CENSUS 1971

**Great Britain
Summary Tables (1% Sample)**

This volume provides statistics covering demography, economic activity and household composition for Great Britain, England and Wales and Scotland: with some details for regions and conurbations. The figures are estimates based on a 1% sample of the Census returns.

£3.60 net (by post £3.90)

**Great Britain
Economic Activity, Part I (100%)**

This volume gives the numbers who were in employment, seeking work, students, retired or economically inactive for other reasons in the week before the census. The data is analysed by age for men, women and married women for Great Britain, England and Wales, Scotland, regions and conurbations, subdivisions of regions of England and Wales and planning regions of Scotland.

1. Changes in presentation

Changes introduced in 1972.

Area of residence. From 1st January 1972 births and deaths relating to persons whose usual residence is stated to be outside England and Wales have been coded to the country stated in that address. Such events will be included in total figures for England and Wales but excluded from any areal sub-divisions. Tables affected by this change are **Tables E, BB and Appendix B6.**

2. Additional tables and data

The following unpublished items are available for reference at the Office of Population Censuses and Surveys, or copies can be supplied on payment:-

- (i) Live births and stillbirths separately by sex, legitimacy and month of occurrence for each region, conurbation and local authority area in England and Wales.
- (ii) Live births and stillbirths separately by place of confinement, age and parity of mother for each county borough and administrative county in England and Wales.

3. Populations

The estimates of population appearing in this volume and described as 'home', 'total' or 'civilian' have the following content:

- Home population* - the population, of all types, actually in England and Wales, distributed by area according to residence.
- Total population* - the *home* population *plus* members of H.M. Forces belonging to England and Wales and serving overseas but *minus* the Forces of other countries temporarily in England and Wales.
- Civilian population* - the *total* population *minus* members of H.M. Forces belonging to England and Wales at home or overseas.

In order not to count either deployment of H.M. Forces between home and overseas stations, or their recruitment or demobilisation, as migration, each intercensal national population estimate starts with the *total* population at the date of the previous estimate. To this is added natural increase and the net result of migration into and out of the civilian population (which may differ slightly from the balance of intending migrants derived from the International Passenger Survey, etc.). This gives the new *total* population. The subtraction from this of all of H.M. Forces regarded as emanating from England and Wales, wherever stationed, gives the new *civilian* population estimate. The addition of non-civilians (whether H.M. Forces or Allied Forces) actually stationed in England and Wales gives the new *home* population estimate. A minor difficulty in equating the difference between two *total* population estimates *minus* the net result of subtracting births from deaths with the precise figure for net migration during the period arises from the fact that provisional figures for births are used at the time population estimates are necessarily made, whereas published figures are usually of actual occurrences. Discrepancies between provisional birth figures and final occurrences are generally allowed for in the estimates for the following year.

The populations of mid-1971 and mid-1972 given in this volume, and used in the calculations, are the provisional estimates of population. These estimates were based upon preliminary figures from the 1971 Census of Population and took into account further census information that had become available by the time they were made. They include estimates of usual residence transfers between areas of enumeration and usual address.

Subsequently revised estimates of population for mid-1971 and mid-1972 have been prepared but they were not available at the time of preparation of this volume. These revised estimates use the final Census resident population as their benchmark, i.e. a census figure of the number of persons usually resident in an area. Also adjustments have been made because of certain deficiencies in the statements of age.

Whilst the effect of the revision upon the male/female ratio is negligible, the overall population estimate for England and Wales at mid-1971 has increased by 39 thousand (0.08%) and that for mid-1972 by 9.4 thousand (0.02%); the age/sex structures of the national and regional estimates are effected by varying amounts. The revised versions of mid-1972 national and regional populations in **Tables A2** and **A4** of this volume are given in **Appendices E1** and **E2**. **Appendix E3** shows the percentage difference between these provisional and revised estimates. These revisions should be borne in mind when considering various tables in this Review that use the provisional estimates of population.

At local authority area level the changes due to revision are mostly small; only 70 areas out of 1,366 had a difference of 2% or more and of these 36 were altered by between 2% and 3%. The remaining 34 areas where the difference is greater than 3% are listed in **Appendix E4**. In only 11 of these 34 areas were the final mid-1972 populations 10,000 or more - that is, most of these large relative differences were based on small populations.

