## EXPLANATORY NOTES

### 1. New or Recent Changes in Presentation

#### (a) Standard Regions, Conurbations, Urban and Rural Aggregates.

All figures given for regions relate to the Standard Regions whose constitution is set out in Note 15.

Six conurbation areas are distinguished in certain tables. For the constitution and list of conurbations see Note 15.

Urban and Rural Aggregates relate to aggregates of conurbations, and of areas outside conurbations. The latter are sub-divided into (a) Urban Areas with (i) populations of 100,000 and over, (ii) populations of 50,000 and under 100,000 and (iii) populations under 50,000 (for this purpose areas are allocated according to the size of their enumerated population at the 1951 Census) and (b) Rural Districts. "Urban Areas" includes Boroughs and Urban Districts as defined under the Local Government Acts, and Rural Districts are as defined under those Acts.

#### (b) New and Revised Tables

In 1952 a new series of tables was introduced for the fertility analyses. Some of these have been further modified in 1955 and 1956. Details are given in Note 5.

A new marriage table (Table H) was introduced in 1955 and, from 1954, three marriage tables were extended. Table H shows marriage rates by age and marital condition, Tables K and L now show separate figures for divorced persons, while Table N includes a comparison of marriage incidence by calendar months.

Tables relating to the use made of the indexes and registers of births, marriages and deaths, the re-registration of births of legitimated persons and adoption orders made by the courts were modified in 1955 to include information previously published in the Commentary volumes and renumbered. Table T1 was extended to include figures of searches undertaken for Government Departments and numbers of certificates issued from the registers. A new table (Table T2) shows the numbers of different types of certificates issued. Tables T3, T4 and T5 were previously numbered T2, T3 and T4. Table T5, showing relationship between adopters and children adopted, no longer distinguishes the type of court which made the adoption orders.

### 2. Populations

The estimates of population appearing in this volume and described as "home" or "total" populations, have the following content:—

*Home population*—the population, of all types, actually in England and Wales, distributed by area according to residence.

*Total population*—the home population plus members of H.M. Forces belonging to England and Wales and serving overseas but *excluding* the Forces of other countries temporarily in England and Wales.

The mid-1956 estimates of population, both national and local, have been based upon final figures from the full tabulations of the 1951 Census.

The table of population projections shown in Table A5 has already been published in the Registrar General's *Quarterly Return* for England and Wales for the December Quarter, 1956, (No. 432).

### 3. Births

The births recorded and analysed for England and Wales for periods from 1939 onwards are those which occurred during the period. The numbers registered in 1956 are shown in the footnote to Table B.

For the classification by area (Table E), the births have been assigned as in previous years to the home address or area of permanent residence.

### 4. Birth Rates

The national rates shown in Tables C and D are obtained by relating birth occurrences (before 1939, registrations) to the total population, while the rates in Table E are based on birth occurrences and home populations, see Notes 2 and 3 above.

The birth rate area comparability factors and the ratios of the local adjusted birth rates to the national rate shown in columns (9) and (10) of Table E serve a similar purpose to those shown for death rates, as explained in Note 9 below. A commentary upon the factor and its use is given on page 30 of the 1954 *Statistical Review*, Part III, Commentary\*. The factors are based on 1951 Census populations by sex and age with later adjustment for boundary changes, and for changing population structure by sex and age where appreciably affected in the case of rapidly expanding and of contracting areas.

## 5. Fertility Analyses.

The fertility analyses in Tables AA to TT are based on information obtained under the Population (Statistics) Act, 1938, which operated from the 1st July, 1938. Tables AA to QQ and Table TT are based upon birth occurrences. Tables RR and SS are based upon death registrations.

A new tabulation scheme was adopted for 1952 and subsequent years, and a fresh series of tables was introduced in the 1952 volume.

Tables AA to EE are, with a few modifications, similar to the corresponding tables in the previous series. Table FF (previously GG) now includes live and stillbirth rates per 1,000 legitimate maternities. Tables RR, SS and TT correspond to those previously designated VV, XX and YY. The former Table WW is discontinued.

A new table (Table GG) shows birth rates by age of mother for Standard Regions, Conurbations and Urban and Rural Aggregates; it also includes legitimacy, sex and stillbirth proportions which were formerly given in Table HH.

