Statistical Review, 1972: Supplement on Abortion

Table 1B, Page 3

Rates per 1,000 women 15-44 (residents) 1972 for 11.47 read 11.27

1. General

The Abortion Act 1967, which came into effect on 27th April 1968, permits termination of pregnancy by a registered medical practitioner subject to certain conditions. Regulations made under the Act (The Abortion Regulations 1968, Statutory Instrument 1968 No.390 as amended by 1969 No.636, in relation to England and Wales) require any such termination to be notified within seven days, in a form prescribed in Schedule 2 of the principal Regulations, to the Chief Medical Officer of the Department of Health and Social Security or to the Chief Medical Officer of the Welsh Office, according to where the termination takes place. By arrangement the Office of Population Censuses and Surveys undertakes the statistical processing and analysis of the notification forms. This supplement to the Registrar General's Statistical Review gives some statistics derived from them for England and Wales for 1973. The following paragraphs set out the background to these statistics and the definitions used in compiling them.

2. Conditions of the Act

A legally induced abortion must be

- (a) performed by a registered medical practitioner,
- (b) performed, except in emergency, in a National Health Service Hospital or in a place for the time being approved for the purpose of the Act,
- (c) certified by two registered medical practitioners as necessary on one or other of the grounds:

1. the continuance of the pregnancy would involve risk to the life of the pregnant woman greater than if the pregnancy were terminated
2. the continuance of the pregnancy would involve risk of injury to the physical or mental health of the pregnant woman greater than if the pregnancy were terminated
3. the continuance of the pregnancy would involve risk of injury to the physical or mental health of any existing children of the family greater than if the pregnancy were terminated
4. there is a substantial risk that if the child were born it would suffer from such physical or mental abnormalities as to be seriously handicapped

or in emergency, certified by the operating practitioner as immediately necessary-

5. to save the life of the pregnant woman, or
6. to prevent grave permanent injury to the physical or mental health of the pregnant woman.

The above numbering of the grounds for termination appears in the notification form itself, and is used for brevity in the tables. Combinations of grounds are not infrequently recorded, and the tabulations distinguish two such: 2 and 4 together, and 3 with any others (usually 2 and/or 4). Where ground 1 is stated with any other, the case is treated as ground 1.

The Act provides that in relation to grounds numbered above as 2 and 3 the certifying practitioner may take account of the pregnant woman's actual or reasonably foreseeable environment.

3. Scope of data

The figures in the main tables are derived from notification forms received during 1973 and up to the end of January 1974 relating to legally induced abortions which took place in England and Wales in 1973.

The relative categories of the *International Classification of Diseases, Injuries, and Causes of Death, 8th Revision (1965)* are those numbered 640 (abortion induced for medical indications) and 641 (abortion induced for other legal indications).

Tables 2, 4B, 5, 7-12, 14 and 16-22, being primarily of demographic rather than medical interest, exclude abortions of women whose usual residence was stated to be outside England and Wales. These are shown separately in **Table 15**.

4. Rates

Tables 2A and **B** give annual abortion rates for England and Wales as a whole and for standard regions according to the declared usual residence of the woman. The denominator is the estimated population of women in the age range 15-49 at mid 1973. Since population estimates by marital status do not distinguish separated women (included with married) while the abortion notification form distinguishes single, married, widowed, and divorced or separated women, abortion rates are given only for single and ever-married (married, widowed, divorced or separated). (See note 6). As population estimates by marital status for regions are not available, regional rates are age-specific only.

5. Category of premises

Except in emergency, abortion operations must be carried out in NHS hospitals, in certain approved Services' hospitals, or in other premises specifically approved by the Secretary of State. At the end of 1973 there were 57 such approved places and 13 approved Services' hospitals. In the tables these latter hospitals are included under the heading 'Other Places'.

In 1973 no operation was recorded as having been performed, as an emergency, in a place other than those in the three categories of premises mentioned.