Revisions are being prepared, in the light of the final results of the 1971 Census, of some of the population estimates for 1962 to 1970 but these were not available at the time of preparation of this volume. There is therefore a discontinuity between 1970 and 1971 in population estimates and rates based on these estimates.

4. Births and birth rates

The births recorded and analysed for England and Wales for periods from 1939 onwards are those which occurred during the period.

Before 1972 births and maternities were assigned to the area of the mother's usual residence if that was within England and Wales; if not, to the area of occurrence. From 1st January 1972 a birth to a mother whose usual residence is outside England and Wales is assigned to the country of usual residence. These births are included in total figures for England and Wales but excluded from any sub-divisions of England and Wales. (**Tables E, GG** etc)

National crude birth rates shown in **Tables D1, D2** are calculated by relating birth occurrences (registrations before 1939) to the population of persons, all ages. Home population has been used in all years except 1915 to 1920 and 1940 to 1950 when total population was used. National birth rates per 1,000 women of childbearing ages (from 15 to 44 years of age) are based on total population throughout. The rates in **Table E** are calculated from birth occurrences and home populations (see note 3 above).

Birth rates for the years 1962-70 are subject to small revisions when the revised populations for these years are available (see note 3 above).

5. Deaths and death rates

The deaths recorded (**Tables E** and **SS**) are the total registered (including non-civilians) in the calendar period, the time lag between the date of occurrence and the date of registration being usually only a day or two. In general, deaths are assigned to the area of usual residence of the deceased. In the case of deaths where the usual residence of the deceased was not within England and Wales the method of assignment has been changed: before 1 January 1972 these deaths were assigned to the place of occurrence, but since that date they have been assigned to the country of usual residence of the deceased. Accommodation provided under Parts III or IV of the National Assistance Act, 1948, is regarded as the place of residence of persons dying there. Before 1 January 1958 chronic sick and psychiatric hospitals were similarly treated for this purpose but from that date the method of classification was modified, the main change being that a death in such a hospital is now assigned to the area of occurrence only if the deceased has been there six months or more. If the deceased had been there less than six months the death is transferred to the area of previous usual residence.

In some small areas the numbers of deaths may also have been appreciably affected by the opening, closing or change of use of certain institutions, so that figures may not be comparable with those of earlier years.

In **Table E** the crude death rates are calculated from total deaths and home populations (see note 3 above). The infant mortality rates are based on the live births occurring in the year, and the perinatal mortality rates are calculated from the numbers of infant deaths under one week, plus the numbers of stillbirths, per thousand total live and stillbirths.

6. Area Comparability factors

(a) Births

The crude birth rates for local areas in **Table E** (col. 8) may not be comparable one with another because the populations on which they are based may contain different proportions of women of child-bearing ages. In order to eliminate differences between local birth rates due to this cause a standardising factor, termed an Area Comparability Factor, is calculated. The product of the crude birth rate and this Area Comparability Factor (col. 9 of **Table E**) is a rate which makes allowance for this influence. The ratio of this adjusted rate for England and Wales as a whole is shown in col. 10 of **Table E**.

(b) Deaths

The crude death rates for local areas in **Table E** (col. 14) may not be comparable one with another. In the first place, the population on which they are based may have widely differing structures by sex and age. In order to eliminate differences between local death rates due to this cause a standardising factor, termed an Area Comparability Factor, is calculated. In the second place the populations on which the crude death rates are based may include a disproportionate number of invalids if there are certain types of hospitals in the area. In order to eliminate this difference the Area Comparability Factors are adjusted so that they have the effect of apportioning the deaths and the populations in chronic sick and psychiatric hospitals over all areas of the country according to their non-institutional populations. The product of the crude death rate and this Area Comparability Factor (col. 15 in **Table E**) is a rate which makes allowance for these two influences. The ratio of this adjusted rate to the rate for England and Wales as a whole is shown in col. 16 of **Table E**.

7. Fertility Analyses

All the tables that appear in the **Fertility Analyses** are based upon occurrences with the exception of **Table SS** which is based upon registrations.

