influences. The ratio of this adjusted rate to the rate for England and Wales as a whole is shown in col. 16 of Table E.

7. Fertility Analyses

All the tables that appear in the Fertility Analyses are based upon occurrences with the exception of Table SS which is based upon registrations.

One of the changes introduced by part of the Population (Statistics) Act, 1960, which came into operation on 1 January 1961, was that the age of the child's father was required where his name was entered in the register, i.e. where the entry was that of a legitimate birth or of an illegitimate birth registered on the joint information

of the parents. The analysis of illegitimate births by father's age in Table AA(b), being thus restricted to those births registered jointly by the parents where the father's age was stated, is therefore incomplete and may be misrepresentative.

The term 'maternity' in these tables is used to denote a pregnancy which has terminated in the birth of one or more live or still born children, and the term 'paternity' a legitimate pregnancy of the man's wife which has terminated in the birth of one or more live or still born children. The maternity record differs from the birth record in that multiple births from a single pregnancy are counted as one maternity, while for the birth record each child born is reckoned as a separate unit. The definition of a stillborn child is given in Section 41 of the Births and Deaths Registration Act, 1953, as follows: 'a child which has issued forth from its mother after the twenty eighth week of pregnancy and which did not at any time after being completely expelled from the mother breathe or show any other signs of life'.

The treatment of 'not stated' cases is explained in note 12.

The following supplementary tables, which were last published in the 1966 volume, are to be published at intervals of several years.

Table AA Supplement 1. Legitimate live births by ages of parents in combination.

Table AA Supplement 2. Legitimate stillbirths by ages of parents in combination.

Table FF Supplement. Legitimate stillbirths per 1,000 legitimate births by ages of parents in combination.

Table HH Supplement 1. Legitimate live births to remarried women by age of mother at birth and the number of her previous liveborn children by all husbands.

Table HH Supplement 2. Legitimate births to all married women by sex, age of mother at birth and the number of her previous liveborn children.

Table HH Supplement 3. Legitimate male births per 1,000 legitimate female births to all married women by age of mother at birth and the number of her previous liveborn children.

Table II Supplement 1. Legitimate live births to remarried women by age of mother at birth and duration of current marriage.

Table II Supplement 2. Legitimate live births to all married women by age of mother at birth and marriage duration.

Table MM Supplement. Legitimate live births to remarried women, at integral marriage durations (in completed years or months) by mother's calendar year of, and age at, current marriage.

8. Divorces

The figures in Table O1 have been obtained from the Lord Chancellor's Department. Tables P1 to P7 have been compiled from the records of the Divorce Registry, controlled to the total given by Table O1.

9. Register of electors

Table U1, compiled from returns received from Electoral Registration Officers, shows the numbers of parliamentary electors on the February 1970 Register for each parliamentary constituency as constituted at the date of the general election held on 31 March 1966. The number of votes cast at by-elections held on the February 1970 Register have been supplied by the Home Office. The 1961 acreages, which comprise land and inland water, for each parliamentary constituency, have been obtained from the Ordnance Survey Department.

Tables U2 and U3 are derived from Table U1 for the current and preceding years, so far as they relate to parliamentary electors.

Table V1, which shows the number of local government electors, the total number of councillors on each council, and an analysis of local elections held in 1970, is compiled from returns received from clerks to local councils. Table V2 is derived from the same source.

10. International migration

Tables S1, S2 and S3 show various data derived mainly from the International Passenger Survey, which is conducted by the Office of Population Censuses and Surveys for the Department of Trade and Industry and which obtains information about overseas migration, tourism and the contribution of 'travel' expenditure to the balance of payments. This survey is a stratified random sample of passengers entering and leaving the country on all the principal air and sea routes, *excluding* certain non-approved ports (e.g. Tyne sea ports, which mainly affect Scandinavia, and United States air bases in East Anglia) as well as traffic with the Irish Republic. The term 'migration' here relates to passengers whose declared intention is to reside in, or be away from, this country for at least a year.