6. Age and marital status

The notification form asks for the woman's date of birth and the age tabulated is that at the last birthday before the operation. The categories of marital status distinguished on the notification form are (a) single (b) married (c) widowed (d) divorced or separated. Except in **Tables 8, 14 and 15(ii)**, the relatively small categories (c) and (d) are combined for tabulation purposes. This classification differs from that used in compiling population estimates. (See note 4).

7. Parity

The form requires the number of the woman's previous (a) live births (b) stillbirths (c) abortions to be stated. In **Tables 7, 9 and 10** analysis is by the number of previous live births, and in **Tables 5 and 16C(i)** by the number of live births and stillbirths together. Answers under (c) are probably incomplete.

8. Previous abortion under the Act

A question on the form about the date of the last termination of pregnancy under the Act enables cases of previous therapeutic abortion since 27th April 1968, to be identified. These are shown in **Table 16C(iii)** by the woman's age and hospital region of residence.

9. Operation

Five main operative methods are listed on the form, with provision for specifying any other method. Where more than one is used, in **Tables 1A(v), 13 and 16C(iv)** the case is classified under the major operation.

10. Gestation period

The form provides for a statement of the date of the last menstrual period as well as the date of operation. In accordance with international convention the gestation period is calculated as the number of completed weeks between these two dates. Where the l.m.p. is stated vaguely, for example as in 'early April' or 'third week in June', a guessed single date is inserted, such as the 7th April and 22nd June. When no date is stated for a case it is included in the 'not stated' category.

11. Duration of stay

Duration of stay in hospital or approved place is tabulated as the interval in days between date of admission and date of discharge (the latter actual or expected). An interval of 0 days means admission and discharge on the same date. As notification forms should be completed and forwarded within seven days of operation, the tabulated durations are limited at the upper end to '7 days and over'. A date of discharge was not stated and could not be inferred in 6% of cases resident in England and Wales.

12. Region of operation

Hospitals and approved places are classified to the hospital region in which they are situated, except that London teaching hospitals are shown as a separate group. The composition of hospital regions in terms of entire local government areas is set out in the Registrar General's Statistical Review from year to year, e.g. the 1972 volume, Part II, pages xxxi-xxxiv.

13. Area of residence

Tables 2, 15, 16, 17 and 18 are derived from the statement of the woman's usual address. In so far as temporary residence in England and Wales may sometimes be stated, instead of the true usual residence, figures in **Table 15** may be incomplete. **Table 17** is limited to standard regions, hospital regions, conurbations, aggregates of types of area and local government areas with a resident population of 100,000 and over. Figures for smaller areas are not provided in the interests of preserving confidentiality.

The composition of standard regions and conurbations is set out in the Registrar General's Statistical Review from year to year, e.g. the 1972 volume, Part II, pages xv-xxx.

14. Sterilisation

Tables 4B, 10 and 11B provide analyses of cases where sterilisation accompanied the abortion operation, and **Tables 16B and 16C(vi)** give some additional figures for regions. Where no answer was provided to the question, it was assumed that sterilisation was not performed unless the nature of the operation implied the opposite; all women who were stated to have had hysterectomy have been counted among those sterilised.

15. Occupation

The form asks for the woman's occupation, or that of her husband if she is married. Unfortunately, the information provided under this heading is often incomplete or too vague or general to permit satisfactory classification. However, in view of the sociological interest, an attempt has been made to analyse the data in terms of groups of occupations, whether of the woman or her husband, which correspond (to some extent) with conventional social classes used in various of the Registrar General's publications. Since, however, assessment of job status is not always possible, the classification is not strictly that of social class. These groups of occupations, presented in **Tables 8, 9, 10, 11, 18, 20 and 21** are:

Professional: e.g. doctors, architects, lecturers.

Intermediate: e.g. nurses, sales managers, entertainers.

Skilled: e.g. secretaries, salesmen, hairdressers.

Semi-skilled: e.g. waitresses, farm workers, telephonists.

Unskilled: e.g. kitchen hands, dock labourers, window cleaners.