One of the changes introduced by part of the Population (Statistics) Act, 1960, which came into operation on 1 January 1961, was that the age of the child's father was required where his name was entered in the register, i.e. where the entry was that of a legitimate birth or of an illegitimate birth registered on the joint information of the parents. The analysis of illegitimate births by father's age in **Table AA(b)**, being thus restricted to those births registered jointly by the parents where the father's age was stated, is therefore incomplete and may be misrepresentative.

The term 'maternity' in these tables is used to denote a pregnancy which has terminated in the birth of one or more live or still born children, and the term 'paternity' a legitimate pregnancy of the man's wife which has terminated in the birth of one or more live or still born children. The maternity record differs from the birth record in that multiple births from a single pregnancy are counted as one maternity, while for the birth record each child born is reckoned as a separate unit. The definition of a stillborn child is given in Section 41 of the Births and Deaths Registration Act, 1953, as follows: 'a child which has issued forth from its mother after the twenty eighth week of pregnancy and which did not at any time after being completely expelled from the mother breathe or show any other signs of life'.

The treatment of 'not stated' cases is explained in note 12.

8. Divorces

The figures in **Table O1** have been obtained from the Lord Chancellor's Department. **Tables P1** to **P7** have been compiled from the records of the Divorce Registry, controlled to the total given by **Table O1**.

9. Register of electors

Table U1, compiled from returns received from Electoral Registration Officers shows the numbers of parliamentary electors on the February 1972 Register for each Parliamentary constituency. The number of votes cast at by-elections held on the

February 1972 Register have been supplied by the Home Office. The area of land, and inland water, in 1971 of each Parliamentary constituency has been obtained from the Ordnance Survey Department.

Tables U2 and U3 are derived from Table U1 for the current and preceding years, so far as they relate to parliamentary electors.

Table V1 which shows the number of local government electors, the total number of councillors on each council, and an analysis of local elections held in 1970, is compiled from returns received from clerks to local councils. Table V2 is derived from the same source.

10. International migration

Tables S1, S2 and S3 show various data derived mainly from the International Passenger Survey, which is conducted by the Office of Population Censuses and Surveys for the Department of Trade and Industry and which obtains information about overseas migration, tourism and the contribution of 'travel' expenditure to the balance of payments. This survey is a stratified random sample of passengers entering and leaving the country on all the principal air and sea routes, excluding certain non-approved ports (e.g. Tyne sea ports, which mainly affect Scandinavia, and United States air bases in East Anglia) as well as traffic with the Irish Republic. The term 'migration' here relates to passengers whose declared intention is to reside in the United Kingdom for at least a year, having lived overseas for at least a year for an immigrant, and vice versa for an emigrant.

On the long air routes 4 per cent of passengers at London Airport and up to 7 per cent at Prestwick are interviewed; one per cent of the outgoing and a third of one per cent of the incoming short air passengers are also interviewed at London Airport. At other airports the percentage sampled varies between a third of one per cent and 2 per cent according to the time and the airport concerned. The sample weights are adjusted for known traffic densities, and appropriate allowance made for traffic not covered. In a two stage sample, cross-channel boats are sampled in proportion to the weight of traffic they are expected to handle, and a pre-determined number of passengers is interviewed on each selected boat. On the long sea routes, every liner or other ship having more than 200 passengers arriving, or more than 100 passengers departing, is covered. One ship in every two of other ships carrying more than 12 passengers on these routes is covered. Nearly 7 per cent of the outgoing and 4 per cent of the incoming passengers are sampled. A larger proportion of passengers leaving this country on the long sea and air routes is sampled in order to provide information about emigration from this country.

The totals obtained by grossing up the sample statistics are subject to sampling error which make the estimates for small categories unreliable.

11. International tables

Information for the completion of Tables W, X, Y and Z has been obtained from United Nations publications and from official sources.

12. 'Not stated' cases

Where a particular item of information on a record is not known or not stated at registration a specific value is assigned during the early stages of computer processing, as follows:

Births

Births for which the age of mother, age of father, year of marriage or the number of previous children is not stated are assigned the value of the appropriate item from the last case with otherwise similar characteristics to be processed. Notes of the number of cases dealt with in this way are included in the relevant tables.