The analysis of legitimate maternities by mother's age, marriage duration and previous liveborn children in Tables HH, II and LL, is confined to maternities to women married once only. Table MM relates to legitimate maternities to women married once only, distinguishing parity, age and year of marriage for successive marriage cohorts.

Tables comparing the fertility of all married women and of those married once only and more than once respectively, have been published in the 1955 *Statistical Review*, Part III, Commentary\*.

Tables JJ and NN show estimates of women married once only, at risk of child-bearing (a) in the calendar year 1956, by current age and marriage duration (Table JJ), and (b) between integral durations (wedding anniversaries†) reached in 1955 and 1956, by calendar year of marriage and year of marriage (Table NN).

There is a fundamental difference between these two tables. Table JJ is needed for the calculation of legitimate maternity rates *per year of risk* (shown in Table KK). It gives the estimated *total number of years of married life* spent in the year at the ages and durations shown, and to each cell of the table a married woman contributes only the fraction of a year which she actually spent at that age and duration in 1956. (Most women contributed to several cells). Table NN is needed for the calculation of legitimate fertility rates *per married woman* (shown in Table OO). It gives the *mean number of women at risk* at the specified durations who were married in the years and at the ages shown. It has been modified from the form used in 1952 to 1955 so as to relate to the integral duration intervals ended in 1956, spanning two calendar years of risk, instead of an integral calendar year of risk spanning two duration intervals.

Table OO has been similarly modified, and in addition adjusted from maternity rates to live birth or fertility rates. It continues Tables 2 (a)—(g) of Appendix A in the 1955 *Statistical Review*, Part III, Commentary\*. Table PP now shows mean family size (liveborn children) at integral durations reached in 1956, and continues Tables 1 (a)—(g) of the same Appendix.

In Tables AA, HH, II, LL and MM, the "not stated" cases have been proportionally distributed and included with the "stated" cases. Table QQ shows the numbers of cases so distributed and the proportions per 10,000 total legitimate maternities. Cases where the number of liveborn, now dead, children was not known by the informant at the registration of the birth have not been treated as "previous children not stated" since the current level of child mortality is sufficiently low to permit it to be assumed without risk of serious error that in these cases there were no such children.

## 6. Marriages

An analysis of marriages by manner of solemnization was included in the 1952 *Statistical Review*, Part II‡. The next analysis will appear in the volume for 1957.

## 7. Marriage Rates

The national marriage rates of Tables C, D and H are based upon total populations while the rates in Table F are based upon home populations, see Note 2.

## 8. Deaths

The deaths recorded (Tables E, RR and SS) are the total registered (i.e., including non-civilians) in the calendar period, the time lag between the date of occurrence and the date of registration being usually only a day or two. They have been assigned to the area of usual residence of the deceased. The definition of usual residence for this purpose was modified in 1953, the main change being that persons dying in hospitals for the chronic sick and in mental and mental deficiency hospitals were in that year regarded as having been resident in the hospital. Such a change with regard to persons dying in accommodation provided under Parts III and IV of the National Assistance Act, 1948, had already been brought into effect during 1952. The method of classification of chronic sick hospitals for these purposes was slightly modified in 1954 and rates for a certain number of smaller areas may not be comparable with those for 1953.

Areas where it is regarded as probable that the number of deaths has been appreciably affected by the *opening, closing or change of use* of certain institutions, so that the figures are not comparable with previous years, have been marked §.

## 9. Death Rates

The general death rates of Table E are based upon total deaths and home populations. The infant mortality rates for the local areas of Table E are based upon combined births of the associated and preceding year to which they relate.

The crude death rates for local areas in Table E (col. 14) may not be comparable one with another for two reasons; the populations on which they are based may have widely differing structures by sex and age, and they may include a disproportionate number of invalids where there are certain types of hospital in the area. Since 1953 all deaths in mental and mental deficiency hospitals and most deaths in hospitals for the chronic sick have been assigned to the area of the hospital whether or not the patients had originally been admitted from that area. This practice increases the death rates for areas containing large populations in those types of hospital and (very slightly) decreases the death rates for areas containing no such population. With a view to eliminating differences between local death rates due to these two causes an area comparability factor is provided for each area in column 15 of the table. The product of the crude death rate multiplied by this factor is a rate which is roughly standardised for sex and age structure and also for the presence or absence in the area of hospitals for the chronic sick or mental or mental deficiency hospitals. A description of the factor as it standardises for sex and age structure is given on page 57 of the 1954 *Statistical Review*, Part III, Commentary\*. In 1956 the area comparability factors as described there have been adjusted so that they also spread the deaths and the populations in chronic sick and mental and mental deficiency hospitals over all areas of the country in proportion to the non-institutional populations.