On the long air routes nearly 7 per cent of the outgoing passengers and 4 per cent of the incoming passengers are interviewed at London Airport and Prestwick; 2 per cent of the short air route passengers in winter and 1 per cent in summer are also interviewed there. At the smaller airports the percentage sampled varies between half of one per cent and 4 per cent according to the time and the airport concerned. The sample weights are adjusted for known traffic densities, and appropriate allowance made for traffic not covered. In a two stage sample, cross-channel boats are sampled in proportion to the weight of traffic they are expected to handle, and a pre-determined number of passengers is interviewed on each selected boat. On the long sea routes, every liner or other ship having more than 200 passengers arriving, or more than 100 passengers departing, is covered. One ship in every two of other ships carrying more than 12 passengers on these routes is covered. Nearly 7 per cent of the outgoing and 4 per cent of the incoming passengers are sampled. A larger proportion of passengers leaving this country on the long sea and air routes is sampled in order to provide information about emigration from this country.

The totals obtained by grossing up the sample statistics are subject to sampling error which make the estimates for small categories unreliable.

11. International tables

Information for the completion of Tables W, X, Y and Z has been obtained from United Nations publications and from official sources.

12. 'Not stated' cases

Where a particular item of information on a record is not known or not stated at registration a specific value is assigned during the early stages of computer processing, as follows:

Births

Births for which the age of mother, age of father, year of marriage or the number of previous children is not stated are assigned the value of the appropriate item from the last case with otherwise similar characteristics to be processed. Notes of the number of cases dealt with in this way are included in the relevant tables.

Marriages

Marriages with the age of one of the parties not stated are assigned a value for that age based upon the other party's stated age, adjusted according to the combined marital condition of the parties. Where the ages of both parties are not stated, the values assigned are those appearing on the last of a sub-sample of previous cases with the same combined marital condition.

Divorces

Not stated age at marriage is assigned a value in a manner similar to marriages. Present age is estimated from age at marriage.

13. Changes in boundaries

Areas which have undergone a change in boundary during the year are identified in Table E by an asterisk *: for any such area the statistics shown for the current year represent the events assigned to the area within the boundaries as they existed at the date of the event, and the population given in Table E (col. 2), which is used for the calculation of crude birth and death rates, is a weighted average of the mid-year populations of the area as constituted before and after the change. This population figure may therefore differ from any given in Table A4 for the same region, conurbation, etc., which relates to the area as constituted at mid year. Newly created areas are identified in Table E by the sign †. Statistics of events occurring in the first quarter of 1970 for areas abolished on 1 April 1970 have been included with the areas to which they were transferred on 1 April 1970. Details of boundary changes are given in Appendix A.

14. Indication of reliability

Rates given as 0 indicate that the actual rate is less than half of a unit. A dash (-) in any cell indicates that there were no events. Where a cell has been left blank no denominator is available. Rates calculated from less than 20 events are distinguished by italic type as a warning to the user that the smallness of the experience may affect their reliability as a measure.

Numbers

If \bar{d} represents the deaths in an area and p the population in that area, then, if \bar{d}/p is small, the standard error (s.e.) of \bar{d} is approximately $\sqrt{\bar{d}}$ assuming that the deaths are independent of one another. Clearly, the larger the number of deaths the smaller will be the proportionate variability. A deviation either way of twice the s.e. may be expected about once in 20 times. Using this criterion one might expect towns each averaging 20 deaths per year to yield in the same year numbers ranging between 11 and 29 without such differences having any statistical significance. Alternatively it could be said that if 20 deaths were recorded for a town, this number would have a 95 per cent confidence interval of approximately +9, there being a 95 per cent chance that the underlying mortality is represented by a number of deaths within this interval.

If \bar{d} is thought to be an extreme variation it would be more reliable to use as the standard error not $\sqrt{\bar{d}}$ but $\sqrt{\bar{d}'}$ where \bar{d}' is the number of deaths expected if some standard rate (e.g. the national rate) were applied.