Marriages

Marriages with the age of one of the parties not stated are assigned a value for that age based upon the other party's stated age, adjusted according to the combined marital condition of the parties. Where the ages of both parties are not stated, the values assigned are those appearing on the last of a sub-sample of previous cases with the same combined marital condition.

Divorces

Not stated age at marriage is assigned a value in a manner similar to marriages. Present age is estimated from age at marriage.

13. Changes in boundaries

Areas which have undergone a change in boundary during the year are identified in Table E by a dagger †: for any such area the statistics shown for the current year represent the events assigned to the area within the boundaries as they existed at the date of the event, and the population given in Table E (col. 2), which is used for the calculation of crude birth and death rates, is a weighted average of the mid-year populations of the area as constituted before and after the change. This population figure may therefore differ from any given in Table A4 for the same region, conurbation, etc., which relates to the area as constituted at mid year. No areas were newly created or abolished during 1972. Details of boundary changes are given in Appendix A.

14. Indication of reliability

Rates given as 0 indicate that the actual rate is less than half of a unit. A dash (-) in any cell indicates that there were no events. Where a cell has been left blank no denominator is available. Rates calculated from less than 20 events are distinguished by italic type as a warning to the user that the smallness of the experience may effect their reliability as a measure.

Numbers

If d represents the deaths in an area and p the population in that area, then, if d/p is small, the standard error (s.e.) of d is approximately \sqrt{d} assuming that the deaths are independent of one another. Clearly, the larger the number of deaths the smaller will be the proportionate variability. A deviation either way of twice the s.e. may be expected about once in 20 times. Using this criterion one might expect towns each averaging 20 deaths per year to yield in the same year numbers ranging between 11 and 29 without such differences having any statistical significance. Alternatively it could be said that if 20 deaths were recorded for a town, this number would have a 95 per cent confidence interval of approximately ± 9 , there being a 95 per cent chance that the underlying mortality is represented by a number of deaths within this interval.

If d is thought to be an extreme variation it would be more reliable to use as the standard error not \sqrt{d} but $\sqrt{d'}$ where d' is the number of deaths expected if some standard rate (e.g. the national rate) were applied.

Rates

The appropriate standard error of a death rate when d represents the number of deaths and p the population is

$$\frac{\sqrt{d}}{p} \text{ or } \frac{m}{\sqrt{d}}$$

where m is the death rate. The difference between two local death rates m_1 and m_2 can be regarded as significant only if it amounts to more than twice the standard error of the difference, viz.

$$2\sqrt{\left(\frac{m_1^2}{d_1} + \frac{m_2^2}{d_2}\right)}$$

Before comparisons are made, other known sources of variation (such as differences in the sex and age composition of the population) must be removed. If C is the local death Area Comparability Factor, then mC is to be compared with m' , the national death rate. The s.e. of mC is

$$\sqrt{\left(\frac{m}{p}\right)}$$

and

$$mC \pm 2C \sqrt{\left(\frac{m}{p}\right)}$$

is to be compared with m' . As already indicated, m' can be used instead of m in the calculation of the s.e.; m' has the advantage of itself having only a small sampling error.

15. Abbreviations

- A.C. - administrative county.
- C.B. - county borough.
- L.B. - London borough.
- M.B. - Municipal borough.
- U.D. - urban district.
- R.D. - rural district.
- Greater London - the Greater London Council Area, comprising the City of London (including the Inner and Middle Temple) and the London boroughs.

16. Standard regions

The constitution of the regions of England and Wales used in this volume (with the exception of **Tables F** and **M** where the whole of Dorset has been included in the South West Region) is as follows:-

North	West Midlands	South West
Cumberland Durham Northumberland Westmorland Yorkshire, North Riding	Herefordshire Shropshire Staffordshire Warwickshire Worcestershire	Cornwall Devon Dorset (part) ⁴ Gloucestershire Somerset Wiltshire

19. Urban and rural aggregates

These aggregates comprise (a) the six conurbations combined, (b) the aggregates of urban local authority areas outside the conurbations in three groups according to the size of their resident population at the 1961 Census and (c) the aggregate of rural local authority areas outside the conurbations. Urban areas include boroughs and urban districts as defined by the Local Government Acts, and rural areas are rural districts as similarly defined.