Not classified: e.g. students, housewives, members of the Armed Forces, occupations inadequately described or not stated, unemployed.

16. Existing children

Tables 11A and B analyse the data according to the number of existing children living in the woman's family. These are defined on the form as a woman's natural children and any adopted, foster or step-children up to the age of 16 years living with her.

17. Medical grounds

Questions 11(a) and (b) on the notification form ask about the medical condition of the woman in terms of any obstetric or non-obstetric disease found or reported and any suspected medical condition of the foetus. The answers are coded according to the *International Classification of Diseases, Injuries and Causes of Death, 8th Revision (1965)*, slightly adapted to the context of abortions. In particular, Category 307 (Transient situational disturbances) is used as a residual group and includes general and miscellaneous terms and vague references to the mental state of the pregnant woman, e.g. mental health (risk to), mental illness (risk of), attempted suicide or tendency to suicide. Also included are disorders not specified as psychotic associated with other or unspecified physical conditions, which would otherwise be included in ICD 309.9. Two codes outside the range of the ICD 649 and 669, have been added to accommodate certain reported conditions, as described in **Table 19**. The large variety of medical conditions reported are aggregated into significant groups of the International Classification (ICD) code numbers and presented in **Table 19**. This shows numbers of conditions and not numbers of cases.

18. Environmental and other conditions (non-medical)

Question 11(c) on the notification form asks about non-medical grounds for termination, pursuant to the statutory provision that certifying practitioners may take account of 'the pregnant woman's actual or reasonably foreseeable environment' in relation to statutory grounds 2 and 3. Apart from some cases where question 11(c) was mistakenly answered by a reference back to the statutory grounds already stated, thirty one per cent (34,360) of all cases included some information about social conditions. These were cited in most cases in addition to medical reasons. The reasons, as the practitioner has seen fit to record them, have been classified to broad social groupings which have been used in the analysis shown in **Table 12**. Where more than one condition was stated an arbitrary order of priority was used for selecting the condition to be tabulated.

19. Complications or death

The question under this heading relates to the occurrence of complications or death prior to notification of an abortion. Notification should be made within seven days and the notifying doctor may not hear of complications or death occurring after the patient has been discharged from the place of operation. Data available from answers to this question will, from time to time, be analysed and discussed and published in medical journals.

Deaths recorded on the forms totalled 6, including two women who were not normally resident in England or Wales. On reference to the death certificate in each case it was found that the certifying practitioner or coroner had not necessarily attributed cause of death to the abortion operation but sometimes to the illness which was considered the underlying cause of death. Of the 4 deaths of resident women, in 2 cases abortion was shown to be the underlying cause, whilst in the remaining 2, death was attributed to other conditions. The method of operation, period of gestation and age at death are presented in **Table 22**.

On certification of cause of death see page viii.
Bracketed figures indicate that sterilisation was also performed in these cases.
There were also 2 deaths of non-resident women.

* For definition of gestation weeks see page vi.

OFFICE OF POPULATION
CENSUSES AND SURVEYS

CENSUS 1971

Great Britain
Summary Tables (1% Sample)

This volume provides statistics covering demography, economic activity and household composition for Great Britain, England and Wales and Scotland: with some details for regions and conurbations. The figures are estimates based on a 1% sample of the Census returns.

£3.60 net (by post £3.90)

Great Britain
Economic Activity, Part I (100%)

This volume gives the numbers who were in employment, seeking work, students, retired or economically inactive for other reasons in the week before the census. The data is analysed by age for men, women and married women for Great Britain, England and Wales, Scotland, regions and conurbations, subdivisions of regions of England and Wales and planning regions of Scotland.

£1.90 net (by post £2.05)

Cohort Studies

New Developments

This booklet describes new cohort studies which are being developed to study the relationship between events which occur in peoples' lives and factors that directly or indirectly underlie those events. The events concerned are those about which information is routinely collected by OPCS and relate to a sample about 1 per cent of the population.