Rates

The appropriate standard error of a death rate when \bar{d} represents the number of deaths and p the population is

$$\frac{\sqrt{\bar{d}}}{p} \text{ or } \frac{m}{\sqrt{\bar{d}}}$$

where m is the death rate. The difference between two local death rates m_1 and m_2 can be regarded as significant only if it amounts to more than twice the standard error of the difference, viz.

$$2 \sqrt{\left(\frac{m_1^2}{\bar{d}_1} + \frac{m_2^2}{\bar{d}_2} \right)}$$

Comparison of adjusted rates

Before comparisons are made, other known sources of variation (such as differences in the sex and age composition of the population) must be removed. If C is the local death Area Comparability Factor, then mC is to be compared with m' , the national death rate. The s.e. of mC is

$$C \sqrt{\left(\frac{m}{P}\right)}$$

and

$$mC \pm 2C \sqrt{\left(\frac{m}{P}\right)}$$

is to be compared with m' . As already indicated, m' can be used instead of m in the calculation of the s.e.; m' has the advantage of itself having only a small sampling error.

15. Abbreviations

- A.C. - administrative county.
- C.B. - county borough.
- L.B. - London borough.
- M.B. - municipal borough.
- U.D. - urban district.

19. Urban and rural aggregates

These aggregates comprise (a) the six conurbations combined, (b) the aggregates of urban local authority areas outside the conurbations in three groups according to the size of their resident population at the 1961 Census and (c) the aggregate of rural local authority areas outside the conurbations. Urban areas include boroughs and urban districts as defined by the Local Government Acts, and rural areas are rural districts as similarly defined.

20. Sub-divisions of standard regions

The constitution of the sub-divisions of standard regions now in general use is as follows*:-

19. Hospital regions

The hospital regions presented in this volume consist of aggregations of entire local authority areas. They are identical with the areas of the regional hospital boards except where the boundaries of the latter divide local authority areas. Any such divided local authority area is allocated to the hospital region containing the greater proportion of the population.

Estimates of the population of hospital regions, in which the figures for the parts of divided areas have been allocated to the regions in which they are situated, have been published in the Registrar General's Quarterly Return (see return No. 490 for the second quarter of 1971).

TABLE A5. Total population, projections from 30th June, 1970, by sex and age

England and Wales

These projections have been prepared by the Government Actuary's Department in consultation with the Office of Population Censuses and Surveys

Basis: Mid-1970 estimate of the Total population of England and Wales (plus members of H.M. Forces belonging to England and Wales and serving overseas but minus the Forces of other countries temporarily in England and Wales).

Assumptions (1970 Revision):

Deaths: Death rates at the outset based on recent experience. At ages under 40 for males and under 50 for females death rates are assumed to decline over the period of the projection until, at the end of forty years, they are one half or less of the present rates. Above these ages the assumed rates of decline become progressively smaller as the age advances until they vanish at ages over 90. At almost all ages the assumed rates of decline are smaller for males than for females.

Births: The estimates assume 797,000 live births in the year to mid-1971 and a gradual increase thereafter to annual totals of 862,000 to mid-1976, 884,000 to mid-1981, 974,000 to mid-1991 and to 1,014,000 to mid-year 2001. The ratio of male to female births has been taken as 1.06 throughout.

Migration: A net inward migration has been assumed of 5,000 in the year to mid-1971, falling thereafter to zero in 1972-73. Thereafter, a net outward migration has been assumed rising to 4,000 in the year to mid-1977 and to 10,000 a year from mid-1981 onwards. These figures include migration to and from other parts of the United Kingdom as well as migration to and from all countries overseas.

Projections involving children not yet born are shown above the dotted line

TABLE B1. Abridged life table, 1970

England and Wales

Apart from its use as a basis for calculations of probabilities of death or survival, the life table represents one useful way of providing summary indices of mortality free from peculiarities in the sex and age structure of the population. These summary indices, whether it be the number surviving out of the specified number of births or the expectation of life beyond a specified age, are sex and age standardised. They summarise the individual age death rates for each sex. For this particular purpose the following life table has been constructed from the mortality experience of 1970. Though the functions are summary indices of the mortality of a particular year they will by the same token be sensitive to fluctuations in mortality from one year to another as a result of changes in the weather conditions, irregular incidence of epidemics, etc., and they are not reliable as a basis for calculations of the probabilities of survival over a period of years. Life table functions for use in such computations should be representative of the current level of mortality and should therefore be based on more than one year's experience. For this latter purpose another life table has been constructed based on the three years 1968 to 1970, a larger body of data more representative of the general mortality of recent years; this has been published in the Registrar General's Quarterly Return for the June Quarter, 1971 No. 490.