20. Sub-divisions of standard regions

21. Hospital regions

The hospital regions presented in this volume consist of aggregations of entire local authority areas. They are identical with the areas of the regional hospital boards except where boundaries of the latter divide local authority areas. Any such divided local authority area is allocated to the hospital region containing the greater proportion of the population.

Estimates of the population of hospital regions, in which the figures for the parts of divided areas have been allocated to the regions in which they are situated, have been published in the Registrar General's Quarterly Return (see return No. 496 for the fourth quarter of 1972)

* Great Britain only; a census was not taken in Ireland until 1821.

† The figures refer throughout to the area which is now Northern Ireland.

‡ Mid-year estimates; a census was not taken in Northern Ireland and the Irish Republic in 1921 and 1931.

** For these years the estimates for all the United Kingdom are of Total population (for definition see explanatory notes).

†† Census enumerated figure. No estimate was made in the Irish Republic for 1966.

** 1971 and 1972 estimates for England and Wales are based on preliminary results of the 1971 Census. See explanatory note 3 on page ix.

TABLE A5. Total population, projections from 30 June 1972, by sex and age

England and Wales

These projections have been prepared by the Government Actuary's Department in consultation with the Office of Population Censuses and Surveys

Basis: The mid-1972 population estimate takes account of the preliminary results of the 1971 Census. Total population includes members of HM Forces domiciled in the country but who were serving overseas or in another part of the United Kingdom but excludes members of HM Forces and Commonwealth and foreign armed forces present in the country who were not domiciled in it.

Assumptions (1972 Revision)

Deaths: The assumptions about future trends in mortality remain the same as adopted for last year's projection, i.e. steadily declining mortality rates, the rate of decline being dependent on sex and age.

Births: The number of births arising from the assumptions made rise from 710,000 a year (until mid-1974) to 828,000 in 1981/2 - mainly because the present age-specific birth rates are below the level implicit in the previous assumptions and the rates have therefore been assumed to increase over the next decade from their present level to that previously assumed. Thereafter the rates are held constant. Variations in the numbers and age structure of the female population lead to 880,000 births in 1990/1, falling to 861,000 in 1998/9 and then rising to 937,000 in 2011/2.

Migration: A net outward migration has been assumed of 17,000 in the year mid-1972 to mid-1973 rising to 30,000 a year from mid-1981 onwards. These figures include migration to and from other parts of the United Kingdom as well as migration to and from all countries overseas.

Projections involving children not yet born are shown above the dotted lines

- These projections are consistent with and constrained to the Government Actuary's Department 1971-based National Projections.
- The detailed migration assumptions together with a textual commentary on the projection figures are to be found in the Registrar General's Quarterly Return for England and Wales No. 495 for the Quarter ending 30 September 1972.
- These 1971-based Regional projections are provisional, being based on the Preliminary Results of the 1971 Census. They will be revised when the final age/sex structure of the 1971 Census are available, together with the estimates of the inter-regional migration from the same source.
- Consequently the above projections cannot be compared with the 1969-based results which were published as Table A6 in the Registrar General's Statistical Review, 1969, Part II, nor can they be compared with population estimates for the years 1962 to 1970 inclusive which were linked to the results from the 1961 and 1966 Censuses of Population.
- No 1972-based regional projections have been produced.

TABLE B1 Abridged life table, 1972

England and Wales

This abridged life table is constructed from the revised home population, based on the 1971 Census figures and the total deaths in the year 1972, whereas other tables in this volume are based on the provisional home population.

Apart from its use as a basis for calculations of probabilities of death or survival, the life table represents one useful way of providing summary indices of mortality free from peculiarities in the sex and age structure of the population. These summary indices, whether it be the number surviving out of the specified number of births or the expectation of life beyond a specified age, are sex and age standardised. They summarise the individual age death rates for each sex. For this particular purpose the following life table has been constructed from the mortality experience of 1972. Though the functions are summary indices of the mortality of a particular year they will by the same token be sensitive to fluctuations in mortality from one year to another as a result of changes in the weather conditions, irregular incidence of epidemics, etc., and they are not reliable as a basis for calculations of the probabilities of survival over a period of years. Life table functions for use in such computations should be representative of the current level of mortality and should therefore be based on more than one year's experience. For this latter purpose another life table has been constructed based on the three years 1970 to 1972, a larger body of data more representative of the general mortality of recent years; this has been published in the Registrar General's Quarterly Return for the June Quarter, 1973 No. 498.