## 10. Migration

Table S shows various data on migration and balance of civilian passenger movement. Parts (a) and (b) are compiled from Board of Trade returns.

Part (a) shows balance of civilian passenger movement and relates, with certain shown exceptions, to travel by all routes to and from the United Kingdom. Part (b) shows balance of permanent migration and relates to travel by the long sea routes only. The permanent migration balance of part (b) is included in the passenger movement balance of part (a).

In parts (a) and (b) the United Kingdom includes the Irish Republic prior to 1st April, 1923. Inward balances are distinguished by a *plus* sign and outward balances by a *minus* sign.

In part (b) the terms "permanent migration" and "long sea routes" have the following meaning:—

*Permanent migration* — a declared intention by the passenger to reside for a minimum period of twelve months in the country of destination.

*Long sea routes* — excluding travel to and from all ports in Europe, which is taken for this purpose as including all Mediterranean islands, all ports in Turkey and all ports in the U.S.S.R. other than those on the Pacific seaboard.

Part (c) shows the intercensal population balance by migration for England and Wales. This is obtained by deducting the excess of births over deaths, the natural increase, from the intercensal increase of population. Net gains by migration are shown by a *plus* sign and net losses by a *minus* sign.

## 11. Register of Electors

Table U shows the number of parliamentary electors on the February, 1956, Register for each parliamentary constituency as constituted at the date of the general election held on 26th May, 1955. The number of votes cast at by-elections held on the February, 1956, Register and the acreage of each parliamentary constituency are also shown.

The numbers of local government electors are shown in Table V together with an analysis of local elections.

## 12. Changes in Boundaries

Areas which have undergone a change of boundary during the year are identified in Table E by an asterisk(\*); areas created during the year are identified by the sign (†), while areas abolished are indicated by the sign (‡). Statistics shown for the year for such an area relate to the area as constituted in the respective parts of the year before and after the boundary change; in consequence the base population used in Table E for the calculation of birth and death rates, which must be a weighted average of the populations for these two parts of the year, will differ from that included in Part (iii) of the Appendix and Table A4 which relate to the area constituted *after* the boundary change.

\* Obtainable from Her Majesty's Stationery Office, price 8s. net.

### 13. Indication of Significance

Rates based upon less than 20 births or deaths are distinguished by italic type as a warning to the user that the smallness of the experiences may affect their significance. (see page 9 of the 1936 *Statistical Review Text*.)

Rates given as 0 indicate that the rate is less than half the final digit shown. A dash (—) in any column indicates that there were no events.

### 14. Definition of Areas

**London A.C.**—Administrative County of London which consists of the City of London (including the Inner and Middle Temples, and the Metropolitan Boroughs.

**C.B.**—County Borough; **M.B.**—Municipal Borough; **Met.B.**—Metropolitan Borough; **U.D.**—Urban District; **R.D.**—Rural District.

### 15. Standard Regions

The constitution of the Standard Regions of England and Wales used in this Volume is as follows:—

### 16. Conurbations

The conurbation areas used in this volume are those which were agreed in 1950, under the aegis of the Interdepartmental Committee on Social and Economic Research and the Central Statistical Office, for the presentation of official statistics generally\*. They each consist of an aggregation of entire local authority areas and are constituted as follows:—

		<b>Tyneside</b>	
Gateshead C.B. South Shields C.B.	<i>Durham</i> Felling U.D. Hebburn U.D. Jarrow M.B. Whickham U.D.	Newcastle upon Tyne C.B. Tynemouth C.B. Gosforth U.D.	<i>Northumberland</i> Longbenton U.D. Newburn U.D. Wallsend M.B. Whitley Bay M.B.

**TABLE A5.—Total Population, Projections from Mid-year 1956 by Sex and Age.** (These projections have been prepared by the Government Actuary's Department in consultation with the General Register Office on the basis of the under-noted agreed assumptions): } England and Wales

See Explanatory Note 2.