This abridged life table is constructed from the estimated home population and the total deaths in the year 1970.

The column headed l_x shows, for each sex, the numbers who would survive to exact age x out of 10,000 born who were subject throughout their lives to the recorded age death rates of the period.

Column 0e_x is the 'expectation of life', that is, the average future lifetime which would be lived by persons aged exactly x , if likewise subject to those death rates.

TABLE M. Persons marrying in 1970, ages and conditions

England and Wales, standard regions,
Wales and conurbations

Note. Figures for conurbations, remainders of regions and some standard regions are approximate, relating to groups of registration districts most nearly corresponding to the areas defined in the explanatory notes. The mid-1970 home populations of these groups differed from those of the defined areas by the following percentages:-

Tyneside conurbation	+7.65	South East Lancs conurbation	+3.98	Remainder of South East	-3.71
Remainder of North	-2.53	Merseyside conurbation	-7.48	Outer Metropolitan Area	+1.12
West Yorkshire conurbation	+4.78	Remainder of North West	+ .09	South West	-2.78
Remainder of Yorks and Humberside	-2.67	South East	- .60

Notes

- Tables S3 (b) and (c) relate to civilian migrant movement as an element in change in the 'total' population of the United Kingdom/England and Wales. Deployment of H.M. and Allied Forces between this country and overseas is excluded. Also excluded is a small number of wives and dependants of U.S. Forces entering or leaving the United Kingdom/England and Wales each year by 'non-approved' ports.
- A migrant is defined as a passenger with a minimum of twelve months' residence in his or her last country of residence who remains for at least a year in the receiving country. The figures of both inward and outward movements therefore cover a number of people spending a limited time in or out of the United Kingdom, e.g. students, doctors, teachers, as well as those moving in or out for permanent settlement. This group will also be reflected in the England and Wales net figures.
- The estimates of the Alien, Commonwealth and British (U.K.) streams relate to citizenship and are based on the International Passenger Survey, a sample survey of passenger movements between the United Kingdom and overseas countries, but excluding traffic with the Irish Republic, adjusted in the light of other available information such as the statistics collected under the Commonwealth Immigrants Act. Estimates of movement between the Irish Republic and the United Kingdom/England and Wales, which is not measured by the I.P.S. have been derived from data from National Insurance records. The net movement into England and Wales from the rest of the United Kingdom is derived from the records of change of doctor kept at the National Health Service Central Registers.
- United Kingdom passport holders from East Africa are included in the 'New' Commonwealth stream for the years mid-1967/1968 to mid-1969/1970.
- 'Old' Commonwealth relates to Australia, Canada and New Zealand; 'New' Commonwealth to the remaining Commonwealth countries.

† Provisional Adoption Orders, which were introduced on 1 April 1959 (see Adoption Act, 1958, section 53) are included in the total. These Orders confer authority on a person not domiciled in Great Britain to take a child out of this country for adoption.
* The number of adopted children usually exceeds the number of Adoption Orders because the High Court does not issue a separate Order for each child where an adopter adopts more than one child at the same time.

TABLE U1. Parliamentary electors on the February 1970 Register, with number of votes cast at by-elections held thereon

England and Wales, county and borough constituencies

Note 1. The Register of electors 1970 was prepared in respect of the qualifying date 10th October 1969, and came into force on 16th February 1970. The figures are for constituencies as constituted at the date of the General Election held on 18th June 1970. The figures given in columns 6, 7 and 8 relate to persons attaining the age of 18 years after 16th February 1970, and before 16th February 1971, and entitled to vote at elections held on or after their 18th birthday; they are not included in columns 3, 4 and 5.

2. Although Peers of the Realm (with certain exceptions) are not entitled to vote at Parliamentary Elections, their number is included in this table.

¹ Home population.

² Last published census. From the post enumeration surveys carried out in England and Wales, it is estimated that the population was under-enumerated by between 1 and 1.8 per cent.

³ Last published census. From the post enumeration survey carried out in Scotland, it is estimated that the population was under-enumerated by less than 0.5 per cent.

⁴ First estimate to take into account the critical evaluation of the 1966 sample census.

⁵ Believed to be over-enumerated.