The column headed *l_x* shows, for each sex, the numbers who would survive to exact age *x* out of 10,000 born who were subject throughout their lives to the recorded age death rates of the period.

Column *o_ex* is the 'expectation of life', that is, the average future lifetime which would be lived by persons aged exactly *x*, if likewise subject to those death rates.

TABLE M. Persons marrying in 1972, ages and conditions

Note. Figures for conurbations, remainders of regions and some standard regions are approximate, relating to groups of registration districts most nearly corresponding to the areas defined in the explanatory notes. The mid-1972 home populations of these groups differ from those of the defined areas by the following percentages:

Tyneside conurbation +8.18
Remainder of North -2.61
West Yorkshire conurbation +4.89
Remainder of Yorks and Humberside -2.75

South East Lancs conurbation +4.25
Merseyside conurbation -8.03
Remainder of North West +0.05
South East -0.63

England and Wales, standard regions,
Wales and conurbations

Remainder of South East -3.77
Outer Metropolitan Area +1.16
South West -2.85

- * Natural increase is excess of births over deaths. Gross reproduction rate is the rate at which the female population is replacing itself. Net reproduction rate as GRR but taking mortality into account.
- † England and Wales - GRR and NRR for years 1881-1885, 1891-1895, 1901-1906 and 1911-1915 are based on three year averages of numbers of births related to Census populations of 1881, 1891, 1901, 1911 to give estimated age-specific fertility rates. For years 1916-1920 and 1921-1925 are five year averages where NRR was originally calculated on interpolated L_x (survival rates) values.
- ‡ Births: England and Wales - occurrences since 1939, registrations prior to that.
Scotland - registrations.
Great Britain equals their sum.
- ** Great Britain - GRR and NRR have been calculated by weighting together England and Wales and Scotland in the proportions 9:1.

³ Including countries on the Mediterranean coast of Africa and the Middle East, but excluding passenger movement to and from the Channel Islands and all day trips.

⁴ Excluding day trips between the Republic and the Isle of Man, and movement across the land frontier between the Republic and Northern Ireland.

TABLE S2. Migration between the United Kingdom and countries overseas
(Excluding the Irish Republic) during 1972

Estimates derived from the International Passenger Survey. See explanatory Note 10. The tables also include details of approximately 26 thousand U.K. and other passport holders from Uganda who were excluded from the I.P.S. sampling arrangements and for whom data were obtained from the Uganda Resettlement board.

1. Table S3(c) relates to civilian migrant movement as an element of change in the 'total' population of the United Kingdom. Deployment of H.M. and Allied Forces between this country and overseas is excluded. Also excluded is a small number of wives and dependants of U.S. Forces entering or leaving the United Kingdom each year by 'non-approved' ports.

2. A migrant is defined as a passenger with a minimum of twelve months' residence in his or her last country of residence who remains for at least a year in the receiving country. The figures of both inward and outward movements therefore cover a number of people spending a limited time in or out of the United Kingdom, e.g. students, doctors, teachers, as well as those moving in or out for permanent settlement.

3. The estimates for the Alien, Commonwealth and British (UK) streams relate to citizenship and are based on the International Passenger Survey, a sample survey of passenger movements between the United Kingdom and overseas countries, but excluding traffic with the Irish Republic, adjusted in the light of other available information such as the statistics collected under the Commonwealth Immigrants Acts.

4. Net immigration due to direct traffic with the Irish Republic may have averaged some 10,000 persons per annum during the 1961-1971 intercensal period.