**Basis and Assumptions:—**  
**Basis:** Mid-1956 Estimate of Total Population of England and Wales (including British Armed Forces at home and elsewhere but excluding Allied Forces in this country).  
**Assumptions (1956 Revision):**  
**Mortality:** At ages under 45 death rates declining steadily over the next 25 years until at the end of that period they are about one half of the rates now being experienced. At ages over 45 the assumed rates of decline become progressively smaller as the age advances. It has been assumed that after 25 years the death rates at all ages will remain at the levels then reached.  
**Natality:** In view of the maintenance of the level of the birth rate in the last few years the assumptions made in recent projections have been modified. The revised estimates give annual births averaging 675,000 during the first 15 years, 685,000 during the ensuing 10 years and 665,000 thereafter. (Male/Female ratio 1.06 throughout).  
**Migration:** Nil.  
*Projections involving children yet unborn are shown above the dotted line*

TABLE U.—Parliamentary Electors on the February, 1956, Register, with number of votes cast at By-Elections held thereon, (shown in footnotes).

England and Wales, County and Borough Constituencies

Note (1) The Register of Electors, 1956, was prepared in respect of the qualifying date 10th October, 1955, and came into force on 26th February, 1956. The figures are for constituencies as constituted at the date of the General Election held on 16th May, 1955. The figures given in columns 6, 7 and 8 relate to persons entitled to vote at elections held on or after 2nd October, 1956; they are not included in columns 3, 4 and 5.  
 (2) For constituencies whose boundaries have been altered by Orders in Council made since 26th May, 1955, which become effective at the next General Election, the total electorates which will follow redefinition are shown in footnotes.

TABLE AA.—Maternities and Births of all Types distinguishing legitimacy and in the case of illegitimate births, sex and whether live or stillborn.

Note: The term "Maternity" is used to denote a pregnancy which has terminated in the birth of one or more live or stillborn children; the definition of a stillborn child being that contained in Section 47 of the Births and Deaths Registration Act, 1937. The Maternity record differs from the record in that multiple births from a single pregnancy are counted as one maternity, while for the birth record each child born is recorded as a separate unit.

TABLE II.—Legitimate Maternities to women married once only }  
by mother's age at maternity and marriage duration.

{ England and Wales  
1956 Occurrences

Note.—(i) The classification by marriage duration now presented differs from that of 1951 and earlier years. As the month only and not the day of the mother's marriage is obtained at a birth registration the marriage duration cannot be exactly identified. The assignment procedure is now designed to secure that numbers shown in the table correspond as nearly as possible to the durations to which they are assigned.

(ii) Cases in which the mother's age or year of marriage were not stated (see Table QQ) have been proportionally distributed and included with the stated cases.

(a) Classification by marriage duration and maternity age in single years.

TABLE RR.—Infertility of Deceased Married Women by Certain Causes of Death.

England and Wales  
1956 Registrations

Note.—The columns distinguish deaths according to whether the deceased was reported (a) as having had no children by any husband, i.e. Infertile, (b) as having had children by a husband, i.e. Fertile. Deaths in which the record of fertility was not reported are excluded from the table. An asterisk (\*) denotes that the total number of cases (infertile plus fertile) was less than 50 and that in view of the unreliability of inferences based on small numbers, proportions have not been calculated. Proportions based on between 50—250 cases are shown in italics.

The Registrar General's  
Annual Estimates of the Population  
of England and Wales  
and of  
Local Administrative Areas

An annual publication issued to meet a general demand for the latest figures of populations of local administrative areas, county boroughs, administrative and geographical counties, standard regions and conurbations. The latest estimates of the population of England and Wales as a whole, by sex, by single years of age to age 20 and by five year age-groups thereafter, are also given.

THE REGISTRAR GENERAL'S  
STATISTICAL REVIEW  
OF ENGLAND AND WALES  
FOR 1952

Supplement on Cancer

This volume is concerned with the development and treatment of nearly 85,000 cases of cancer of the Breast (women only), Cervix uteri, Prostate, Stomach, Intestine, Rectum, Lung, and Skin (epithelioma). The data used was obtained between 1945 and 1952 from the National Cancer Registration Scheme. Records of cases registered in the years 1945 to 1947 and followed up for a period of five years form the basis for an analysis of the factors which influence survival.

A STUDY OF THE FREQUENCY OF  
MOVEMENT OF MIGRANTS

This study analyses the movements in 1948-50 of a sample of individuals drawn in 1951 from the National Registration records. It shows the number of moves each made during that period and the length of time which elapsed between each move. The figures are presented by sex, age and region of residence.