⁶ African population only. Census of non-African population, taken 20 March 1969, gave total of 252,414.

⁷ Census result excludes, and estimates include, adjustment for under-enumeration estimated at 5 per cent.

⁸ Population is de jure.

⁹ Census result excludes, and estimates include, adjustment for under-enumeration.

¹⁰ Excluding Jammu and Kashmir, the final status of which has not yet been determined, population of the Indian-held part of the territory numbered 3,560,976 at the 1961 census and was estimated at 3,729,000 at mid-year 1964. Excluding also Sikkim.

¹¹ Including an estimate of 626,667 for Goa, Daman and Diu.

¹² Including Jammu and Kashmir, the final status of which has not yet been determined.

¹³ Excludes transients afloat.

¹⁴ Excluding Jammu and Kashmir, the final status of which has not yet been determined, population of the Indian-held part of the territory numbered 3,560,976 at the 1961 census and was estimated at 3,729,000 at mid-year 1964. Also excluded are Junagardh, Manavadar, Gilgit and Baltistan. Census data probably exclude also a considerable number of nomads. Census result and estimates exclude adjustment for under-enumeration.

¹⁵ Latest official estimate based on Planning Commission's adjustment for under-enumeration in census is 125,050,000 as at 1 January 1969.

¹⁶ Population excludes armed forces stationed outside country numbering 48,106 in May 1959. Census result excludes persons describing themselves as being more than 50 per cent Aboriginal or simply as 'Aboriginal'; estimates include these persons.

¹⁷ Population excludes diplomatic personnel and armed forces stationed outside country, the latter numbering 1,936 at 1966 census; also excluding alien armed forces within the country.

TABLE Y. World population and natural increase in certain countries

Note. The estimated total world population and continental totals are simply aggregates, rounded to millions, of the estimates for each country. In general, areas having populations of under one million are included under the heading 'Others'.

* In calculating these rates the few live births to women whose stated age and marriage duration implied an age at marriage below the legal minimum of 16 have been excluded.
 † Legitimate maternity rates.

TABLE MM. Legitimate live births to women married once only, at integral marriage durations (in completed years or months)* by mother's calendar year of marriage, age at marriage, and the number of her previous liveborn children, 1969-70

Note. Cases in which the mother's age, year of marriage or number of previous children were not stated have been included with the stated cases (for method of distribution see explanatory notes).

TABLE QQ(d). Fertility rates by birth order: live births per women married once only by duration and calendar year of marriage and number of previous liveborn children

England and Wales

Notes. This table shows rates which are, in fact, probabilities that a married woman, at a given marriage duration, with n previous live born children would have the $(n + 1)$ th child during the course of the following year. The rates are obtained as follows:

Suppose the number of legitimate live births after n previous births at a given marriage duration in a given year is denoted by M , and the number of married women at that marriage duration in that year is denoted by W . Suppose further, the number of those among W married women who have had n children is denoted by $W(n)$. Then the birth order rate is given by

$$\frac{M}{W} \div \frac{W(n)}{W} = \frac{M}{W(n)}$$

There is a possible source of error in calculating these rates, which arises from the possibility of having more births of a given order taking place than there are women exposed to the risk of having births of that order. This can happen when some women have more than one maternity (resulting in live born children) in any one year and when there is a multiple maternity resulting in more than one live birth. The chance of this error occurring is less than 1 in 20.

Calculation of women at risk: For women married before 1961, the number at each parity was obtained from the 1961 Census results. For those married in 1961 and onwards, the number at each parity was determined by distributing the estimated total number of married women at duration 0 (obtained from **Table NN**) according to the proportions given in **Table QQ(c)**.

Life Tables

The tables are based on the mortality experience of England and Wales during the years 1960 to 1962 and on the 1961 Census of Population. In addition to the main tables for the country as a whole there are abridged life tables for England and Wales separately and for the Greater London Conurbation.

**Population Projections
1970-2010**

This volume presents population projections, based on the 1970 mid-year estimates, for the United Kingdom, Great Britain, England and Wales, Scotland and Northern Ireland, by sex and age; some marital condition projections are included. There is also a detailed discussion of all aspects of the projections, including the derivation of the assumptions, the method used, and the variations from earlier projections.