5. Including United Kingdom passport holders from East Africa from 1967.

* Provisional Adoption Orders, which were introduced on 1st April 1959 (see Adoption Act, 1958, section 53) are included in the total. These Orders confer authority on a person not domiciled in Great Britain to take a child out of this country for adoption.
 † The number of adopted children usually exceeds the number of Adoption Orders because the High Court does not issue a separate Order for each child where an adopter adopts more than one child at the same time.

TABLE U1. Parliamentary electors on the February 1972 Register, with number of votes cast at by-elections held thereon

England and Wales, county and borough constituencies

Note 1. The Register of Electors 1972 was prepared in respect of the qualifying date 10 October 1971, and came into force on 16 February 1972. The figures given relate to the constituencies described in the First Schedule to the Representation of the People Act 1948, or as the case may be, in Orders in Council made under the House of Commons (Redistribution of Seats) Act, 1949. The figures given in columns 6, 7 and 8 relate to persons attaining the age of 18 years after 16 February 1972, and before 16 February 1973, and entitled to vote at elections held on or after their 18th birthday; they are not included in columns 3, 4 and 5.
 2. Peers of the Realm (with certain exceptions) are not entitled to vote at Parliamentary Elections and their number is not included in this table.
 3. In this table the symbol * is used to indicate constituencies in which by-elections have been held during the year, but where a constituency has been altered since the General Election 1970 the by-election will have been for the constituency as at the General Election. Details of the numbers of votes cast are shown at the end of the table.

* In calculating these rates the few live births to women whose stated age and marriage duration implied an age at marriage below the legal minimum of 16 have been excluded.

TABLE MM. Legitimate live births to women married once only, at integral marriage durations (in completed years or months)* by mother's calendar year of marriage, age at marriage, and the number of her previous liveborn children, 1971 to 1972

England and Wales

Note. Cases in which the mother's age, year of marriage or number of previous children were not stated have been included with the stated cases (for method of distribution see explanatory notes).

TABLE QQ(d). Fertility rates by birth order: live births per women married once only by duration and calendar year of marriage and number of previous liveborn children

England and Wales

Notes. This table shows rates which are, in fact, probabilities that a married woman, at a given marriage duration, with n previous live born children would have the $(n + 1)$ th child during the course of the following year. The rates are obtained as follows:

Suppose the number of legitimate live births after n previous births at a given marriage duration in a given year is denoted by M , and the number of married women at that marriage duration in that year is denoted by W . Suppose further, the number of those among W married women who have had n children is denoted by $W(n)$. Then the birth order rate is given by

$$\frac{M}{W} \div \frac{W(n)}{W} = \frac{M}{W(n)}$$

There is a possible source of error in calculating these rates, which arises from the possibility of having more births of a given order taking place than there are women exposed to the risk of having births of that order. This can happen when some women have more than one maternity (resulting in live born children) in any one year and when there is a multiple maternity resulting in more than one live birth. The chance of this error occurring is less than 1 in 20.

Calculation of women at risk: For women married before 1961, the number at each parity was obtained from the 1961 Census results. For those married in 1961 and onwards, the number at each parity was determined by distributing the estimated total number of married women at duration 0 (obtained from Table NN) according to the proportions given in Table QQ(c).

APPENDIX B

Distribution of live births and stillbirths by place of confinement, and age and parity of mother.

In the following tables the categories used for place of confinement are :-

NHS hospital A. Hospitals and homes under the National Health Service (*except* psychiatric hospitals) with beds allocated to G.P. maternity but not obstetrics;

NHS hospital B. Remainder of hospitals and homes under National Health Service (*except* psychiatric hospitals);

Other hospitals. Mainly maternity homes not under the National Health Service;

At home. At the usual place of residence of the mother;

Elsewhere. Places of confinement which include all psychaitric institutions, homes for unmarried mothers, remand homes, reception centres, private houses (other than the mother's usual residence), etc.

For availability of additional tables see explanatory note 2.

OFFICE OF POPULATION
CENSUSES AND SURVEYS

Population Projections 1972-2012 No. 3

This volume presents population projections, based on the 1972 mid-year estimates, for the United Kingdom, Great Britain, England and Wales, Scotland and Northern Ireland, by sex and age; some marital condition projections are included. There is also a detailed discussion of all aspects of the projections, including the derivation of the assumptions, the method used, and the variations from earlier projections.
